## ANNA UNIVERSITY : CHENNAI 600 025 UNIVERSITY DEPARTMENTS M.E. MANUFACTURING ENGINEERING REGULATIONS - 2019 CHOICE BASED CREDIT SYSTEM

#### VISION OF THE DEPARTMENT

To develop disciplined, socially committed and technically competent Production Engineers with Creativity, Comprehension and Managerial skills to design and manufacture innovative cost effective quality products for the benefit of mankind.

#### **MISSION OF THE DEPARTMENT**

- 1. Train the students who will be able to design and manufacture Innovative, Environment Friendly, Ergonomic and Cost Effective Quality Products and Services.
- 2. Improve the technical quality of the students to meet the challenges, competitions and opportunities in production engineering.
- 3. Prepare the students who will be able to solve socially relevant engineering problems and other complex problems by means of inculcating Managerial Skills.
- 4. Enhance the department industry / research centre interaction by means of training, internship and student projects to solve industrial problems.

#### ANNA UNIVERSITY : CHENNAI 600 025

#### UNIVERSITY DEPARTMENTS

#### M.E. MANUFACTURING ENGINEERING (FT and PT)

#### **REGULATIONS - 2019**

#### CHOICE BASED CREDIT SYSTEM

#### **PROGRAM EDUCATIONAL OBJECTIVES (PEOs)**

- I. Find gainful employment in Industry and Academic sector.
- II. Enter into doctoral studies leading to research career.
- III. Ability to analyse manufacturing system and provide optimal solutions to practical problems of any organization.
- IV. Gain managerial leadership in their career path by their engineering and manufacturing management skill.
- V. Become an ethically responsible person to work as an individual and part of team for societal cause.

#### PROGRAMME OUTCOMES (POs)

After going through post graduate Manufacturing Engineering, the graduates will exhibit ability to:

| PO # | Graduate Attribute                            | Programme Outcome   |
|------|---|---|
| 1    | Engineering knowledge                         | Apply the knowledge of mathematics, science, engineering fundamentals, and engineering specialization to the solution of complex engineering problems.  |
| 2    | Problem analysis                              | Identify, formulate, research literature, and analyse<br>engineering problems to arrive at substantiated conclusions<br>using first principles of mathematics, natural, and engineering<br>sciences.  |
| 3    | Design/development of solutions               | Design solutions for complex engineering problems and<br>design system components, processes to meet the<br>specifications with consideration for the public health and<br>safety, and the cultural, societal, and environmental<br>considerations. |
| 4    | Conduct investigations of<br>complex problems | Use research-based knowledge including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.   |
| 5    | Modern tool usage                             | Create, select, and apply appropriate techniques, resources,<br>and modern engineering and IT tools including prediction and<br>modelling to complex engineering activities with an<br>understanding of the limitations.                            |
| 6    | The engineer and society                      | Apply reasoning informed by the contextual knowledge to<br>assess societal, health, safety, legal, and cultural issues and<br>the consequent responsibilities relevant to the professional<br>engineering practice.                                 |
| 7    | Environment and sustainability                | Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.   |
| 8    | Ethics  | Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.  |
| 9    | Individual and team work                      | Function effectively as an individual, and as a member or leader in teams, and in multidisciplinary settings.   |

DIRECTOR

Centre for Academic Courses Anna University, Chennai-600 025

| 10 | Communication                     | Communicate effectively with the engineering community and<br>with society at large. Be able to comprehend and write<br>effective reports documentation. Make effective presentations,<br>and give and receive clear instructions. |
|----|-----------------------------------|--|
| 11 | Project management<br>and finance | Demonstrate knowledge and understanding of engineering<br>and management principles and apply these to one's own<br>work, as a member and leader in a team. Manage projects in<br>multidisciplinary environments.                  |
| 12 | Life-long learning                | Recognize the need for, and have the preparation and ability<br>to engage in independent and life-long learning in the<br>broadest context of technological change   |

#### **PROGRAMME SPECIFIC OUTCOMES (PSOs)**

By completion of post graduate Manufacturing Engineering, the graduates will have following Program specific outcomes:

- 1. Knowledge on Modern Manufacturing systems: Familiarization of modern manufacturing systems and practices.
- 2. Knowledge on design, analysis and development of manufacturing processes, automation and quality systems.
- 3. Foundation of sustainable development: Knowledge on application of appropriate materials and manufacturing system and development of an optimal solution to the needs of Industry and society.

#### **APPLIED PROBABILITY AND STATISTICS**

L T P C 3 1 0 4

#### **OBJECTIVES:**

- To understand the basics of random variables with emphasis on the standard discrete and continuous distributions.
- To introduce the concepts of sampling distributions and the test statistics.
- To provide an understanding of the statistical methods and concepts by which real life problems are analyzed.
- To analyze various datas using statistical techniques.
- To train the students in design experiments and use these concepts for research.

#### UNIT I PROBABILITY THEORY

Random variables – probability density and distribution functions-moment generating and characteristic functions – Binomial, Poisson, Normal distributions and their applications.

### UNIT II SAMPLING THEORY

Sampling distributions – Standard error – t, F, Chi square distributions – applications.

### UNIT III ESTIMATION THEORY

Interval estimation for population mean, standard deviation, difference in means, preparation ratio of standard deviations and variances.

### UNIT IV TESTING OF HYPOTHESIS AND ANOVA

Hypothesis testing – Small samples – Tests concerning proportion, means, standard deviations – Tests based on chi square – and Redistribution test -Design of experiments.

