ANNA UNIVERSITY, CHENNAI

NON- AUTONOMOUS COLLEGES

AFFILIATED TO ANNA UNIVERSITY

M. TECH. INFORMATION TECHNOLOGY

REGULATIONS 2025

PROGRAMME OUTCOMES (POs):

PO	Programme Outcomes
PO1	An ability to independently carry out research /investigation and development work to solve practical problems
PO2	An ability to write and present a substantial technical report/document.
PO3	Students should be able to demonstrate a degree of mastery over the area as per the specialization of the program. The mastery should be at a level higher than the requirements in the appropriate bachelor program

PROGRAMME SPECIFIC OUTCOMES:
PSO1: Design, develop, and evaluate advanced IT solutions including software, network, and cloud-based systems using modern tools and technologies to address complex real-world problems.
PSO2: Conduct independent research in Information Technology, applying data analytics, artificial intelligence, and emerging IT methodologies to innovate, optimize, and contribute to the advancement of knowledge and industry practices.

ANNA UNIVERSITY, CHENNAI

POST GRADUATE CURRICULUM (NON.AUTONOMOUS AFFILIATED INSTITUTIONS)

Programme: M. Tech., Information Technology **Regulations:** 2025

Abbreviations:

BS – Basic Science (Mathematics)

ES – Engineering Science (Programme Core (**PC**), Programme Elective (**PE**))

SD – Skill Development

SL – Self Learning

OE – Open Elective

L – Laboratory Course

T – Theory

LIT – Laboratory Integrated Theory

PW – Project Work

TCP – Total Contact Period(s)

Semester I

Semester I

MA25C07	Advanced Mathematical Methods (CSIE)	L	T	P	C
		3	1	0	4

Course Objectives:

- Develop an in-depth understanding of advanced concepts in linear algebra, multivariate analysis, and number theory for computer science applications.
- Apply mathematical tools such as eigenvalue decomposition, SVD, and multivariate statistical methods to real-world computing and data-driven problems.
- Analyze and implement number-theoretic techniques for cryptography, security, and algorithmic problem-solving in computer science.

Linear Algebra: Vector spaces, norms, Inner Products, Eigenvalues using QR transformations, QR factorization, generalized eigenvectors, Canonical forms, singular value decomposition and applications, pseudo inverse, least square approximations.

Multivariate Analysis: Random vectors and matrices, Mean vectors and covariance matrices, Multivariate normal density and its properties, Principal components, Population principal components, Principal components from standardized variables.

Elementary Number Theory: The division algorithm, Divisibility and the Euclidean algorithm, The fundamental theorem of arithmetic, Modular arithmetic and basic properties of congruences; Principles of mathematical induction and well ordering principle. Primality Testing algorithms, Chinese Remainder Theorem, Quadratic Congruence.

Advanced Number Theory: Advanced Number Theory, Primality Testing algorithms, Chinese Remainder Theorem, Quadratic Congruence, Discrete Logarithm, Factorization Methods, Side Channel Attacks, Shannon Theory, Perfect Secrecy, Semantic Security.

Weightage: Continuous Assessment: 40%, End Semester Examinations: 60%.

Assessment Methodology: Assignments (15), Quiz (10), Virtual Demo (20), Flipped Class Room (10), Review of Gate and IES Questions (25), Project (20).

CP25C01	Advanced Data Structures and Algorithms	L	T	P	C
		3	0	4	5

Course Objectives:

- To explore advanced linear, tree, and graph data structures and their applications.
- To design efficient algorithms using appropriate algorithmic paradigms.
- To evaluate computational complexity and identify tractable vs. intractable problems.

Linear Data Structures and Memory Optimization: Advanced arrays: Sparse arrays, dynamic arrays, cache-aware structures, Linked lists: Skip lists, unrolled linked lists, XOR linked lists, Stacks and Queues: Priority queues, double-ended queues, circular buffers, Hashing: Perfect hashing, cuckoo hashing, extendible hashing.

Practical:

- Implement skip lists and measure performance compared with balanced BST.
- Experiment with cache-aware data structures and analyze memory utilization.

Advanced Tree Data Structures: Balanced Trees: AVL, Red-Black Trees, Splay Trees, Treaps, Multi-way Trees: B-Trees, B+ Trees, R-Trees, Segment Trees, Fenwick Trees, Suffix Trees and Tries for string processing, Applications in indexing, text retrieval, computational geometry.

Practical:

- Implement B+ tree for database indexing use-case.
- Design a suffix tree-based algorithm for DNA sequence matching.

Graph Data Structures and Algorithms: Representation: Adjacency list/matrix, incidence matrix, compressed storage, Traversals: DFS, BFS with applications, Shortest Path Algorithms: Dijkstra, Bellman-Ford, Floyd-Warshall, Johnson's algorithm, Minimum Spanning Trees: Prim's, Kruskal's, Borůvka's algorithm, Network Flow Algorithms: Ford-Fulkerson, Edmonds-Karp, Push-Relabel.

