**REGULATIONS – 2015**  
**CHOICE BASED CREDIT SYSTEM**

**PROGRAMME EDUCATIONAL OBJECTIVES:**

Communication is the fastest growing segment of the industry and has been experiencing exponential growth over the last decade. This programme is an advanced level course in the field of Communication Engineering offering a specialization in terms of technology and applications to fulfill the requirements of the industry.

The main program educational objective of the M.E. COMMUNICATION SYSTEMS program is to educate graduates who will develop as ethical, productive and contributing members of society. As they progress academically and later professionally after graduation, our students should be able to do the following:

1. Apply the communication engineering principles based on a solid foundation in signal processing, baseband and band pass communication signal design, radiation systems, electromagnetic, wireless and optical media challenges for transmission and networking and high frequency processing circuits, to solve engineering problems and to address the technological challenges of the future communication needs.
2. Use their engineering foundation for success in
  - a. Technical careers in industry, academia, government or other organizations
  - b. Carrying out indepth doctoral and post-doctoral research in specific area of study
  - c. Careers involving management or entrepreneurship
  - d. Future workplace by being effective engineers or otherwise use the foundation of their technical education to progress in their career.
3. Develop an appreciation for, and an ability to engage in, life-long learning process and use lifelong learning skills to
  - a. Take advantage of professional development opportunities in their disciplines
  - b. Develop new knowledge and skills and pursue new areas of expertise or careers
  - c. Adapt to changing global scenario and workforce trends
4. Apply modern techniques, tools and practices to create and apply technologies to meet the needs of society and engage in professional service by
  - a. Using their engineering background to advance society and to help solve technical and societal problems
  - b. Developing new knowledge and products that will promote sustainable economic development to improve the quality of life
  - c. Promoting the practice of engineering as a source of societal good

**PROGRAMME OUTCOMES:**

Students completing the programme will demonstrate the competence and ability to,

1. Identify, formulate, and solve engineering problems
2. Apply communication engineering principles and design tools and will be well practiced in design skills.
3. Design and conduct experiments, as well as to analyze and interpret data to produce meaningful conclusions and recommendations
4. Apply principles of engineering, basic science, and mathematics to model and analyze components or processes
5. Design a system, component, or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability and sustainability
6. Function on multi-disciplinary teams to solve a problem and will be able to draw from theories, principles, and /or knowledge from other disciplines to help solve the problem
7. Understand the impact of engineering solutions in a global, economic, environmental, and societal context
8. Write reports, communicate research ideas and do oral presentations effectively
9. Recognize the need for, and an ability to engage in life-long learning
10. Understand and follow professional and ethical responsibility.

**MAPPING OF PROGRAMME EDUCATIONAL OBJECTIVES WITH PROGRAMME OUTCOMES:**

A broad relation between the programme objective and the outcomes is given in the following table

PROGRAMME EDUCATIONAL OBJECTIVES	PROGRAMME OUTCOMES

### EMPLOYABILITY ENHANCEMENT COURSES (EEC)

SL. No	COURSE CODE	COURSE TITLE	CATEGORY	CONTACT PERIODS	L	T	P	C
1.		Technical Seminar and Report Writing	EEC	2	0	0	2	1
2.		Project Work Phase I	EEC	12	0	0	12	6
3.		Project Work Phase II	EEC	24	0	0	24	12

**OBJECTIVES:**

- To encourage students to develop a working knowledge of the central ideas of linear algebra;
- To study and understand the concepts of probability and random variable of the various functions;
- To understand the notion of a Markov chain, and how simple ideas of conditional probability and matrices can be used to give a thorough and effective account of discrete-time Markov chains;
- To formulate and construct a mathematical model for a linear programming problem in real life situation;
- Introduce the Fourier Transform as an extension of Fourier techniques on periodic functions and to solve partial differential equations;

**UNIT I LINEAR ALGEBRA****9+3**

Vector spaces – norms – Inner Products – Eigenvalues using QR transformations – QR factorization - generalized eigenvectors – Canonical forms – singular value decomposition and applications - pseudo inverse – least square approximations --Toeplitz matrices and some applications.

**UNIT II ONE DIMENSIONAL RANDOM VARIABLES****9+3**

Random variables - Probability function – moments – moment generating functions and their properties – Binomial, Poisson, Geometric, Uniform, Exponential, Gamma and Normal distributions – Function of a Random Variable.

**UNIT III RANDOM PROCESSES****9+3**

Classification – Auto correlation - Cross correlation - Stationary random process – Markov process -- Markov chain - Poisson process – Gaussian process.

**UNIT IV LINEAR PROGRAMMING****9+3**

Formulation – Graphical solution – Simplex method – Two phase method - Transportation and Assignment Models

**UNIT V FOURIER TRANSFORM FOR PARTIAL DIFFERENTIAL EQUATIONS****9+3**

Fourier transforms: Definitions, properties-Transform of elementary functions, Dirac Delta functions – Convolution theorem – Parseval's identity – Solutions to partial differential equations: Heat equations, Wave equations, Laplace and Poisson's equations.

**TOTAL: 45+15=60 PERIODS****OUTCOMES:**

On successful completion of this course, all students will have developed knowledge and understanding in the fields of linear algebra, probability, stochastic process, linear programming problem and fourier transform.

3. Taha H.A. "Operations Research: An introduction" Ninth Edition, Pearson Education, Asia, New Delhi 2012.
4. Sankara Rao, K. "Introduction to partial differential equations" Prentice Hall of India, pvt, Ltd, New Delhi, 1997.
5. Andrews, L.C. and Philips, R.L. "Mathematical Techniques for engineering and scientists", Printice Hall of India, 2006.
6. O'Neil P.V. "Advanced Engineering Mathematics", (Thomson Asia pvt ltd, Singapore) 2007, Cengage Learning India private limited.

**OBJECTIVES:**

- To enable the student to understand the basic principles of random signal processing , spectral estimation methods and adaptive filter algorithms and their applications.
- To enable the student to understand the different signal detection and estimation methods used in communication system design and the implications of proper synchronization methods for proper functioning of the system.

**UNIT I DISCRETE RANDOM SIGNAL PROCESSING 9**

Discrete Random Processes- Ensemble Averages, Stationary processes, Bias and Estimation, Autocovariance, Autocorrelation, Parseval's theorem, Wiener-Khintchine relation, White noise, Power Spectral Density, Spectral factorization, Filtering Random Processes, Special types of Random Processes – ARMA, AR, MA – Yule-Walker equations.

**UNIT II SPECTRAL ESTIMATION 9**

Estimation of spectra from finite duration signals, Nonparametric methods – Periodogram, Modified periodogram, Bartlett, Welch and Blackman-Tukey methods, Parametric methods – ARMA, AR and MA model based spectral estimation, Solution using Levinson-Durbin algorithm.

**UNIT III ADAPTIVE FILTERS 9**

FIR adaptive filters – Steepest descent method- LMS algorithm, LMS algorithm, RLS adaptive algorithm – Application: channel equalization, noise cancellation, prediction.

**UNIT IV DETECTION AND ESTIMATION 9**

Detection criteria : Bayes detection techniques, MAP, ML,– detection of M-ary signals, Neyman Peason, minimax decision criteria. Estimation: linear estimators, non-linear estimators, Bayes, Kalman, MAP,ML, properties of estimators, phase and amplitude estimation.

**UNIT V SYNCHRONIZATION 9**

Signal parameter estimation, carrier phase estimation, symbol timing estimator, joint estimation of carrier phase and symbol timing.

**TOTAL: 45 PERIODS****OUTCOMES:**

- The student would be able to demonstrate an understanding of the basic principles of random signal processing, spectral estimation methods and adaptive filter algorithms and their applications.
- The student would be able to demonstrate an understanding of the different signal detection and estimation methods used in communication system design and the implications of proper synchronization methods for proper functioning of the system.
- The student would be in a position to apply his knowledge for designing a baseband system addressing the channel impairments.

4. Bernard Sklar and Pabitra Kumar Roy, Digital Communications: Fundamentals & Applications, 2/E, Pearson Education India, 2009
5. John G. Proakis, Masoud Salehi, "Communication Systems Engineering", Prentice Hall, 1994.

**OBJECTIVES:**

- To enhance the students knowledge in the area of various antenna design and to make them understand their radiation mechanism.
- To impart knowledge about the state of art in antenna technology.

**UNIT I ANTENNA FUNDAMENTALS****9**

Introduction –Types of Antennas – Radiation Mechanism – Current distribution on wire antennas – Maxwell's equations - Antenna fundamental parameters - Radiation integrals - Radiation from surface and line current distributions – dipole, monopole, loop antenna; Mobile phone antenna-base station, hand set antenna; Image; Induction ,reciprocity theorem, Balance to unbalance transformer, Review of Antenna Measurements.

**UNIT II ANTENNA ARRAYS****9**

One Dimensional Arrays: Linear array –uniform array, end fire and broad side array, gain, beam width, side lobe level; Linear array synthesis techniques – Binomial and Chebyshev distributions; Two dimensional uniform arrays; smart antennas, switched beam and adaptive arrays, Mutual Coupling in Finite Arrays.