#### UNIT V ANOVA

Design of experiments – One, Two factor Models

#### OUTCOMES:

#### At the end of the course, the student will be

- Able to analyze the performance in terms of probabilities and distributions achieved by the determined solution.
- Aware of various test statistics for the samples.
- Able to develop an ability to apply statistical tests in experiments as well as to analyze and interpret data.
- Able to use the statistical tools for their project and future research.
- Able to use the concepts in design of experiments in real life problems.

MN5101 MODERN MANUFACTURING PROCESSES

#### L T P C 3 0 0 3

#### **OBJECTIVES:**

- To create awareness on Abrasive aided machining
- To understand electrical and electrochemical machining processes.
- To analyse the principles of high energy aided machining.
- To study the surface and bulk machining processes of silicon wafer.
- To introduce students to the major manufacture steps in electronic circuit boards.

#### UNIT I ABRASIVE AIDED MACHINING PROCESSES

Abrasive machining – water jet machining - ultrasonic machining –Abrasive flow machining-Magnetorheological Abrasive flow machining- construction working principle – steps - types – process parameters – derivations – problems, merits, demerits and applications.

#### UNIT II ELECTRICAL AND CHEMICAL AIDED MACHINING PROCESSES 9

Wire cut EDM - Electric discharge machining – Electrochemical machining – chemical machining – Maskants - Electrochemical grinding - construction – principle – types – control - circuits – tool design – merits, demerits and applications. Hybrid Machining.

#### UNIT III HIGH ENERGY AIDED MACHINING PROCESSES

Laser beam machining – Electron beam machining – Plasma arc machining – Ion beam machining – construction working principle types – process parameter – derivations – problems, merits, demerits and applications.

#### UNIT IV FABRICATION OF MICRO DEVICES

Semiconductors – Si wafer - planarization – Oxidation - diffusion – ion implantation – etching – metallization – bonding – surface and bulk machining – LIGA Process

#### UNIT V MICROFABRICATION TECHNOLOGY

Moulding – PCB board hybrid and MCM technology – programmable devices and ASIC – electronic material and processing– stereolithography – Solid free form fabrication -SAW devices, Surface Mount Technology

#### **OUTCOMES**:

Students will be able to

- **CO1**: Understand and grasp the significance of modern machining process and its applications.
- **CO2**: Identify the selection of machining process and its parameters.
- **CO3**: Express and appreciate the cutting edge technologies and apply the same for research purposes.
- CO4 : Measure the stages involved in fabrication of micro devices.
- **CO5** : Create new devices involved in micro fabrication and recent technology.

MATERIALS TECHNOLOGY

#### MN5102

#### **OBJECTIVES:**

- To understand the elastic and plastic behaviour of materials.
- To impart knowledge on fracture analysis. •
- To familiarize on modern metallic materials. •
- To review on polymeric and ceramics materials and their applications.
- To enable student to select material for specific applications. •

#### UNIT I ELASTIC AND PLASTIC BEHAVIOR

Elasticity in metals and polymers Anelastic and visco-elastic behaviour - Mechanism of plastic deformation shear strength of perfect and real crystals - Strengthening mechanisms, work hardening, solid solutioning, grain boundary strengthening, poly phase mixture, precipitation, particle, fibre, dispersion and texture strengthening. Effect of temperature, strain and strain rate on plastic behaviour - Super plasticity - Deformation of polymeric, ceramic and non-crystalline materials.

#### UNIT II FRACTURE BEHAVIOUR

Griffith's theory, stress intensity factor, J-Integral and fracture toughness Touahenina \_ mechanisms - Ductile, brittle transition in steel - High temperature fracture, creep - Larson Miller parameter - Deformation and fracture mechanism maps - Fatigue, low and high cycle fatigue test, crack initiation and propagation mechanisms and Paris law. Effect of surface and metallurgical parameters on fatigue – Fracture in ceramics and polymers – Failure analysis, sources of failure, procedure of failure analysis.

#### UNIT III MODERN METALLIC MATERIALS

Dual phase steels, High strength low alloy (HSLA) steel, Transformation induced plasticity (TRIP) Steel, Maraging steel, Nitrogen steel, Super alloys -Intermetallics, Ni and Ti aluminides - smart materials, shape memory alloys – Metallic glass and nano crystalline materials.

#### **UNIT IV** NON METALLIC MATERIALS

Polymeric materials – Formation of polymer structure – Production techniques of fibres, foams, adhesives and coating - structure, properties and applications of Commodity and engineering polymers - Advanced structural ceramics, WC, TIC, TaC, Al<sub>2</sub>O<sub>3</sub>, SiC, Si<sub>3</sub>N<sub>4</sub> CBN and diamond properties, applications as abrasives and cutting tool- Properties and applications of CNT -Graphene based Material

#### UNIT V **SELECTION OF MATERIALS**

Selection for mechanical properties, strength, toughness, fatigue and creep - Selection for Atmospheric, water, Soil and chemical, corrosion Selection for adhesive and abrasive wear resistance - Relationship between materials selection and processing - Case studies in materials selection with relevance to aero, auto, marine, machinery, chemical and nuclear applications.

LTPC 3003

#### OUTCOMES:

Students will be able to

- **CO1**: Get knowledge of mechanism of failure of materials and methods.
- **CO2**: Fully appreciate modification of material property to suit the specific requirements.
- **CO3**: Express and appreciate the existing materials and development of upcoming new materials.
- **CO4**: Have the knowledge to select the various non-metallic materials to suit required applications
- **CO5**: Identify and select suitable material for relevant application.