Practical:

- Implement Johnson's algorithm for sparse graph shortest paths.
- Demonstration of Maximum flow in traffic or network routing simulation.

Algorithm Design and Paradigms: Divide and Conquer: Karatsuba's multiplication, Strassen's algorithm, Greedy Methods: Huffman coding, interval scheduling, set cover approximation, Dynamic Programming: Matrix chain multiplication, Floyd-Warshall, knapsack variants, Backtracking and Branch-and-Bound, Randomized Algorithms and Probabilistic Analysis.

Practical:

- Implement Strassen's algorithm and compare with naive matrix multiplication.
- Develop a randomized algorithm for primality testing (Miller–Rabin).

Computational Complexity and Approximation Algorithms: Complexity Classes: P, NP, NP-Complete, NP-Hard, Reductions: Polynomial-time reductions, Cook-Levin theorem (overview), Approximation Algorithms: Vertex cover, set cover, TSP, k-center problem, Heuristic Algorithms: Local search, simulated annealing, genetic algorithms.

Practical:

- Implement approximation algorithm for vertex cover.
- Complexity analysis of a chosen NP-hard problem and implement a heuristic.

Advanced Topics and Emerging Trends: Randomized Algorithms – Monte Carlo Algorithms, Parallel and Distributed Algorithms – PRAM Model, Divide and Conquer in Parallel, Load Balancing, Streaming Algorithms – Data Stream Models, Sketching and Sampling, Frequency Moments, Advanced String Matching – Suffix Trees, Suffix Arrays, Pattern Matching in Linear Time.

Practical:

- Implement randomized and streaming algorithms on real-world datasets.
- Design of parallel and distributed algorithms.

Weightage: Continuous Assessment: 50%, End Semester Examinations: 50%

Assessment Methodology: Assignments (15), Quiz (10), Virtual Demo (20), Flipped Class Room (10), Review of Gate and IES Questions (25), Project (20)

	Description of CO	PO	PSO
CO1	Describe data structures and implement algorithmic solutions for complex computational problems.	--	--
CO2	Analyze the time complexity and efficiency of algorithms for various computing problems.	PO1(3)	PSO1(3)
CO3	Evaluate algorithmic techniques and data structures to determine their suitability for different applications.	PO3(2)	PSO2(2)
CO4	Design optimized solutions for real-world problems using appropriate algorithms and data structures.	PO2(1)	PSO1(3)

CP25C02	Advanced Database Technologies	L	T	P	C
		3	0	0	3

Course Objectives:

- To strengthen the understanding of enhanced ER models and their transformation into relational models with indexing and file structures.
- To understand object-oriented and object-relational database concepts and querying using OQL.
- To explore techniques in query processing, execution, and optimization strategies.

Entity Relationship Model: Entity Relationship Model Revised-Subclasses, Superclasses and Inheritance -Specialization and Generalization-Union Types-Aggregation.

Activity: Design ER Model for a specific use case.

Enhanced Entity Relational Model: Relational Model Revised, Converting ER and EER Model to Relational Model-SQL and Advanced Features, File Structures, Hashing, and Indexing.

Activity: Demonstration of SQL Implementation.

Object Relational Databases: Object Database Concepts-Object Database Extensions to SQL, The ODMG Object Model and ODL, Object Database Conceptual Design-Object Query Language OQL-Language Binding in the ODMG Standard.

Activity: Demonstration of Object Query Language.

Query Processing and Optimization: Query Processing, Query Trees and Heuristics, Query Execution Plans, Cost Based Optimization.

Activity: Design of Query Evaluation Plans.

Distributed Databases: Real-Time Bidding, E-mail Marketing, Affiliate Marketing, Social Marketing Mobile Marketing, Distributed Database Concepts, Data Fragmentation, Replication and Allocation, Distributed Database Design Techniques, Distributed Database Design Techniques, Distributed Database Architectures.

Activity: Demonstration of Concurrency and Transactions.

NOSQL Systems and Bigdata: Introduction to NOSQL Systems-The CAP Theorem, Document, based NOSQL Systems, Key-value Stores, Column-Based or Wide Column NOSQL Systems, NOSQL Graph Databases and Neo4j.

Activity: Design application with MongoDB.

Advanced Database Models, Systems and Applications: Active Database Concepts and Triggers, Temporal Database Concepts, Spatial Database Concepts, Multimedia Database Concepts, Deductive Database Concepts, Introduction to Information Retrieval and Web Search.

Activity: Demonstration of Hadoop infrastructure for Big Data Analytics.

Weightage: Continuous Assessment: 40%, End Semester Examinations: 60%

Assessment Methodology: Assignments (15), Quiz (10), Virtual Demo (20), Flipped Class Room (10), Review of Gate and IES Questions (25), Project (20).