**UNIT III RADIATION FROM APERTURES****9**

Field equivalence principle, Radiation from Rectangular and Circular apertures, Uniform aperture distribution on an infinite ground plane; Babinet's principle, Slot antenna; Horn antenna; Reflector antenna, aperture blockage, and design consideration.

**UNIT IV MICROSTRIP ANTENNA****9**

Radiation Mechanism and Excitation techniques : Microstrip dipole; Patch, Rectangular patch, Circular patch, and Ring antenna – radiation analysis from cavity model; input impedance of rectangular and circular patch antenna; Microstrip array and feed network; Reconfiguration Mechanisms; Computer Aided Design of Microstrip Antennas, Microstrip Reflectarray Antennas.

**UNIT V MODERN ANTENNAS****9**

PIFA – Vivaldi Antennas - UWB Antennas - Antennas in Medicine – Leaky Wave Antennas – Plasma Antennas – Wearable Antennas – RFID Antennas - Automotive antennas, Reconfigurable antennas - Meta materials

**TOTAL:45 PERIODS****OUTCOMES:**

**At the end of the course, the student should be able to:**

- Describe the fundamentals to recent techniques in antenna technology.
- Design and assess the performance of various antennas.

7. Jim R. James, P.S.Hall, "Handbook of Microstrip Antennas" IEE Electromagnetic wave series 28, Volume 2, 1989.

**OBJECTIVES:**

- To understand the role of the communication medium in the design approaches for coding and modulation techniques.
- To know the trade-offs involved in the design of basic and advanced coding and modulation techniques.
- To learn the advanced baseband signal conditioning methods evolved for exploiting the channel and user application characteristics
- To familiarize on the system design approaches.

**UNIT I REVIEW OF DIGITAL MODULATION TECHNIQUES****9**

Base band and band pass communication; Signal space representation, Linear and nonlinear modulation techniques, M-ary modulation techniques; Spectral characteristics of digital modulation, Spread spectrum modulation techniques.

**UNIT II RECEIVERS FOR AWGN AND FADING CHANNELS****9**

Optimum receivers for AWGN channel -Correlation demodulator, matched filter, maximum likelihood sequence detector, envelope detectors for M-ary signals; Characterization of fading multipath channels, RAKE demodulator, Multiuser detection techniques.

**UNIT III MULTICARRIER SYSTEMS****9**

OFDM- Generation of sub-carriers using the IFFT; Guard Time and Cyclic Extension; Windowing; Peak to Average Power reduction schemes; Multicarrier CDMA- System design, Performance parameters.

**UNIT IV TRELLIS CODED MODULATION****9**

Coded modulation for bandwidth-constrained channels-Trellis coded modulation; Set Partitioning, Four –state Trellis-coded modulation with 8-PSK signal constellation, Eight-state Trellis code for coded 8-PSK modulation, Eight-state Trellis for rectangular QAM signal constellations, Decoding methods and implementation issues.

**UNIT V TURBO CODING****9**

Introduction-Turbo Encoder, Turbo Decoder, Iterative Turbo Decoding Principles; Modifications of the MAP Algorithm-The Soft-Output Viterbi Algorithm(SOVA); Turbo Coding for AWGN channels, Turbo Coding for Rayleigh Channels, LDPC Codes.

**TOTAL : 45 PERIODS****OUTCOMES:****At the end of the course, the student should be able to:**

- Demonstrate an understanding of the trade-offs involved in the design of basic and advanced coding and modulation techniques and the advanced baseband signal conditioning methods evolved for exploiting the channel and user application characteristics.
- Analyze the user requirements and the type of channel over which the system has to function.
- Apply the knowledge for designing the baseband signaling waveforms that would address the channel impairments.

6. Sergio Verdu, "Multiuser Detection", Cambridge University Press, 1998.
7. Andrea Goldsmith , "Wireless Communication ", Cambridge Univ. Press, 2006.

**OBJECTIVES:**

- To learn the concepts of wireless communication.
- To know about the various propagation methods, Channel models, capacity calculations multiple antennas and multiple user techniques used in the mobile communication.

**UNIT I WIRELESS CHANNEL PROPAGATION AND MODEL 9**

Propagation of EM signals in wireless channel – Reflection, diffraction and Scattering-free space, two ray. Small scale fading- channel classification- channel models – COST -231 Hata model, Longley-Rice Model, NLOS Multipath Fading Models: Rayleigh, Rician, Nakagami, Composite Fading –shadowing Distributions, Link power budget Analysis.

**UNIT II CAPACITY OF WIRELESS CHANNELS 9**

Capacity in AWGN, capacity of flat fading channel, capacity of frequency selective fading channels.

**UNIT III DIVERSITY 9**

Realization of independent fading paths, Receiver Diversity: selection combining, Threshold Combining, Maximum-ratio Combining, Equal gain Combining. Transmitter Diversity: Channel known at transmitter, channel unknown at the transmitter.

**UNIT IV MIMO COMMUNICATIONS 9**

Narrowband MIMO model, Parallel decomposition of the MIMO channel, MIMO channel capacity, MIMO Diversity Gain: Beam forming, Diversity-Multiplexing trade-offs, Space time Modulation and coding : STBC, STTC, Spatial Multiplexing and BLAST Architectures.

**UNIT V MULTI USER SYSTEMS 9**

Review of Multiple Access Techniques, Scheduling, power control, Uplink and Downlink channel capacity, multiuser diversity, MIMO-MU systems.

**TOTAL : 45 PERIODS**

**OUTCOME:**

**At the end of the course, the student should be able to:**

- Analyze the state of art techniques in wireless communication.
- Describe MIMO Communications
- Review multiple access techniques

**REFERENCES**

**OBJECTIVES:**

- To enable the student to verify the basic principles of random signal processing, spectral estimation methods, wireless and AWGN channel characterization, application of adaptive filter algorithms for communication system design, coding and modulation design, synchronization aspects and the overall baseband system design.
- To design and conduct experiments, as well as to analyze and interpret data to produce meaningful conclusions and match with theoretical concepts.
- To enable the student to appreciate the practical aspects of baseband system design and understand the associated challenges.

Sl. No.	DETAILS OF EXPERIMENT		DETAILS OF EQUIPMENT / INSTRUMENT REQUIRED FOR A BATCH OF 25 STUDENTS	
	Name	Duration	Name	Quantity
1.	Spectral Characterisation of communication signals ( using Spectrum Analyzer)	4	Spectrum Analyzer	2
2.	Wireless Channel simulation and characterization	4	SCILAB/MATLAB, CPU	2
3.	Pathloss Measurement and Characterization of Wireless Channels	4	Wireless transceiver modules	2
4.	Wireless Channel equalizer design using DSP ( ZF / LMS / RLS )	4	DSP kits, CPU	2
5.	Design and analysis of digital modulation techniques on an SDR platform	4	SDR modules, MSO, CPU	1
6.	Carrier and Symbol timing Synchronization using SDR platform	4	SDR modules, CPU	2
7.	OFDM transceiver design using MATLAB/SIMULINK	4	SCILAB/MATLAB, CPU	1
8.	CDMA signal generation and RAKE receiver design using DSP/MATLAB/ SIMULINK	4	SCILAB/MATLAB, CPU	1
9.	Design and Analysis of Spectrum Estimators ( Bartlett , Welch )	4	SCILAB/MATLAB, CPU	1
10.	Simulation of MIMO systems	4	SCILAB/MATLAB, CPU	1
11.	Design and performance analysis of error control encoder and decoder ( Block and Convolutional Codes )	4	SCILAB/MATLAB, CPU	1
12.	Simulation of Turbo coding and SOVA	4	SCILAB/MATLAB, CPU	1

**OUTCOMES:**

1. The student would be able to design and conduct experiments to demonstrate the trade-offs involved in the design of basic and advanced coding and modulation techniques and the advanced baseband signal conditioning methods.
2. The student would be capable of applying communication engineering principles and design tools and will be well practiced in design skills.
3. The student would be able to comprehensively record and report the measured data, write reports, communicate research ideas and do oral presentations effectively.
4. The student would be capable of analyzing and interpreting the experimental measurement data and produce meaningful conclusions.

**OBJECTIVES:**

- To enhance the students knowledge in the area of planar microwave engineering and to make them understand the intricacies in the design of microwave circuits.
- To impart knowledge about the state of art in MIC technology.

**UNIT I INTRODUCTION TO MICROWAVE CIRCUITS 9**

Definitions – Frequency Bands – Lumped versus Distributed Circuits - Behavior of finite length transmission lines – General Characteristics of PC Boards – Transmission Lines on PC Boards – Passives made from Transmission Lines – Resonators - Combiners, Splitters and Couplers

**UNIT II MATCHING NETWORKS AND FILTER DESIGN 9**

Circuit Representation of two port RF/Microwave Networks: Low Frequency Parameters, High Frequency Parameters, Transmission Matrix, ZY Smith Chart, Design of Matching Circuits using Lumped Elements, Matching Network Design using Distributed Elements, Filter design.