#### MN5103

#### **ROBOT DESIGN AND PROGRAMMING**

#### L T P C 3 0 0 3

#### **OBJECTIVES:**

- To gain knowledge on growth of robots since origin based on the application.
- To study the kinematics of robot.
- To study the dynamics of robot.
- To expose the students in the various programming techniques in robot and illuminate the curiosity over recent AI techniques.
- To familiarize the sensors and actuators involved in the robot based the application.

#### UNIT I INTRODUCTION

Definition, Need Application, Types of robots – Classifications – Configuration, work volume, control loops, controls and intelligence, specifications of robot, degrees of freedoms, end effectors – types, selection applications.

#### UNIT II ROBOT KINEMATICS

Introduction – Matrix representation Homogeneous transformation, forward and inverse – Kinematic equations, Denvit – Hartenbers representations – Inverse Kinematic relations. Fundamental

DIRECTOR

Centre for Academic Courses Anna University, Chennai-600 025

9

problems with D-H representation, differential motion and velocity of frames – Jacobian, Differential Charges between frames:

#### UNIT III ROBOT DYNAMICS AND TRAJECTORY PLANNING

Lagrangeon mechanics, dynamic equations for sing, double and multiple DOF robots – static force analysis of robots, Trajectory planning – joint space, Cartesian space description and trajectory planning – third order, fifth order - Polynomial trajectory planning

### UNIT IV ROBOT PROGRAMMING AND AI TECHNIQUES

Types of Programming – Teach Pendant programming – Basic concepts in AI techniques – Concept of knowledge representations – Expert system and its components.

### UNIT V ROBOT SENSORS AND ACTUATORS

Design of Robots – characteristics of actuating systems, comparison, microprocessors control of electric motors, magnetostrictive actuators, shape memory type metals, sensors, position, velocity, force, temperature, pressure sensors – Contact and non contact sensors, infrared sensors, RCC, vision sensors.

### TOTAL: 45 PERIODS

#### OUTCOMES:

Students will able to

**CO1**: Apply their knowledge on calculation of end effector coordinate position and angle based on the application.

**CO2**: Calculate force involved in the robot while under operation (i.e. gripping force).

CO3 : Compute the trajectory of robot based on both joint space and Cartesian space.

CO4 : Understand the traditional programming in robot and Modern AI Techniques.

**CO5** : Identify appropriate sensors and actuators based on the application.

#### RM5151 **RESEARCH METHODOLOGY AND IPR**

### COURSE OBJECTIVES:

To impart knowledge and skills required for research and IPR:

Problem formulation, analysis and solutions.

#### Technical paper writing / presentation without violating professional ethics •

Patent drafting and filing patents.

#### UNIT I **RESEARCH PROBLEM FORMULATION**

Meaning of research problem- Sources of research problem, criteria characteristics of a good research problem, errors in selecting a research problem, scope and objectives of research problem. Approaches of investigation of solutions for research problem, data collection, analysis, interpretation, necessary instrumentations

#### **UNIT II** LITERATURE REVIEW

Effective literature studies approaches, analysis, plagiarism, and research ethics.

#### UNIT III **TECHNICALWRITING / PRESENTATION**

Effective technical writing, how to write report, paper, developing a research proposal, format of research proposal, a presentation and assessment by a review committee.

#### **UNIT IV** INTRODUCTION TO INTELLECTUAL PROPERTY RIGHTS (IPR)

Nature of Intellectual Property: Patents, Designs, Trade and Copyright. Process of Patenting and Development: technological research, innovation, patenting, development. International Scenario: International cooperation on Intellectual Property. Procedure for grants of patents, Patenting under PCT.

#### **INTELLECTUAL PROPERTY RIGHTS (IPR)** UNIT V

Patent Rights: Scope of Patent Rights. Licensing and transfer of technology. Patent information and databases. Geographical Indications. New Developments in IPR: Administration of Patent System, IPR of Biological Systems, Computer Software etc.

Traditional knowledge Case Studies, IPR and IITs.

## COURCE OUTCOMES: POGRESS THROUGH KNOW

- 1. Ability to formulate research problem
- 2. Ability to carry out research analysis
- 3. Ability to follow research ethics
- 4. Ability to understand that today's world is controlled by Computer, Information Technology, but tomorrow world will be ruled by ideas, concept, and creativity
- 5. Ability to understand about IPR and filing patents in R & D.

### MN5111 ADVANCED MANUFACTURING PROCESSES LABORATORY L T P C

0 0 4 2

#### **OBJECTIVES:**

- To understand of the various Mechanical, Chemical, Thermal and Electrical based modern machining processes through practical skill set.
- To analyse and observe the principles and its importance.
- To study the major application in manufacture of micro and macro devices.

#### LIST OF EXERCISES

- 1. Plate cutting in abrasive water jet machine
- 2. Micro hole drilling in ECM
- 3. Model fabrication in simple CNC router
- 4. 3D model fabrication using RPT
- 5. Profile cutting using WEDM
- 6. Ultrasonic welding
- 7. Ultrasonic machining
- 8. Ultrasonic cavitations -Stir Casting
- 9. Squeeze Casting
- 10. Incremental forming
- 11. Robot aided Welding

#### (Any 10 for Conduct of end semester examination)

#### **OUTCOMES:**

Students will be able to

- **CO1**: Understand and grasp the significance of modern machining process and its applications through hands-on experience.
- CO2: Identify the selection of machining processes and its process parameters.
- **CO3**: Express and perform project related works.