	Description of CO	PO	PSO
CO1	Elaborate different database models for effective database design.	--	--
CO2	Implement advanced database features for optimized data retrieval.	PO1(3)	PSO1(3)
CO3	Evaluate query processing and optimization strategies to improve system performance.	PO3(2)	PSO2(2)
CO4	Design solutions using advanced database models to address complex data-intensive applications.	PO2(1)	PSO1(3)

CP25C03	Advanced Operating Systems	L	T	P	C
		3	0	0	3

Course Objectives:

- To analyze the architectures and design issues of advanced operating systems.
- To develop the model for process synchronization and recovery in complex environments.
- To evaluate algorithms for distributed coordination, resource management, fault tolerance, and security.

Advanced Process and Thread Management: Multithreading models, thread pools, context switching, Synchronization issues and solutions: semaphores, monitors, lock-free data structures, CPU scheduling in multi-core systems

Activity: CPU scheduler simulation for multicore systems.

Memory and Resource Management in Modern OS: Virtual memory, demand paging, page replacement policies-Huge pages, NUMA-aware memory management-Resource allocation in cloud-native environments

Activity: Simulate demand paging and page replacement algorithms.

Virtualization and Containerization: Hypervisors (Type I & II), KVM, QEMU, Xen-Containers: Docker, LXC, systemd-nspawn-OS-level virtualization and namespaces

Activity: Deploy and configure Docker containers with various images.

Distributed Operating Systems and File Systems: Distributed scheduling, communication, and synchronization-Distributed file systems: NFS, GFS, HDFS-Transparency issues and fault tolerance

Activity: Simulate distributed process synchronization.

Security and Trust in Operating Systems: Access control models: DAC, MAC, RBAC-OS hardening techniques, sandboxing, SELinux, AppArmor-Secure boot, rootkit detection, trusted execution environments

Activity: Implement Role-Based Access Control (RBAC) using Linux user and group permissions.

Real-Time and Embedded Operating Systems: Real-time scheduling algorithms (EDF, RM)-POSIX RT extensions, RTOS architecture-TinyOS, FreeRTOS case studies

Activity: Analyze FreeRTOS task scheduling behavior.

Edge and Cloud OS: Future Paradigms: Serverless OS, unikernels, lightweight OS for edge computing-Mobile OS internals (Android, iOS)-OS for quantum and neuromorphic computing (intro)

Activity: Analyze Android's system architecture using emulator tools.

Weightage: Continuous Assessment: 40%, End Semester Examinations: 60%

Assessment Methodology: Assignments (15), Quiz (10), Virtual Demo (20), Flipped Class Room (10), Review of Gate and IES Questions (25), Project (20).

	Description of CO	PO	PSO
CO1	Describe operating system concepts for memory and resource management.	--	--
CO2	Analyse virtualization and distributed OS mechanisms for scalability and performance.	PO1(3)	PSO1(3)
CO3	Evaluate OS security and resource handling strategies in diverse environments.	PO3(2)	PSO2(2)
CO4	Design innovative OS solutions using modern tools and techniques.	PO2(1)	PSO1(3)

NE25C01	Advanced Internet Technologies	L	T	P	C
		3	0	0	3

Course Objective:

- To provide knowledge about modern Internet technologies and applications.
- To enable students to design, implement, and evaluate web-based and distributed applications.
- To develop skills in applying security mechanisms and scalable architectures for real-world Internet-based solutions.

Internet and Web Design: Understanding HTML and XHTML Connections, Understanding Cascading Stylesheets, Understanding JavaScript, Working with Fonts, Texts and Lists, Tables, Internal and External Links, Working with colours and Multimedia.

Activity: Design a responsive webpage using HTML5 and CSS3.

CSS and Dynamic websites: Understanding CSS Box Model and positioning, Navigations, creating fixed and liquid layouts, understanding Dynamic websites.

Activity: Demonstrate RESTful APIs using HTTP methods

Java Script Programming: Working with DOM, Java Script variables, strings and arrays, Functions and objects, Controls and loops, Responding to events, windows and frames using Un obtrusive Java script, using third party libararies, AJAX.

Activity: Build a dynamic SPA using JavaScript.

Emerging Internet Technologies – I: Cookies and sessions, Middleware, Sending Email, production Concerns, Persistence, Routing, Rets APIs and JSON.

Activity: Demonstration using REST APIs and JSON.

Emerging Internet Technologies-II: Static Content, Implementing MVC in express, Security Integrating third party APIs, Debugging, Going live, Maintenance.

Activity: Design of simple login system with JWT authentication

Flask web development in Internet Technologies: Basic Application structure, Templates, Databases, Email, Large Application structure, Application Programming Interfaces, Testing, Deployment.

Activity: Build a simple web application using Flask APIs.

Weightage: Continuous Assessment: 40%, End Semester Examinations: 60%

Assessment Methodology: Assignments (15), Quiz (10), Virtual Demo (20), Flipped Class Room (10), Review of Gate and IES Questions (25), Project (20).