**UNIT III AMPLIFIERS AND OSCILLATORS 9**

Amplifiers: Stability considerations in active networks – Gain Consideration in Amplifiers – Noise Consideration in active networks – Broadband Amplifier design – Low Noise Amplifier Design, Oscillators: Oscillator versus Amplifier Design – Oscillation conditions – Design and stability considerations of Microwave Transistor Oscillators.

**UNIT IV MIXERS AND CONTROL CIRCUITS 9**

Mixer Types – Conversion Loss – SSB and DSB Mixers – Design of Mixers: Single Ended Mixers – Single Balanced Mixers - Sub Harmonic Diode Mixers, Microwave Diodes, Phase Shifters – PIN Diode Attenuators

**UNIT V MICROWAVE IC DESIGN AND MEASUREMENT TECHNIQUES 9**

Microwave Integrated Circuits – MIC Materials- Hybrid versus Monolithic MICs – Multichip Module Technology - Fabrication Techniques, Miniaturization techniques, Introduction to SOC, SOP, Test fixture measurements, probe station measurements, thermal and cryogenic measurements, experimental field probing techniques.

Sl. No.	Details of Experiment		Details of Equipment / Instrument Required for a batch of 25 Students	
	Name	Duration	Name	Quantity
1.	Design of Branch line couplers	2	MIC Trainer Kit, MSO	1
2.	Design of Directional couplers	2	MIC Trainer Kit, MSO	1
3.	Design of Power Dividers	2	MIC Trainer Kit, MSO	1
4.	Design of Impedance matching Networks	2	MIC Trainer Kit, MSO	1
5.	Design of Filters	2	MIC Trainer Kit, MSO	1
6.	Stability analysis using ZY Smith chart	2	MIC Trainer Kit, MSO	1
7.	Design of Phase shifters	2	MIC Trainer Kit, MSO	1
8.	Design of Mixers	2	MIC Trainer Kit, MSO	1

**THEORY**

45

**LABORATORY**

15

**L +T: 45+15 = 60 PERIODS**

## OUTCOMES:

At the end of the course, the student should be able to:

- Describe the fundamentals to recent techniques in MIC technology.
- Independently design and assess the performance of various planar configurations.

## OBJECTIVES:

- To enable the student to understand the importance of the backbone infrastructure for our present and future communication needs and familiarize them with the architectures and the protocol stack in use.
- To enable the student to understand the differences in the design of data plane and the control plane and the routing, switching and the resource allocation methods and the network management and protection methods in vogue.
- To expose the student to the advances in networking and switching domains and the future trends.

## UNIT I OPTICAL NETWORK ARCHITECTURES

9

Introduction to Optical Networks; Need for Multilayered Architecture-, Layers and Sub-layers, Spectrum partitioning, Optical Network Nodes, Network Access Stations, Overlay Processor, Logical network overlays, Generalized Multiprotocol Label Switching.

## UNIT II NETWORK CONNECTIONS

9

Connection Management and Control; Static Networks, Wavelength Routed Networks; Linear Light wave networks; Logically Routed Networks; Routing and Wavelength Assignment , Traffic Grooming in Optical Networks.

## UNIT III OPTICAL NETWORK SURVIVABILITY

9

Protection and Restoration Objectives, Fault Protection and Restoration Techniques in the Logical Layer - Point-to-Point Systems, SONET Self-Healing Rings, Interconnection Techniques, Architectures with Arbitrary Mesh Topologies ,Optical-Layer Protection: Point-to-Point and Ring Architectures, Mesh Architectures, Survivability Techniques for Multicast Connections.

**UNIT IV OPTICAL PACKET SWITCHED NETWORKS 9**  
 Optical Packet-Switched Network Architectures, Contention Resolution, OPS Enabling Technologies, Optical Burst Switching, Contention Resolution in OBS Networks, Optical Label Switching, All-Optical Label Swapping, Contention Resolution in OLS.

**UNIT V NETWORK PERFORMANCE AND FUTURE TRENDS 9**  
 Performance Impairments in an Optical Network Environment, Performance Evaluation: Methodology and Case Studies, The Passive Optical Networks, Metropolitan Area Networks, Long-Haul and Ultra Long-Haul Networks, Introduction to Software Defined Networking.

**TOTAL: 45 PERIODS**

**OUTCOMES:**

**At the end of the course, the student should be able to:**

- Use the backbone infrastructure for our present and future communication needs
- Discuss the architectures and the protocol stack in use.
- Compare the differences in the design of data plane, control plane, routing, switching, resource allocation methods, network management and protection methods in vogue.
- Describe the advances and recent trends in the networking and switching approaches.

**CU7201 ADVANCED WIRELESS NETWORK L T P C**  
**3 0 0 3**

**OBJECTIVES:**

- To understand the working of WI-fi, 3G systems such as UMTS, CDMA 2000
- To learn 4G networks
- To know about ad hoc and sensor network
- To learn about WLAN, WWAN, Wimax and LTE

**UNIT I WIRELESS LOCAL AREA NETWORKS 9**  
 Introduction to wireless LANs - IEEE 802.11 WLANs - Physical Layer- MAC sublayer- MAC Management Sublayer- Wireless ATM - HIPERLAN- HIPERLAN-2

**UNIT II 3G OVERVIEW & 2.5G EVOLUTION 9**  
 Migration path to UMTS, UMTS Basics, Air Interface, 3GPP Network Architecture, CDMA2000 overview- Radio and Network components, Network structure, Radio network, TD-CDMA, TD-SCDMA.

**UNIT III ADHOC & SENSOR NETWORKS 9**  
 Characteristics of MANETs, Table-driven and Source-initiated On Demand routing protocols, Hybrid protocols, Wireless Sensor networks- Classification, MAC and Routing protocols.

**UNIT IV INTERNETWORKING BETWEEN WLANS AND 3G WWANS 9**  
Internetworking objectives and requirements, Schemes to connect WLANs and 3G Networks, Session Mobility, Internetworking Architectures for WLAN and GPRS, System Description, Local Multipoint Distribution Service, Multichannel Multipoint Distribution system.

**UNIT V 4G & BEYOND 9**  
4G features and challenges, Technology path, IMS Architecture, WiMAX, LTE, Convergent Devices, 4G technologies, Advanced Broadband Wireless Access and Services, Multimedia, MVNO.

**TOTAL : 45 PERIODS**

**OUTCOME:**

**At the end of the course, the student should be able to:**

- Analyze different routing techniques in ad hoc and sensor network
- Demonstrate internetworking between different wireless networks
- Describe 4G features and challenges

**CU7251**

**WIRELESS TRANSCEIVER DESIGN**

**L T P C**  
**3 0 0 3**

**OBJECTIVE:**

- To enable the student to understand the intricacies of RF system design using behavior models of the subsystems present in the transceivers

**UNIT I FUNDAMENTALS OF SYSTEM DESIGN 9**  
Linear systems and transformation, Non-linear system representation, Noise and Random process, elements of Digital base band system: Sampling, jitter, modulation techniques, pulse shaping, error probability detection,

**UNIT II RADIO ARCHITECTURES AND DESIGN CONSIDERATIONS 9**  
Superheterodyne architecture, direct conversion architecture, Low IF architecture, band-pass sampling radio architecture

**UNIT III RECEIVER SYSTEM ANALYSIS AND DESIGN 9**  
Sensitivity and noise figure of receiver, intermodulation characteristics, single tone desensitization, adjacent channel selectivity and blocking characteristics, receiver dynamic range and AGC system, system design and performance evaluation

**UNIT IV TRANSMITTER SYSTEM ANALYSIS AND DESIGN 9**  
Transmission power and spectrum, modulation accuracy, adjacent and alternate channel power, noise emission.

**UNIT V CASE STUDY 9**  
Multimode and multiband superheterodyne transceiver: selection of frequency plan, receiver system and transmitter system design - Direct conversion transceiver: receiver system and transmitter system design.

**TOTAL: 45 PERIODS**

**OUTCOMES:**

**At the end of the course, the student should be able to:**

- Design RF system for a given specification
- Discuss the abnormalities present in the transceiver architectures
- Estimate the system performance utilizing the models.

**REFERENCES:**

1. Qizheng Gu, "RF System Design of Transceivers for Wireless Communications", Springer, 2005

**CU7211**

**RF, OPTICAL AND NETWORKS LABORATORY**

**L T P C  
0 0 4 2**

**OBJECTIVES:**

- To verify the basic principles and design aspects involved in high frequency bandpass communication system components design
- To know the performance parameters for the components and the overall system.
- To appreciate the practical aspects of bandpass system design
- To understand the associated link power and risetime budgeting challenges.
- To understand the basics of communication protocol design for different functionalities
- To learn the different high frequency system and communication network design tools
- To design and conduct experiments, as well as to analyze and interpret data to produce meaningful conclusions and match with theoretical concepts.