### MN5112 MECHATRONICS AND ROBOTICS LABORATORY L T P C

0 0 4 2

#### **OBJECTIVES:**

- To understand the various contact and non-contact measurement methods through practical skill set.
- To introduce to Vision system for quality inspection process.
- To understanding over the kinematic analysis on various robot configurations of serial manipulators
- To train students on robot programming for basic work handling operations.

#### LIST OF EXPERIMENTS

- 1. Experimentation on contact and non-contact temperature measurement
- 2. Experimentation on optical sensors for light measurement
- 3. Experimentation on LVDT based distance measurements
- 4. Experimentation on load cell and Strain gauge for force and weight measurements
- 5. Experimentation on Torque measurements
- 6. Experimentation on Ultrasonic non-contactdistance measurements
- 7. Experimentation on vibration measurements
- 8. Experimentation on machine vision for quality inspection
- 9. Embedded System
- 10. Modelling and simulation of basic mechanisms
- 11. Kinematic analysis one DOF and two DOF R, RR, P, PP configuration of serial manipulators.
- 12. Kinematic analysis six DOF serial manipulators
- 13. Trajectory planning of one DOF and two DOF R, RR, P, PP configuration of serial manipulators.
- 14. Trajectory planning of six DOF serial manipulators.
- 15. Robot programming for pick and place operation
- 16. Robot programming for palletizing operation

#### (Any 10 for Conduct of end semester examination)

#### OUTCOMES:

Students will be able to

- CO1: Perform contact and non-contact measurements practically.
- **CO2**: Work on the suitable sensors and transducers for the required application.
- **CO3**: Work on sophisticated Machine vision systems for quality inspection process.
- **CO4**: Perform kinematic analysis on various configurations of serial manipulators.
- **CO5**: To write robot program for basic work handling operations.

#### MN5201 FINITE ELEMENT APPLICATIONS IN MANUFACTURING

#### **OBJECTIVES:**

- To introduce to fundamentals of finite element techniques.
- To analyse one dimensional phenomena using finite element techniques.
- To analyse 2D and 3D phenomena using finite element techniques.
- To impart knowledge about various factors, pre-processing and post-processing steps with implementation of computer in FEA.
- To impart knowledge in the area of finite element methods and its application in manufacturing.

#### UNIT I INTRODUCTION

Fundamentals – Initial, boundary and Eigen value problems – weighted residual, Galerkin and Rayleigh Ritz methods - Integration by parts - Basics of variational formulation - Polynomial and Nodal approximation.

#### **ONE DIMENSIONAL ANALYSIS** UNIT II

Steps in FEM - Discretization. Interpolation, derivation of elements characteristic matrix, shape function, assembly and imposition of boundary conditions-solution and post processing - One dimensional analysis in solid mechanics and heat transfer.

#### UNIT III SHAPE FUNCTIONS AND HIGHER ORDER FORMULATIONS 12

Shape functions for one and two dimensional elements- Three noded triangular and four nodded quadrilateral element Global and natural co-ordinates - Non linear analysis - Isoparametric elements – Jacobian matrices and transformations – Basics of two dimensional, plane stress, plane strain and axisymmetric analysis.

#### **UNIT IV** COMPUTER IMPLEMENTATION

Pre Processing, mesh generation, elements connecting, boundary conditions, input of material and processing characteristics - Solution and post processing - Overview of application packages - Development of code for one dimensional analysis and validation

#### UNIT V **ANALYSIS OF PRODUCTION PROCESSES**

FE analysis of metal casting - special considerations, latent heat incorporation, gap element -Time stepping procedures - Crank - Nicholson algorithm - Prediction of grain structure - Basic concepts of plasticity and fracture - Solid and flow formulation - small incremental deformation formulation - Fracture criteria - FE analysis of metal cutting, chip separation criteria, incorporation of strain rate dependency - FE analysis of welding.

#### OUTCOMES:

Students will be able to

- **CO1**: Perform the fundamentals of solving Finite element problems.
- CO2: Discretize and solve one-dimensional solid mechanics and heat transfer problems in FEA.
- CO3: Identify the impact of shape functions and usage of higher order formulation in converging solution to FEA problem.
- **CO4**: Implementation of computer on solving FEA based problems.
- **CO5**: Structuring a production process through FEA and control it's parameters.

FLUID POWER AUTOMATION

#### L T P C 3 0 0 3

#### **OBJECTIVES:**

- To make the students to learn the basics of hydraulics and pneumatics
- To understand and select appropriate pumps and actuators in fluid power.
- To familiarize the various controlling elements in fluid power.
- To train the students in designing the hydraulic and pneumatic circuits using various design procedures.
- To make the students to understand the various methods of control of hydraulic and pneumatic circuits.

#### UNIT I INTRODUCTION

Need for Automation,–Basics of hydraulic and pneumatic principles- applicable to pump, motor, valves and losses-ISO symbols for fluid power elements, Hydraulic and Pneumatic - Comparison – Selection criteria.

#### UNIT II FLUID POWER GENERATING/UTILIZING ELEMENTS

Hydraulic pumps and motor gears, vane, piston pumps-motors-selection and specification-Drive characteristics – Linear actuator – Types, mounting details, cushioning – power packs – construction. Reservoir capacity, heat dissipation, accumulators – standard circuit symbols, circuit (flow) analysis.