## LIST OF EXPERIMENTS

Sl. No.	Details of Experiment		Details of Equipment / Instrument Required for a batch of 25 Students	
	Name	Duration	Name	Quantity
1.	Measurement of Transmission line parameters	4	Network Analyzer	1
2.	Design and characterization of Antennas	8	ADS/IE3D/HFSS , CPU	2
3.	LNA / Mixer / VCO design and characterization	8	ADS/IE3D/HFSS , CPU	2
4.	Determination of Maximum bit rate of a digital fiber optic link	4	Digital Fiber Optic Link, MSO	1
5.	Signal transmission and reception using WDM and spectral characterization	4	WDM Module, Optical Spectrum Analyzer	1
6.	Characterization of Fiber Bragg Grating Filter (Reflectivity, Insertion loss & Crosstalk)	4	WDM Module with circulator, FBG and photo-detectors , MSO	1
7.	Simulation and performance evaluation of MAC protocols for wired and wireless networks	4	SDR/QUALNET /GLOMOSIM / NS2 , CPU	1
8.	Simulation and performance evaluation of Routing protocols for wired and wireless networks	4	QUALNET /GLOMOSIM / NS2 , CPU	1
9.	Simulation and performance evaluation of Cellular network technologies in terms of Blocking Probability and Spectral Efficiency	4	QUALNET /GLOMOSIM / NS2 , CPU	1
10.	Simulation and performance evaluation of Wireless Sensor Network technologies in terms of Throughput and Energy Efficiency ( QUALNET /GLOMOSIM / NS2 )	4	QUALNET /GLOMOSIM / NS2 , CPU	1

### OUTCOMES:

**At the end of the course, the student should be able to:**

- Given the user requirements and the type of channel over which the system has to function the student would be in a position to apply the knowledge to identify a suitable architecture and systematically design an RF system or a communication network.
- The student would be able to design and conduct experiments to demonstrate the trade-offs involved in the design of bandpass systems as well as high speed communication networks.
- The student would be capable of applying communication engineering principles and design tools and will be well practiced in design skills.
- The student would be able to comprehensively record and report the measured data, and would be capable of analyzing and interpreting the experimental measurement data and produce meaningful conclusions.

**OBJECTIVES:**

- To enable the student to understand the basic principles of sensors and actuators, materials and fabrication aspects of MEMS and Microsystems.
- To make the student familiar with the mechanical and the electrostatic design and the associated system issues.
- To introduce the student to the different MEMS applications , the design basics, the design tools and the performance issues.

**UNIT I INTRODUCTION TO MEMS 9**

MEMS and Microsystems, Miniaturization, Typical products, Micro sensors, Micro actuation, MEMS with micro actuators, Microaccelerometers and Micro fluidics, MEMS materials, Micro fabrication

**UNIT II MECHANICS FOR MEMS DESIGN 9**

Elasticity, Stress, strain and material properties, Bending of thin plates, Spring configurations, torsional deflection, Mechanical vibration, Resonance, Thermo mechanics – actuators, force and response time, Fracture and thin film mechanics.

**UNIT III ELECTRO STATIC DESIGN AND SYSTEM ISSUES 9**

Electrostatics: basic theory, electro static instability. Surface tension, gap and finger pull up, Electro static actuators, Comb generators, gap closers, rotary motors, inch worms, Electromagnetic actuators. bistable actuators. Electronic Interfaces, Feed back systems, Noise , Circuit and system issues,

**UNIT IV MEMS APPLICATION 9**

Case studies – Capacitive accelerometer, Peizo electric pressure sensor, Microfluidics application, Modeling of MEMS systems, CAD for MEMS.

**UNIT V INTRODUCTION TO OPTICAL AND RF MEMS 9**

Optical MEMS, - System design basics – Gaussian optics, matrix operations, resolution. Case studies, MEMS scanners and retinal scanning display, Digital Micro mirror devices. RF Memes – design basics, case study – Capacitive RF MEMS switch, performance issues.

**TOTAL : 45 PERIODS****OUTCOMES:**

- The student would be able to demonstrate an understanding of the different aspects of microsystem design.
- Given the user requirements and the functionality the student would be in a position to apply his knowledge for identifying a suitable MEMS structure, material and fabrication procedure.
- The student would be capable of applying his knowledge and design tools and will be well practiced in design skills.

5. Tai Ran Hsu, " MEMS & Micro systems Design and Manufacture" Tata McGraw Hill, New Delhi, 2002. Liu, "MEMS", Pearson education, 2007.

**OBJECTIVES:**

- To enable the student to understand the basic principles of operation of optical system components, the different network architectures and issues associated with network design.
- To enable the student to understand the benefits of coherent system and the limitations and challenges in practical implementation.
- To enable the student to understand the differences in the design of TDM and CDM systems when implemented in the optical domain and the challenges involved.

**UNIT I OPTICAL SYSTEM COMPONENTS AND NETWORK DESIGN 9**

Optical System Components – MZIM, Multiplexers; filters; switches; wavelength converters; optical amplifiers – EDFA, Raman Amplifiers and hybrid; Transmission system Engineering - System Model, Aimer penalty – transmitter, receiver, cross talk, dispersion compensation, wavelength stabilization, FWM.

**UNIT II COHERENT SYSTEMS 9**

Basic principles of Coherent detections – Practical constraints – Injection laser line width state of polarization, local oscillator power, fiber limitations; Modulation formats – ASK, FSK, PSK, DPSK and polarization shift keying (POL SK); Demodulation schemes – Homodyne, Heterodyne - Synchronous and Non synchronous detection; Comparison; Carrier recovery in Coherent detection.

**UNIT III OPTICAL NETWORK ARCHITECTURES 9**

Introduction: First Generation optical networks –SONET / SDH Network, Second Generation (WDM) Optical Networks – Broad Cast and select, wavelength routing architectures – Media – Access Control protocols.

**UNIT IV OPTICAL TDM AND SOLITON 9**

Optical Time division Multiplexing – Int Interleaving, Packet Interleaving – Multiplexer and Demultiplexers; AND Gates – Non linear optical loop Mirror, Soliton – trapping AND Gate, Synchronization.

**UNIT V OPTICAL CDMA 9**

Prime codes and its properties , Generalized and Extended prime codes, Experimental demonstration of Optical CDMA, Synchronization of Optical CDMA Networks, Multiwavelength Optical CDMA Networks.

**TOTAL : 45 PERIODS****OUTCOMES:**

- The student would be able to demonstrate an understanding of the differences and challenges involved in the design of optical systems and networks.
- The student would be in a position to apply his knowledge for designing a fiber optic system addressing the channel impairments.
- The student would be familiar with the architectures and the protocol stack in use in optical networks and would be able to identify a suitable backbone infrastructure for our present and future communication needs.

**OBJECTIVES:**

- To enable the student to understand the basic characteristics of multimedia components and the different methods for compressing audio, video, text and images.
- To expose the students to the challenges of IP based transport and the solution approaches considering the example case of VoIP technology.
- To enable the student to understand the different networking aspects with reference to multimedia transmission.

**UNIT I MULTIMEDIA COMPONENTS****9**

Introduction - Multimedia skills - Multimedia components and their characteristics - Text, sound, images, graphics, animation, video, hardware.

**UNIT II AUDIO AND VIDEO COMPRESSION****9**

Audio compression-DPCM-Adaptive PCM –adaptive predictive coding-linear Predictive coding-code excited LPC-perpetual coding Video compression –principles-H.261-H.263-MPEG 1, 2, 4.

**UNIT III TEXT AND IMAGE COMPRESSION****9**

Compression principles-source encoders and destination encoders-lossless and lossy compression-entropy encoding –source encoding -text compression –static Huffman coding dynamic coding –arithmetic coding –Lempel ziv-welsh Compression-image compression .

**UNIT IV VOIP TECHNOLOGY****9**

Basics of IP transport, VoIP challenges, H.323/ SIP –Network Architecture, Protocols, Call establishment and release, VoIP and SS7, Quality of Service- CODEC Methods-VOIP applicability.

**UNIT V MULTIMEDIA NETWORKING****9**

Multimedia networking -Applications-streamed stored and audio-making the best Effort service-protocols for real time interactive Applications-distributing multimedia-beyond best effort service-secluding and policing Mechanisms-integrated services-differentiated Services-RSVP.

**TOTAL : 45 PERIODS****OUTCOMES:**

- The student would be able to demonstrate an understanding of the challenges involved in multimedia signal processing and their transmission.
- The student would be in a position to apply his knowledge for identifying a suitable strategy for compression and communication based on the signal characterization and its needs.

7. Ranjan Parekh, "Principles of Multimedia", TMH, 2006.

**OBJECTIVES:**

- To provide an introduction to basic concepts and methodologies for digital image processing.
- To develop engineering skills and intuitive understanding of the most important concepts, techniques and algorithms for digital image processing.
- To understand the general processes of image acquisition, storage, enhancement, segmentation, representation and description.
- To implement filtering and enhancement algorithms for monochrome as well as color images.
- To appreciate the challenges and understand the principles and applications of visual pattern recognition.

**UNIT I DIGITAL IMAGE FUNDAMENTALS 9**

Elements of digital image processing systems, Digital Camera working principles, Elements of visual perception, brightness, contrast, hue, saturation, Mach Band effect, Image sampling, Quantization, Dither, Two dimensional mathematical preliminaries.