#### UNIT III CONTROL AND REGULATION ELEMENTS

Direction flow and pressure control valves-Methods of actuation, types, sizing of ports-pressure and temperature compensation, overlapped and under lapped spool valves-operating characteristicselectro hydraulic servo valves-Different types-characteristics and performance.

DIRECTOR

Centre for Academic Courses Anna University, Chennai-600 025

9

9

#### UNIT IV CIRCUIT DESIGN

Typical industrial hydraulic circuits-Design methodology – Ladder diagram-cascade method- Truth Table-Karnaugh–Veitch (KV) maps method-sequencing circuits-combinational and logic circuit.

#### UNIT V CONTROL OF HYDRAULIC AND PNEUMATIC CIRCUITS

Electrical control of pneumatic and hydraulic circuits-use of relays, timers, counters, Ladder diagram. Programmable logic control of Hydraulics Pneumatics circuits, Introduction to PLC – Architecture of PLC - ladder diagram for various circuits.

#### TOTAL: 45 PERIODS

The students will be able to

- **CO1**: Understand the working principle of hydraulic and pneumatic components.
- **CO2**: Select and design the hydraulic and pneumatic circuits for different applications.
- **CO3**: Control hydraulic and pneumatic circuits for various applications.
- **CO4**: Solve the problems related to hydraulic and pneumatic circuits.

**CO5**: Solve the problems related to fluid power applications.

#### MN5211

#### MODELLING AND SIMULATION LABORATORY

L T P C 0 0 4 2

#### **OBJECTIVES:**

- To study the fundamentals of finite element analysis from classical method to nodal approximation method in various fields of manufacturing applications.
- To make the students to design an element by Finite element analysis.
- To develop the knowledge related to modelling and simulation in field of manufacturing.

9

#### LIST OF EXERCISES

- 1. One Dimensional FEA Problem like beam, Truss etc.
- 2. Two Dimensional FEA Problems like plane stress, plane strain, axisymmetric and vibration.
- 3. Three Dimensional FEA Problems like shell and contact.
- 4. FEA Application in metal forming like superplastic forming, deep drawing etc
- 5. FEA Application in Metal cutting
- 6. FEA Application in Casting process
- 7. 3D Modelling and Assemble of Engine
- 8. Modelling of Crack Shaft
- 9. Modelling of Connecting Rod
- 10. Modelling of Cotter Joint
- 11. Modelling of Plummer Block and Coupling

#### (Any 10 for Conduct of end semester examination)

#### OUTCOMES:

Students will be able to

- **CO1**: Apply the principles of Finite Element Analysis to solve problems in the field of production engineering.
- CO2: design and analyse various problems in field of manufacturing
- CO3: identify the problems and simulate using Finite element analysis
- CO4: Relate to Finite element analysis in various manufacturing applications.
- CO5: Develop skills in field of design and simulation using FEA.

#### MN5212

**AUTOMATION LABORATORY** 

L T P C 0 0 4 2

#### **OBJECTIVES:**

- To make the students to learn the basic concepts of hydraulics and pneumatics and their controlling elements in the area of manufacturing process.
- To train the students in designing the hydraulic and pneumatic circuits using various design procedures.
- To make the students gain an experience in the field of fluid power applications.
- To gain knowledge related to fluid power elements and its control.
- To train the students to simulate various hydraulic and pneumatic circuits using software.

Attested

Centre for Academic Courses Anna University, Chennai-600 025

#### LAB EXPERIMENTS:

- 1. Study and use of pneumatic and hydraulic elements.
- 2. Simulation of speed control circuits in a hydraulic trainer.
- 3. Simulation of hydraulic circuits in a hydraulic trainer.
- 4. Simulation of single and double acting cylinder circuits using different directional control values.
- 5. One shot and regenerative pneumatic circuits.
- 6. Sequencing of pneumatic circuits.
- 7. Simulation of Logic pneumatic circuits.
- 8. Simulation of electro pneumatic sequencing circuits.
- 9. Simulation of PLC based electro pneumatic sequencing circuits.
- 10. To compare the ladder diagram for electrical and PLC control for the given sequence.
- 11. Offline Programming of movement sequence of Robot Configuration using simulation software.
- 12. Offline manufacturing process planning for specific operation sequence graphically using simulation software.
- 13. Estimation of manufacturing operation time and perform line balancing
- 14. Virtual reality viewers using 3D CAD models for Industry 4.0.
- 15. Internet of things application for pilot project.

#### (Any 10 for Conduct of end semester examination)

#### OUTCOMES:

Students will be able to

- **CO1 :** Design, model and automate simple and complicated industrial automation using hydraulics and pneumatics.
- CO2: Perform simulation for various hydraulics and pneumatics circuits.
- **CO3**: Design and develop circuits for various hydraulics and pneumatics applications.
- **CO4**: Practically experience of various hydraulic and pneumatic elements.
- **CO5**: Simulate various hydraulics and pneumatics circuits using software.

**MINI PROJECT WITH SEMINAR** 

#### **OBJECTIVES**

**MN5213** 

- To prepare students to identify a problem for study.
- To do literature review of a problem.
- To enable to comprehend information in form of presentation both written and oral, to develop technical communication skills.
- To carry out modelling/ conduct experiments beyond regular laboratory exercises in developing solution to the identified problem.
- To cultivate spirit of team work in working as a group.

A group of 2 students have to choose a problem and carry out scientific systematic investigation experimentally/ theoretically in suggesting viable solution. At the end of the semester, each group of students have to submit a report for evaluation.

#### OUTCOMES

Students at the end of course will be

- To critically observe the world around and identify a problem that can be solved.
- To develop skills of read and comprehensively analysing the facts.
- To exhibit skill of presentation both orally and in written form.
- To get hands on experience to doing experimental/ theoretical analysis in synthesis of solution to the problem
- Able to appreciate the importance of team work

#### MN5311

**DISSERTATION - I** 

L T P C 0 0 12 6

**TOTAL: 30 PERIODS** 

#### **OBJECTIVES:**

- To enable students to select and define a problem/need for analysis in the field of manufacturing engineering.
- To review and analyse literature/ data of selected problem for study and propose objective and scope of dissertation work.
- To develop hypothesis and identify methodology based on ethical, scientific and systematic application of knowledge in the field of problem
- To design, model and experiment/develop optimal solution for problem being investigated
- To analysis and interpretation of data, and synthesis of the information to provide valid conclusions and submit dissertation.

#### EVALUATION:

- A project topic may be selected based on the literature survey and the creative ideas of the students themselves in consultation with their project supervisor. The topic should be so chosen that it will improve and develop the skills to design, fabricate, analyse, test and research. Literature survey and a part of the project work be carried out in dissertation I.
- The project work is evaluated jointly by external and internal examiners constituted by the Head of the Department based on oral presentation and the project report.
- A project report for dissertation I is to be submitted at the end.
- Project work evaluation is based on the Regulations of the Credit system for the Post graduate programmes of Anna University

**TOTAL: 90 PERIODS** 

DIRECTOR

#### OUTCOMES:

**CO1**: The students would apply the knowledge gained from theoretical and practical courses in solving problems, so as to give confidence to the students to be creative and get trained in planning, organizing and coordination various components of dissertation work.

#### MN5311

#### **DISSERTATION - II**

#### L T P C 0 0 24 12

#### **OBJECTIVES:**

- Based on practical experience in dissertation-I work, the students will be able to propose and define a problem/need for analysis in the field of manufacturing engineering.
- To comprehensively review and analyse literature/ data to develop hypothesis and identify methodology based on ethical, scientific and systematic application of knowledge in the field of problem
- To design experiments, develop model and conduct experiments/ simulations for development of sustainable and economical solution for problem being investigated
- To analyse and interpret data, and synthesize of the factual information's to arrive at valid conclusions
- To enable students to communicate technical information in form of oral presentation and technical report in form of dissertation

#### **EVALUATION:**

- The progress of the project is evaluated based on a minimum of three reviews.
- The review committee may be constituted by the Head of the Department.
- A project report is required at the end of the semester. The project work is evaluated jointly by external and internal examiners constituted by the Head of the Division based on oral presentation and the project report
- Project work evaluation is based on the Regulations of the Credit system for Post graduate programmes of Anna University

#### OUTCOMES:

**CO1 :** The students' would apply the knowledge gained from theoretical and practical courses in solving problems, so as to give confidence to the students to be creative, well planned, organized, coordinated project outcome of the aimed work.

#### MATERIAL TESTING AND CHARACTERIZATION

#### **OBJECTIVES:**

- To provide understanding of techniques of microstructure and crystal structure evaluation of materials
- To introduce tools for analysis of microstructure and surface topography of materials.
- To understand the techniques of chemical and thermal analysis of materials.
- To gain knowledge in various static mechanical testing methods.
- To gain knowledge in various dynamic mechanical testing methods.

### UNIT I MICRO AND CRYSTAL STRUCTURE ANALYSIS

Principles of Optical Microscopy – Specimen Preparation Techniques – Polishing and Etching – Polarization Techniques – Quantitative Metallography – Estimation of grain size – ASTM grain size numbers – Microstructure of Engineering Materials - Elements of Crystallography – X- ray Diffraction – Bragg's law – Techniques of X-ray Crystallography

 Debye – Scherer camera – Geiger Diffractometer – analysis of Diffraction patterns – Inter planer spacing – Identification of Crystal Structure, Elements of Electron Diffraction – Estimation of residual stress and grain size.

#### UNIT II ELECTRON MICROSCOPY

Interaction of Electron Beam with Materials – Transmission Electron Microscopy – Specimen Preparation – Imaging Techniques – BF and DF – SAD – Electron Probe Microanalysis – Scanning Electron Microscopy – Construction and working of SEM and FESEM Back scattered and Secondary Electron Imaging Techniques – Applications- Atomic Force Microscopy- Construction and working of AFM - Contact and Non-Contact modes Applications.

#### UNIT III CHEMICAL AND THERMAL ANALYSIS

Basic Principles, Practice and Applications of X-Ray Spectrometry, Energy dispersive and Wave Dispersive X-Ray Spectrometry, Auger Spectroscopy, Secondary Ion Mass Spectroscopy, Fourier Transform Infra-Red Spectroscopy (FTIR)- Proton Induced X-Ray Emission Spectroscopy, Differential Thermal Analysis, Differential Scanning Calorimetry (DSC) And Thermo Gravity metric Analysis (TGA) - Dynamic Mechanical Analysis (DMA)

#### UNIT IV MECHANICAL TESTING – STATIC TESTS

Hardness – Brinell, Vickers, Rockwell and Micro Hardness Test, Rebound hardness and Indendation – Tensile Test – Stress – Strain plot – Proof Stress – Torsion Test - Ductility Measurement – Impact Test – Charpy and Izod – DWTT - Fracture Toughness Test, Codes and standards for testing metallic and composite materials.