**UNIT II IMAGE TRANSFORMS 9**

1D DFT, 2D transforms - DFT, DCT, Discrete Sine, Walsh, Hadamard, Slant, Haar, KLT, SVD, Wavelet transform.

**UNIT III IMAGE ENHANCEMENT AND RESTORATION 9**

Spatial domain filtering, intensity transformations, contrast stretching, histogram equalization, smoothing filters, sharpening filters, noise distributions, mean filters, order statistics filters. Image restoration - degradation model, Unconstrained and Constrained restoration, Inverse filtering-removal of blur caused by uniform linear motion, Wiener filtering, Geometric transformations-spatial transformations, Gray-Level interpolation.

**UNIT IV IMAGE SEGMENTATION AND MORPHOLOGY 9**

Image segmentation - Edge detection, Edge linking and boundary detection, Region growing, Region splitting and Merging, Image Recognition - Patterns and pattern classes, Matching by minimum distance classifier, Matching by correlation, **Morphological Image Processing** - Basics, SE, Erosion, Dilation, Opening, Closing, Hit-or-Miss Transform, Boundary Detection, Hole filling, Connected components, convex hull, thinning, thickening, skeletons, pruning, Geodesic Dilation, Erosion, Reconstruction by dilation and erosion.

**UNIT V IMAGE COMPRESSION 9**

Need for data compression, Huffman, Run Length Encoding, Shift codes, Arithmetic coding, Vector Quantization, Block Truncation Coding, Transform coding, JPEG, MPEG.

**TOTAL: 45 PERIODS****OUTCOMES:**

- Develop an overview of the field of image processing.
- Outline and implement the fundamental algorithms
- Gain experience in applying image processing algorithms to real problems

**CU7004**

**COMMUNICATION NETWORK SECURITY**

**L T P C  
3 0 0 3**

**OBJECTIVES:**

- To make the student understand the importance and goals of communication network and information security and introduce him to the different types of attacks.
- To expose the student to the different approaches to handling security and the algorithms in use for maintaining data integrity and authenticity.
- To enable the student to appreciate the practical aspects of security features design and their implementation in wired and wireless internetworking domains.

**UNIT I INTRODUCTION ON SECURITY 9**

Security Goals, Types of Attacks: Passive attack, active attack, attacks on confidentiality, attacks on Integrity and availability. Security services and mechanisms, Techniques: Cryptography, Substitution Ciphers, Transposition Ciphers, Stream and Block Ciphers- Steganography- Revision on Mathematics for Cryptography.

**UNIT II SYMMETRIC & ASYMMETRIC KEY ALGORITHMS 9**

Data Encryption Standards (DES), Advanced Encryption Standard (AES), RC4, principle of asymmetric key algorithms, RSA Cryptosystem

**UNIT III INTEGRITY, AUTHENTICATION AND KEY MANAGEMENT 9**

Message Integrity, Hash functions: **SHA 512, Whirlpool**, Digital signatures: Digital signature standards. Authentication: Entity Authentication: Biometrics, Key management Techniques.

**UNIT IV NETWORK SECURITY, FIREWALLS AND WEB SECURITY 9**

Introduction on Firewalls, Types of Firewalls, Firewall Configuration and Limitation of Firewall. IP Security Overview, IP security Architecture, authentication Header, Security payload, security associations, Key Management. E-mail security: PGP, MIME,S/MIME. Web security requirement, secure sockets layer, transport layer security, secure electronic transaction, dual signature

**UNIT V WIRELESS NETWORK SECURITY 9**

Security Attack issues specific to Wireless systems: Worm hole, Tunneling, DoS. WEP for Wi-Fi network, Security for Broadband networks: Secure Ad hoc Network, Secure Sensor Networks

**TOTAL : 45 PERIODS**

**OUTCOMES:**

- The student would be able to demonstrate an understanding of the ways in which communication network security may get compromised and the basic principles of security algorithm design.
- The student would be able to implement and analyse the different algorithms and compare their performances.
- The student would be in a position to apply his knowledge for designing or modifying existing algorithms and implementing them atleast by simulation.

**CU7009**

**NETWORK ROUTING ALGORITHMS**

**L T P C**  
**3 0 0 3**

## OBJECTIVES:

- To expose the students to the layered architecture for communication networks and the specific functionality of the network layer.
- To enable the student to understand the basic principles of routing and the manner this is implemented in conventional networks and the evolving routing algorithms based on Internetworking requirements, optical backbone and the wireless access part of the network.
- To enable the student to understand the different routing algorithms existing and their performance characteristics.

## UNIT I INTRODUCTION

**7**

ISO OSI Layer Architecture, TCP/IP Layer Architecture, Functions of Network layer, General Classification of routing, Routing in telephone networks, Dynamic Non hierarchical Routing (DNHR), Trunk status map routing (TSMR), real-time network routing (RTNR), Distance vector routing, Link state routing, Hierarchical routing.

## UNIT II INTERNET ROUTING

**10**

Interior protocol : Routing Information Protocol (RIP), Open Shortest Path First (OSPF), Bellman Ford Distance Vector Routing. Exterior Routing Protocols: Exterior Gateway Protocol (EGP) and Border Gateway Protocol (BGP). Multicast Routing: Pros and cons of Multicast and Multiple Unicast Routing, Distance Vector Multicast Routing Protocol (DVMRP), Multicast Open Shortest Path First (MOSPF), MBONE, Core Based Tree Routing.

## UNIT III ROUTING IN OPTICAL WDM NETWORKS

**10**

Classification of RWA algorithms, RWA algorithms, Fairness and Admission Control, Distributed Control Protocols, Permanent Routing and Wavelength Requirements, Wavelength Rerouting- Benefits and Issues, Lightpath Migration, Rerouting Schemes, Algorithms- AG, MWPG.

## UNIT IV MOBILE - IP NETWORKS

**9**

Macro-mobility Protocols, Micro-mobility protocol: Tunnel based : Hierarchical Mobile IP, Intra domain Mobility Management, Routing based: Cellular IP, Handoff Wireless Access Internet Infrastructure (HAWAII).

**UNIT V MOBILE AD –HOC NETWORKS****9**

Internet-based mobile ad-hoc networking communication strategies, Routing algorithms – Proactive routing: destination sequenced Distance Vector Routing (DSDV), Reactive routing: Dynamic Source Routing (DSR), Ad hoc On-Demand Distance Vector Routing (AODV), Hybrid Routing: Zone Based Routing (ZRP).

**TOTAL : 45 PERIODS****OUTCOMES:**

- Given the network and user requirements and the type of channel over which the network has to operate, the student would be in a position to apply his knowledge for identifying a suitable routing algorithm , implementing it and analyzing its performance.
- The student would also be able to design a new algorithm or modify an existing algorithm to satisfy the evolving demands in the network and by the user applications.

**CU7011****SATELLITE COMMUNICATION****L T P C  
3 0 0 3****OBJECTIVES:**

- To enable the student to understand the necessity for satellite based communication, the essential elements involved and the transmission methodologies.
- To enable the student to understand the different interferences and attenuation mechanisms affecting the satellite link design.
- To expose the student to the advances in satellite based navigation, GPS and the different application scenarios.

**UNIT I ELEMENTS OF SATELLITE COMMUNICATION****9**

Satellite Systems, Orbital description and Orbital mechanics of LEO, MEO and GSO, Placement of a Satellite in a GSO, Antennas and earth coverage, Altitude and eclipses, Satellite drift and station keeping, Satellite – description of different Communication subsystems, Bandwidth allocation.

**UNIT II SATELLITE SPACE SEGMENT AND ACCESS****9**

Introduction; attitude and orbit control system; telemetry, tracking and command; power systems, communication subsystems, antenna subsystem, equipment reliability and space qualification, Multiple Access: Demand assigned FDMA - spade system - TDMA - satellite switched TDMA – CDMA.

**UNIT III      SATELLITE LINK DESIGN      9**

Basic link analysis, Interference analysis, Rain induced attenuation and interference, Ionospheric characteristics, Link Design: System noise temperature and G/T ratio, Downlink and uplink design, C/N, Link Design with and without frequency reuse, Error control for digital satellite link.

**UNIT IV      SATELLITE NAVIGATION AND GLOBAL POSITIONING SYSTEM      9**

Radio and Satellite Navigation, GPS Position Location Principles of GPS Receivers and Codes, Satellite Signal Acquisition, GPS Receiver Operation and Differential GPS.

**UNIT V      APPLICATIONS      9**

Satellite Packet Communications , Intelsat series, INSAT series, VSAT Systems: Network architectures , access control protocols, earth station engineering, antennas , link margins, system design procedure , mobile satellite services, Satellite Phones, INMARSAT, Remote Sensing, Satellite and Cable Television, DBS (DTH).

**TOTAL : 45 PERIODS**

**OUTCOMES:**

- The student would be able to demonstrate an understanding of the basic principles of satellite orbits, placement and control, satellite link design and the communication system components.
- The student would be able to demonstrate an understanding of the different communication, sensing and navigational applications of satellite and their implementation.