#### UNIT V MECHANICAL TESTING – DYNAMIC TESTS

Fatigue – Low and High Cycle Fatigues – Rotating Beam and Plate Bending HCF tests – S-N curve – LCF tests – Crack Growth studies – Creep Tests – LM parameters – AE Tests-modal analysis - Applications of Dynamic Tests – Fatigue life estimation.

#### **TOTAL: 45 PERIODS**

Students will be able to

OUTCOMES:

- **CO1 :** To characterize the engineering materials.
- **CO2 :** Know the fundamental principle of Top-notch characterization tools.
- **CO3 :** Choose appropriate mechanical static testing methods.
- **CO4 :** Choose appropriate mechanical dynamic testing methods
- **CO5 :** Identify the crystal structure and analysis can be made.

**COMPUTER AIDED PRODUCT DESIGN** 

L T P C 3 0 0 3

8

8

10

#### **OBJECTIVES:**

- To review the basics of Computer aided design
- To familiarize students on use of modelling tools of CAD software.
- To apply the various design concepts and design tools and techniques while designing a product.
- To understand the product modelling method and its relationship with computer graphics.
- To create awareness on product life cycle management.

#### UNIT I INTRODUCTION

Introduction to Engineering Design – Various phases of systematic design – sequential engineering and concurrent engineering – CAD/CAM hardware andSoftwares – software packages for design and drafting.

#### UNIT II COMPUTER GRAPHICS FUNDAMENTALS AND GEOMETRIC

Computer graphics – applications – principals of interactive computer graphics – 2D 3D transformations – projections – curves - Geometric Modelling – types – Wire frame surface and solid modelling – Boundary Representation, constructive solid geometry – Graphics standards – assembly modelling – use of software packages

#### UNIT III PRODUCT DESIGN CONCEPTS AND PRODUCT DATA MANAGEMENT

Understanding customer needs – Product function modelling – Function trees and function structures – Product tear down methods – Bench marking – Product portfolio – concept generation and selection – Product Data Management – concepts – Collaborative product design manufacturing planning factor – Customization factor – Product life cycle management.

DIRECTOR

Centre for Academic Courses Anna University, Chennai-600 025

#### UNIT IV PRODUCT DESIGN TOOLS AND TECHNIQUES

Product modelling – types of product models; product development process tools – TRIZ – Altshuller's inventive principles – Modelling of product metrics – Design for reliability – design for manufacturability – machining, casting, and metal forming – design for assembly and disassembly - Design for environment

#### UNIT V PRODUCT DESIGN TECHNIQUES

FMEA – QFD – Poka Yoke - DOE – Taguchi method of DOE – Quality loss functions – Design for product life cycle.

#### **TOTAL: 45 PERIODS**

#### OUTCOMES:

Students will be able to

**CO1**: Understand the design phases and various design hardware and software.

**CO2** : Relating basics of various geometrical feature creation.

CO3 : Systematically work on each stages in the development of a new product and its management.

CO4 : Predicting on various factors for various design applications.

CO5 : Mixing the techniques in the design of new product.

# PROGRESS THROUGH KNOWLEDGE

#### MN5003

#### THEORY OF METAL FORMING

L T P C 3 0 0 3

#### **OBJECTIVES:**

- To provide knowledge on the mechanism involved in plastic deformation and parameter representation.
- Enable students to understand various bulk forming process and its recent technology.
- To provide overview of various sheet metal forming process
- To study the powder metallurgy techniques and Special metal forming processes.
- To introduce the significance of surface treatment and industrial application of metal forming

DIRECTOR

Centre for Academic Courses Anna University, Chennai-600 025

10

#### UNIT I THEORY OF PLASTICITY

Theory of plastic deformation – Yield criteria – Tresca and Von-Mises – Distortion energy – Stressstrain relation - Mohr's circle representation of a state of stress - cylindrical and spherical co-ordinate system – upper and lower bound solution methods – Overview of FEM applications in Metal Forming analysis.

#### **UNIT II** THEORY AND PRACTICE OF BULK FORMING PROCESSES

Analysis of plastic deformation in Forging, Rolling, Extrusion, rod/wire drawing and tube drawing -Effect of friction - calculation of forces, work done - Process parameters, equipment used - Defects applications - Recent advances in Forging, Rolling, Extrusion and Drawing processes - Design consideration in forming.

#### UNIT III SHEET METAL FORMING

Formability studies - Conventional processes - High energy rate forming (HERF) techniques -Superplastic forming techniques – Hydro forming – Stretch forming – Water hammer forming – Principles and process parameters – Advantage, Limitations and application – Incremental forming.

#### **UNIT IV** POWDER METALLURGY AND SPECIAL FORMING PROCESSES

Overview of P/M technique - Advantages - applications - Powder preform forging - powder rolling -Tooling, process parameters and applications. - Orbital forging - Isothermal forging - Hot and cold isostatic pressing - High speed extrusion - Rubber pad forming - Fine blanking - LASER beam forming

#### UNIT V SURFACE TREATMENT AND METAL FORMING APPLICATIONS

Experiment techniques of evaluation of friction in metal forming selection - influence of temperature and gliding velocity – Friction heat generation – Friction between metallic layers – Lubrication carrier layer – Surface treatment for drawing, sheet metal forming, Extrusion, hot and cold forging. Processing of thin AI tapes - Cladding of AI alloys - Duplex and triplex steel rolling - Thermo mechanical regimes of Ti and Al alloys during deformation - Formability of welded blank sheet - Laser structured steel sheet - Formability of laminated sheet.