**CU7012      TELECOMMUNICATION SYSTEM MODELING AND SIMULATION      L T P C  
3 0 0 3**

**OBJECTIVES:**

- To enable the student to understand the various aspects of simulation methodology and performance, appreciate the significance of selecting sampling frequency and modelling different types of signals and processing them.
- To expose the student to the different simulation techniques, their pros and cons and enable him to understand and interpret results using case studies.

**UNIT I      SIMULATION METHODOLOGY      8**

Introduction, Aspects of methodology, Performance Estimation, Simulation sampling frequency, Low pass equivalent simulation models for bandpass signals, Multicarrier signals, Non-linear and time-varying systems, Post processing – Basic graphical techniques and estimations.

<b>UNIT II</b>	<b>RANDOM SIGNAL GENERATION &amp; PROCESSING</b>	<b>8</b>
	Uniform random number generation, Mapping uniform random variables to an arbitrary pdf, Correlated and Uncorrelated Gaussian random number generation, PN sequence generation, Random signal processing, Testing of random number generators.	
<b>UNIT III</b>	<b>MONTE CARLO SIMULATION</b>	<b>9</b>
	Fundamental concepts, Application to communication systems, Monte Carlo integration, Semianalytic techniques, Case study: Performance estimation of a wireless system.	
<b>UNIT IV</b>	<b>ADVANCED MODELS &amp; SIMULATION TECHNIQUES</b>	<b>10</b>
	Modeling and simulation of non-linearities : Types, Memoryless non-linearities, Non-linearities with memory, Modeling and simulation of Time varying systems : Random process models, Tapped delay line model, Modelling and simulation of waveform channels, Discrete memoryless channel models, Markov model for discrete channels with memory.	
<b>UNIT V</b>	<b>EFFICIENT SIMULATION TECHNIQUES</b>	<b>10</b>
	Tail extrapolation, pdf estimators, Importance Sampling methods, Case study: Simulation of a Cellular Radio System.	

**TOTAL : 45 PERIODS**

**COURSE OUTCOMES:**

- The student would be able to mathematically model a physical phenomena and simulate the phenomena so as to depict the characteristics that may be observed in a real experiment.
- The student would be in a position to apply his knowledge of the different simulation techniques for designing a communication system or channel and show the performance so as to match a realistic scenario.

<b>CU7013</b>	<b>HIGH SPEED SWITCHING ARCHITECTURES</b>	<b>L T P C</b>
		<b>3 0 0 3</b>

**OBJECTIVES:**

- To enable the student to understand the basics of switching technologies and their implementation LANs, ATM networks and IP networks.
- To enable the student to understand the different switching architectures and queuing strategies and their impact on the blocking performances.
- To expose the student to the advances in packet switching architectures and IP addressing and switching solutions and approaches to exploit and integrate the best features of different architectures for high speed switching.

<b>UNIT I</b>	<b>LAN SWITCHING TECHNOLOGY</b>	<b>9</b>
	Switching Concepts, LAN Switching, switch forwarding techniques - cut through and store and forward, Layer 3 switching, Loop Resolution, Switch Flow control, virtual LANs.	

<b>UNIT II</b>	<b>ATM SWITCHING ARCHITECTURES</b>	<b>9</b>
Blocking networks - basic - and- enhanced banyan networks, sorting networks - merge sorting, re-arrangeable networks - full-and- partial connection networks, non blocking networks - Recursive network construction, comparison of non-blocking network, Switching with deflection routing - shuffle switch, tandem banyan switch.		
<b>UNIT III</b>	<b>QUEUES IN ATM SWITCHES</b>	<b>9</b>
Internal Queueing -Input, output and shared queueing, multiple queueing networks – combined Input, output and shared queueing - performance analysis of Queued switches.		
<b>UNIT IV</b>	<b>PACKET SWITCHING ARCHITECTURES</b>	<b>9</b>
Architectures of Internet Switches and Routers- Bufferless and buffered Crossbar switches, Multi-stage switching, Optical Packet switching; Switching fabric on a chip; Internally buffered Crossbars.		
<b>UNIT V</b>	<b>IP SWITCHING</b>	<b>9</b>
Addressing model, IP Switching types - flow driven and topology driven solutions, IP Over ATM address and next hop resolution, multicasting, Ipv6 over ATM.		

**TOTAL : 45 PERIODS**

**OUTCOMES:**

- The student would be able to identify suitable switch architectures for a specified networking scenario and demonstrate its blocking performance.
- The student would be in a position to apply his knowledge of switching technologies, architectures and buffering strategies for designing high speed communication networks and analyse their performance

<b>AP7082</b>	<b>SIGNAL INTEGRITY FOR HIGH SPEED DESIGN</b>	<b>L T P C</b>
		<b>3 0 0 3</b>

**OBJECTIVES:**

- To identify sources affecting the speed of digital circuits.
- To introduce methods to improve the signal transmission characteristics

<b>UNIT I</b>	<b>SIGNAL PROPAGATION ON TRANSMISSION LINES</b>	<b>9</b>
Transmission line equations, wave solution, wave vs. circuits, initial wave, delay time, Characteristic impedance , wave propagation, reflection, and bounce diagrams Reactive terminations – L, C , static field maps of micro strip and strip line cross-sections, per unit length parameters, PCB layer stackups and layer/Cu thicknesses, cross-sectional analysis tools, Zo and Td equations for microstrip and stripline Reflection and terminations for logic gates, fan-out, logic switching , input impedance into a transmission-line section, reflection coefficient, skin-effect, dispersion.		

**UNIT II MULTI-CONDUCTOR TRANSMISSION LINES AND CROSS-TALK 9**  
Multi-conductor transmission-lines, coupling physics, per unit length parameters ,Near and far-end cross-talk, minimizing cross-talk (stripline and microstrip) Differential signalling, termination, balanced circuits ,S-parameters, Lossy and Lossless models.

**UNIT III NON-IDEAL EFFECTS 9**  
Non-ideal signal return paths – gaps, BGA fields, via transitions , Parasitic inductance and capacitance , Transmission line losses – Rs, tanδ , routing parasitic, Common-mode current, differential-mode current , Connectors.

**UNIT IV POWER CONSIDERATIONS AND SYSTEM DESIGN 9**  
SSN/SSO , DC power bus design , layer stack up, SMT decoupling ,, Logic families, power consumption, and system power delivery , Logic families and speed Package types and parasitic ,SPICE, IBIS models ,Bit streams, PRBS and filtering functions of link-path components , Eye diagrams , jitter , inter-symbol interference Bit-error rate ,Timing analysis.

**UNIT V CLOCK DISTRIBUTION AND CLOCK OSCILLATORS 9**  
Timing margin, Clock slew, low impedance drivers, terminations, Delay Adjustments, canceling parasitic capacitance, Clock jitter.

**TOTAL : 45 PERIODS**

**OUTCOMES:**

- Ability to identify sources affecting the speed of digital circuits.
- Able to improve the signal transmission characteristics

**AP7083**

**WIRELESS SENSOR NETWORKS**

**L T P C**  
**3 0 0 3**

**OBJECTIVES:**

- To enable the student to understand the role of sensors and the networking of sensed data for different applications.
- To expose the students to the sensor node essentials and the architectural details, the medium access and routing issues and the energy constrained operational scenario.
- To enable the student to understand the challenges in synchronization and localization of sensor nodes, topology management for effective and sustained communication, data management and security aspects.

<b>UNIT I</b>	<b>OVERVIEW OF WIRELESS SENSOR NETWORKS</b>	<b>9</b>
Challenges for Wireless Sensor Networks-Characteristics requirements-required mechanisms, Difference between mobile ad-hoc and sensor networks, Applications of sensor networks- case study, Enabling Technologies for Wireless Sensor Networks.		
<b>UNIT II</b>	<b>ARCHITECTURES</b>	<b>9</b>
Single-Node Architecture - Hardware Components, Energy Consumption of Sensor Nodes , Operating Systems and Execution Environments, Network Architecture - Sensor Network Scenarios, Optimization Goals and Figures of Merit, Gateway Concepts. Physical Layer and Transceiver Design Considerations		
<b>UNIT III</b>	<b>MAC AND ROUTING</b>	<b>9</b>
MAC Protocols for Wireless Sensor Networks, IEEE 802.15.4, Zigbee, Low Duty Cycle Protocols And Wakeup Concepts - S-MAC , The Mediation Device Protocol, Wakeup Radio Concepts, Address and Name Management, Assignment of MAC Addresses, Routing Protocols- Energy-Efficient Routing, Geographic Routing.		
<b>UNIT IV</b>	<b>INFRASTRUCTURE ESTABLISHMENT</b>	<b>9</b>
Topology Control, Clustering, Time Synchronization, Localization and Positioning, Sensor Tasking and Control.		
<b>UNIT V</b>	<b>DATA MANAGEMENT and SECURITY</b>	<b>9</b>
Data management in WSN, Storage and indexing in sensor networks, Query processing in sensor, Data aggregation, Directed diffusion, Tiny aggregation, greedy aggregation, security in WSN.		

**TOTAL : 45 PERIODS**

**OUTCOMES:**

- The student would be able to appreciate the need for designing energy efficient sensor nodes and protocols for prolonging network lifetime.
- The student would be able to demonstrate an understanding of the different implementation challenges and the solution approaches.

**OBJECTIVES:**

- To enable the student to understand the basic principles of microwave amplifiers and oscillators, passive component characteristics, resonators and filters, antennas and microwave radio link characterization.

**UNIT I MICROWAVE AMPLIFIERS AND OSCILLATORS 10**

Klystron Amplifier – Reflex Klystron Amplifier – Travelling wave tube Amplifier – Magnetron Oscillator and Modulator-Varactor diode – Solid State Broad band Amplifiers – diode detector and mixer-- YIG tuned Oscillators– Comb generators. GUNN, Tunnel IMPATT diode oscillators.

**UNIT II MICROWAVE PASSIVE COMPONENTS 8**

Scattering parameters-S-Matrix – Attenuator –Phase shifters – T Junctions – Hybrid T Junctions – Directional couplers – Isolater, Properties of ferrite devices – YIG devices—Step recovery Diodes – Gyator – Circulator – Scattering parameter measurement.

**UNIT III MICROWAVE RESONATORS AND FILTERS 9**

Review of resonant circuits – principle of Microwave resonators – field analysis of cavity resonators – Characteristics of filters –YIG tuned filters – Filter and resonant applications – SRD Frequency multipliers and frequency Discriminators.

**UNIT IV MICROWAVE ANTENNAS 8**

Characteristics of Microwave Antennas – Half Wave Dipole –Array – Horn –Paraboloidal Reflector – feeds – Lens and slot Antennas – Leaky and surface wave Antennas – Broad band Antennas – Micro strip Antennas – Antenna measurements.

**UNIT V MICROWAVE RADIO SYSTEM 10**

Types of propagation – Line of sight transmission – Radio horizon – Broadband Microwave Surveillance Receivers—ELINT and Electronic support measures--Microwave links- Repeaters – Diversity – frequency and space diversity systems – Fading – System gain and path losses - Noise and Absorption in Microwave links.

**TOTAL : 45 PERIODS****OUTCOMES:**

The student would be able to design a microwave system taking into account the path losses and fading channel characteristics, carry out measurements and interpret results obtained

**OBJECTIVES:**

- To enable the student to understand the evolving paradigm of cooperative and green wireless communication concepts and the challenges and trade-offs involved in such networks.
- To enable the student to understand the different power saving strategies and energy efficient signal, system and network design.
- To expose the student to the energy saving techniques adopted in existing wireless components, protocols and networks and the evolution of green future wireless communication technologies.

**UNIT I COOPERATIVE COMMUNICATIONS AND GREEN CONCEPTS 9**

Network architectures and research issues in cooperative cellular wireless networks ; Cooperative communications in OFDM and MIMO cellular relay networks: issues and approaches; Fundamental trade-offs on the design of green radio networks, Green modulation and coding schemes.

**UNIT II COOPERATIVE TECHNIQUES 9**

Cooperative techniques for energy efficiency, Cooperative base station techniques for cellular wireless networks; Turbo base stations ; Antenna architectures for cooperation; Cooperative communications in 3GPP LTE-Advanced, Partial information relaying and Coordinated multi-point transmission in LTE-Advanced.

**UNIT III RELAY-BASED COOPERATIVE CELLULAR NETWORKS 9**

Distributed space-time block codes ; Collaborative relaying in downlink cellular systems ; Radio resource optimization; Adaptive resource allocation ; Cross-layer scheduling design for cooperative wireless two-way relay networks ; Network coding in relay-based networks.

**UNIT IV GREEN RADIO NETWORKS 9**

Base Station Power-Management Techniques- Opportunistic spectrum and load management, Energy-saving techniques in cellular wireless base stations , Power-management for base stations in smart grid environment , Cooperative multicell processing techniques for energy-efficient cellular wireless communications.

**UNIT V ACCESS TECHNIQUES FOR GREEN RADIO NETWORKS 9**

Cross-layer design of adaptive packet scheduling for green radio networks; Energy-efficient relaying for cooperative cellular wireless networks ; Energy performance in TDD-CDMA multihop cellular networks ; Resource allocation for green communication in relay-based cellular networks ; Green Radio Test-Beds and Standardization Activities.

**TOTAL : 45 PERIODS****OUTCOMES:**

- The student would be able to appreciate the necessity and the design aspects of cooperative and green wireless communication.
- The student would be able to evolve new techniques and demonstrate their feasibility using mathematical validations and simulation tools.
- The student would be able to demonstrate the impact of the green engineering solutions in a global, economic, environmental and societal context.

**CU7072**

**COGNITIVE RADIO NETWORKS**

**L T P C**  
**3 0 0 3**

**COURSE OBJECTIVES:**

- To enable the student to understand the evolving paradigm of cognitive radio communication and the enabling technologies for its implementation.
- To enable the student to understand the essential functionalities and requirements in designing software defined radios and their usage for cognitive communication.
- To expose the student to the evolving next generation wireless networks and their associated challenges.

**UNIT I SOFTWARE DEFINED RADIO AND ITS ARCHITECTURE 9**

Definitions and potential benefits, software radio architecture evolution, technology tradeoffs and architecture implications. Essential functions of the software radio, basic SDR, hardware architecture, Computational processing resources, software architecture, top level component interfaces, interface topologies among plug and play modules.

**UNIT II COGNITIVE RADIOS AND ITS ARCHITECTURE 9**

Marking radio self-aware, cognitive techniques – position awareness, environment awareness in cognitive radios, optimization of radio resources, Artificial Intelligence Techniques, Cognitive Radio – functions, components and design rules, Cognition cycle – orient, plan, decide and act phases, Inference Hierarchy, Architecture maps, Building the Cognitive Radio Architecture on Software defined Radio Architecture.

**UNIT III SPECTRUM SENSING AND IDENTIFICATION 9**

Primary Signal Detection: Energy Detector, Cyclostationary Feature Detector, Matched Filter, Cooperative Sensing, Definition and Implications of Spectrum Opportunity, Spectrum Opportunity Detection, Fundamental Trade-offs: Performance versus Constraint, MAC Layer Performance Measures, Global Interference Model, Local Interference Model, Fundamental Trade-offs: Sensing Accuracy versus Sensing Overhead.

**UNIT IV USER COOPERATIVE COMMUNICATIONS 9**

User Cooperation and Cognitive Systems, Relay Channels: General Three-Node Relay Channel, Wireless Relay Channel, User Cooperation in Wireless Networks: Two-User Cooperative Network, Cooperative Wireless Network, Multihop Relay Channel

**UNIT V INFORMATION THEORETICAL LIMITS ON CR NETWORKS 9**

Types of Cognitive Behavior, Interference-Avoiding Behavior: Spectrum Interweave, Interference-Controlled Behavior: Spectrum Underlay, Underlay in Small Networks: Achievable Rates, Underlay in Large Networks: Scaling Laws, Interference-Mitigating Behavior: Spectrum Overlay, Opportunistic Interference Cancellation, Asymmetrically Cooperating Cognitive Radio Channels.

**TOTAL : 45 PERIODS**

**OUTCOMES:**

- The student would be able to appreciate the motivation and the necessity for cognitive radio communication strategies.
- The student would be able to evolve new techniques and demonstrate their feasibility using mathematical validations and simulation tools.
- The student would be able to demonstrate the impact of the evolved solutions in future wireless network design.

**CU7003****COMMUNICATION NETWORK DESIGN****L T P C  
3 0 0 3****OBJECTIVES:**

- To expose the student to the functional elements and evolution of networking, the multiplexing, switching and routing related issues and some case studies of wired and wireless network design process.
- To enable the student to analyse the various aspects of a protocol and implement it using a network simulation tool.

**UNIT I INTRODUCTION****9**

Importance of Quantitative Modeling in Engineering of Telecommunication Networks, The Functional Elements of Networking, Evolution of Networking in the Wired and Wireless Domain.

**UNIT II MULTIPLEXING****9**

Performance Measures and Engineering Issues Network performance and source characterization, Circuit multiplexed Networks, packet Multiplexing over wireless networks, Events and processes in packet multiplexer models, Deterministic traffic Models and network calculus, stochastic traffic models, LRD traffic, Link Scheduling and network capacity in wireless networks.

**UNIT III SWITCHING****9**

Performance Measures of packet switches and circuit switches, queuing in packet switches, delay Analysis in Output Queued Switch, Input Queued Switch and CIOQ Switch with Parallelism, Blocking in Switching Networks, Closed Networks.

**UNIT IV ROUTING****9**

Algorithms for Shortest Path Routing - Dijkstra’s Algorithm, Bellman Ford Algorithm, Generalized Dijkstra’s Algorithm, Optimal Routing, Routing Protocols-Distance Vector, Link State and Exterior gateway protocols, Formulations of the Routing Problem-minimum interference Routing, MPLS, QoS Routing, Nonadditive and Additive metrics

**UNIT V CASE STUDIES****9**

Design of a wireless network and a wired network, prototype implementation to be simulated in a network simulator.

**TOTAL : 45 PERIODS****OUTCOMES:**

- Given the specifications of an application, the student would be able to breakup the communication network design problem into a number of sub-problems, identify suitable protocol solutions, implement using any simulator tool and carry out performance characterization.

**CU7005****ENTERPRISE CLOUD COMPUTING****L T P C  
3 0 0 3****OBJECTIVES:**

- To introduce the basics of cloud computing, the architectural and storage needs and the challenges.
- To enable the student to understand the different aspects of developing cloud services, communication infrastructure requirements and deployment tools.
- To make the student aware of the need for energy efficiency and the methods to achieve the same, the applications and the security requirements.

**UNIT I INTRODUCTION TO CLOUD COMPUTING****9**

Cloud Computing – History of Cloud Computing – Cloud Architecture – Cloud Storage – Why Cloud Computing Matters – Disadvantages of Cloud Computing – Microsoft Azure and Elastic Computing – Cloud Services .

**UNIT II DEVELOPING CLOUD SERVICES****9**

Web-Based Application – Pros and Cons of Cloud Service Development – Types of Cloud Service Development – Software as a Service – Platform as a Service – Web Services – On-Demand Computing – Discovering Cloud Services Development Services and Tools – Amazon Ec2 – Google App Engine – IBM Clouds .

**UNIT III CLOUD COMPUTING INFRASTRUCTURES****9**

Cloud-Aware Core Networks, Location and Provisioning Problems, Virtualization Approach to Resource Allocation, Optical Cloud Networks, Communication Infrastructures in Access Networks, Cloud Radio Access Networks, Survey on Mobile-Cloud Computing.

**UNIT IV ENERGY-EFFICIENCY IN CLOUD COMMUNICATION****9**

Energy-Efficient Optical Interconnects, Energy-Efficiency in Cloud Data Centers, Carrier-Grade Distributed Cloud Computing, Energy-Efficiency in a Cloud Computing Backbone, Energy Efficiency for Cloud Computing Services , Energy Efficient Content Distribution.

**UNIT V CLOUD APPLICATIONS AND SECURITY****9**

Cloud Data Centers with Batch Task Arrivals, Virtual Machine Migration in Cloud Computing Environments, Resource Management in Hybrid Clouds, Scalability and Performance Management of Internet Applications in the Cloud, Security and Interoperability Issues, Cloud deploying tools.

**TOTAL : 45 PERIODS**

## OUTCOMES:

- The student would be able to demonstrate an understanding of the development, deployment and management of cloud services and the associated challenges.
- The student would be capable of appreciating the challenges in setting up of communication infrastructures for cloud applications and the security issues.

**MOBILE AD HOC NETWORKS**

**L T P C**  
**3 0 0 3**

## OBJECTIVES:

- To introduce the characteristic features of adhoc wireless networks and their applications to the students.
- To enable the student to understand the functioning of different access and routing protocols that can be used for adhoc networks.
- To enable the student to understand the need for security and the challenges and also the role of crosslayer design in enhancing the network performance.

## UNIT I INTRODUCTION

**9**

Introduction to Ad Hoc networks – definition, characteristics features, applications. Characteristics of Wireless channel, Adhoc Mobility Models: - entity and group models.

## UNIT II MEDIUM ACCESS PROTOCOLS

**9**

MAC Protocols: design issues, goals and classification. Contention based protocols, reservation based protocols, scheduling algorithms, protocols using directional antennas. IEEE standards: 802.11a, 802.11b, 802.11g, 802.15. HIPERLAN.

## UNIT III NETWORK PROTOCOLS

**9**

Addressing issues in ad hoc network, Routing Protocols: Design issues, goals and classification. Proactive Vs reactive routing, Unicast routing algorithms, Multicast routing algorithms, hybrid routing algorithm, Power/ Energy aware routing algorithm, Hierarchical Routing, QoS aware routing.

## UNITIV END -TO - END DELIVERY AND SECURITY

**9**

Transport layer: Issues in designing- Transport layer classification, adhoc transport protocols. Security issues in adhoc networks: issues and challenges, network security attacks, secure routing protocols.

## UNITV CROSS LAYER DESIGN AND INTEGRATION

**9**

Cross layer Design: Need for cross layer design, cross layer optimization, parameter optimization techniques, Cross layer cautionary perspective, Co-operative networks:- Architecture, methods of co-operation, co-operative antennas, Integration of ad hoc network with other wired and wireless networks.

**TOTAL : 45 PERIODS**

## OUTCOMES:

- The student would be able to demonstrate an understanding of the trade-offs involved in the design of adhoc networks
- The student would be able to design and implement protocols suitable to adhoc communication scenario using design tools and characterize them.
- The student is exposed to the advances in adhoc network design concepts.

CU7010

RADAR AND NAVIGATIONAL AIDS

L T P C  
3 0 0 3

## OBJECTIVES:

- To enable the student to understand the basic principles of radar operation and the different types of radars an applications.
- To enable the student to understand the different systems involved in radar configuration, the signal processing aspects to accurately detect and interpret signals and the antenna systems for signal capture.
- To enable the student to understand the role of radar systems as navigational and landing aid.

### UNIT I RANGE EQUATION AND TYPES OF RADAR

9

Basic Radar, Radar equation, Radar parameters, Block diagram, Radar frequencies. Types of Radar: CW, Doppler, MTI, FMCW, Pulsed, Tracking Radar. DSP in Radar (MTD1).

### UNIT II RADAR SYSTEM CONCEPTS

9

Different type of Noise, Noise figure, LNA. False alarm & Missed detection, Radar cross section, TR, ATR, Types of Displays -Color CRT, Bright displays, synthetic video displays, A scope, PPI.

### UNIT III SIGNAL PROCESSING

9

Detection of radar signals in Noise and clutter, detection of non fluctuating target in noise, Matched filter, Matched filter response to delayed Doppler shifted signals, Radar measurements. Doppler Processing, Linear FM Pulse Compression, Passive System: Digital compression, SAW pulse compression. Signal processing in Antenna arrays.

### UNIT IV RADIO NAVIGATION AND LANDING AIDS

9

General principles, Radio compass (NDB), ADF, VOR, DME., Hyperbolic Navigation DECCA, OMEGA, LORAN, Mechanics of Landing: Instrument Landing System, Microwave Landing System.

**UNIT V                    SATELLITE NAVIGATION AND HYBRID NAVIGATION SYSTEM                    9**

Basics of Satellite Navigation, Introduction to Global Positioning System., System Description, Basic principles, position, velocity determination, Signal structure- DGPS, Integration of GPS & INS.

**TOTAL : 45 PERIODS**

**OUTCOMES:**

- The student would demonstrate an understanding of the basic principles of radar design.
- The student would be able to identify suitable navigation systems and their usage for a given application scenario.
- The student would be familiar with the use of navigational systems for estimating and measuring the parameters and analyzing and interpreting them.

**VL7251**

**DATA CONVERTERS**

**L T P C  
3 0 0 3**

**OBJECTIVES:**

- Analog to Digital (AD) and Digital to Analog (DA) converters constitute a very important building block in all electronics systems. It is these blocks which provide the crucial interface between the primarily analog real world signals and the predominantly digital electronic systems.
- These are critical blocks which are utilized in all major industrial sectors including computers, wireless communication, audio and video systems, biomedical systems, aerospace and automotive systems and so on. There are a few established circuit architectures and principles for design of AD and DA converters.
- The performance limits of both these blocks have been continuously and rapidly improved upon over the last thirty years and this trend is expected to continue at the same pace in the foreseeable future too.
- The present course will explain the basic operational and design principles of the most important CMOS AD and DA converter architectures.

**UNIT I                    INTRODUCTION AND CHARACTERISTICS OF AD/DA CONVERTER                    9**  
**CHARACTERISTICS**

Evolution, types and applications of AD/DA characteristics, issues in sampling, Quantization and reconstruction, oversampling and anti-aliasing filters.

**UNIT II                    SWITCH CAPACITOR CIRCUITS AND COMPARATORS                    9**

Switched-capacitor amplifiers, switched capacitor integrator, switched capacitor common mode feedback. Single stage amplifier as comparator, cascaded amplifier stages as comparator, latched comparators. offset cancellation, Op Amp offset cancellation, Calibration techniques.

**UNIT III NYQUIST RATE D/A CONVERTERS 9**  
Current Steering DACs, capacitive DACs, Binary weighted versus thermometer DACs, issues in current element matching, clock feed through, zero order hold circuits, DNL, INL and other performance metrics of ADCs and DACs.

**UNIT IV PIPELINE AND OTHER ADCs 9**  
Performance metrics, Flash architecture, Pipelined Architecture, Successive approximation architecture, Time interleaved architecture.

**UNIT V SIGMA DELTA CONVERTERS 9**  
STF, NTF, first order and second order sigma delta modulator characteristics, Estimating the maximum stable amplitude, CTDSMs, Opamp nonlinearities.

**TOTAL:45 PERIODS**

**OUTCOMES:**

- The student who undergoes this course will be able to carry out the design calculations for developing the various blocks associated with a typical CMOS AD or DA converter, select an appropriate configuration as per the required specifications on overall converter, and eventually arrive at the dimensions and bias conditions of all the MOS transistors involved in the design.