### **OUTCOMES:**

Students will able to

- CO1: Understand the state of stress in metal forming process.
- **CO2**: To identify the appropriate bulk forming process based on the application.
- CO3: Understand the conventional sheet metal forming process and various high energy rate forming techniques.
- **CO4**: Understand the powder metallurgy forming technique.
- **CO5**: Select appropriate surface heat treatment technique.

#### MN5004 MANUFACTURING PROCESS PLANNING AND COST ESTIMATION

#### **OBJECTIVES:**

- To introduce the concepts of manufacturing process planning.
- To familiarize the idea of cost accounting and information.
- To develop estimation skills in estimating material and labour cost.
- To introduce concepts of depreciation and different methods of depreciation.
- To develop estimation skills in estimating cost of manufactured product such as casting, welding, forging, machining.

#### UNIT I PROCESS PLANNING

Process planning– Aims– Information required– Techniques of process planning – Questionnaire method– Key functional analysis– preparation of processor planning operation sheets– Routing– Process selection– Break even analysis.

#### UNIT II COST ESTIMATION AND ACCOUNTING

Cost estimation- aims and objectives - cost accounting - aims and accounting - Difference between estimation and accounting - Realistic estimation - Estimation procedure - Elements of cost - Material cost - labour cost-expenses overheads - Factory overheads - Administrative overheads - selling and distribution overheads - components of cost.

#### UNIT III ESTIMATION OF MATERIAL AND LABOR COST

Material cost estimation – Procedure – Mensuration formulae – Estimation of material cost for different jobs of varying geometries such as casting, forging., Estimation of labour cost –set up time – Tear down time – operation time – Machining time – Time allowances – Relaxation allowances – Personnel allowances – Allowances specific

#### UNIT IV DEPRECIATION

Depreciation – Definition – causes of depreciation – Methods of depreciation – Straight line Method – Declining balance method – sum of the years digit method – sinking fund method-Annuity method – Repair provision method.

#### UNIT V ESTIMATION OF COST FOR MANUFACTURING PROCESS

Estimation of cost for forging, welding - Estimation of cost for foundry – Estimation of machining time for various machining operations such as Turning , Drilling, Reaming, Milling, Grinding, Boring, Shaping, Planning operations etc.,

#### OUTCOMES:

Students will be able to

- **CO1**: Design a suitable manufacturing planning sheet for a manufactured product.
- **CO2**: Arrive at cost of manufactured product in stages.
- **CO3**: Estimate material and labour cost.
- **CO4**: Identify a suitable method for depreciation.
- **CO5 :** estimate cost or manufactured product such as casting, welding, forging, machined component.

#### MN5005

#### MICRO SYSTEM TECHNOLOGY

#### L T P C 3 0 0 3

#### **OBJECTIVES:**

- To Provide Knowledge of Semiconductors and Solid Mechanics of MEMS Devices
- To introduce to various types of fabrication processes in MEMS Devices.
- To educate on the Rudiments of micro devices.
- To provide overview of properties and methods of nanomaterials.
- To educate on the analytical tools for imaging and characterization of MEMS.

#### UNIT I OVER VIEW OF MEMS AND MICROSYSTEMS

6

Definition – historical development – properties, design and fabrication micro-system, microelectronics, working principle, applications and advantages of micro system. Substrates and wafers, silicon as substrate material, mechanical properties of Si, Silicon Compounds - silicon piezo-resistors, Gallium arsenide, quartz, polymers for MEMS, conductive polymers.

UNIT II FABRICATION PROCESSES AND MICRO SYSTEM PACKAGING 10 Photolithography, photo resist applications, light sources, ion implantation, diffusion– Oxidation thermal oxidation, silicon dioxide, chemical vapour deposition, sputtering - deposition by epitaxy – etching – bulk and surface machining – LIGA process – LASER, Electron beam ,Ion beam processes – Mask less lithography. Micro system packaging – packaging design– levels of micro system packaging -die level, device level and system level – interfaces in packaging – packaging technologies- Assembly of Microsystems

DIRECTOR

Centre for Academic Courses Anna University, Chennai-600 025

#### UNIT III MICRO DEVICES

Sensors – classification – signal conversion ideal characterization of sensors micro actuators, mechanical sensors – measurands - displacement sensors, pressure sensor, flow sensors, Accelerometer, chemical and bio sensor - sensitivity, reliability and response of micro-sensor - micro actuators – applications.

#### UNIT IV SCIENCE AND SYNTHESIS OF NANO MATERIALS

Classification of nano structures – Effects of nano scale dimensions on various properties – structural, thermal, chemical, magnetic, optical and electronic properties fluid dynamics –Effect of nano scale dimensions on mechanical properties - vibration, bending, fracture Nanoparticles, Sol-Gel Synthesis, Inert Gas Condensation, High energy Ball Milling, Plasma Synthesis, Electro deposition and other techniques. Synthesis of Carbon nanotubes – Solid carbon source based production techniques – Gaseous carbon source based production techniques – Diamond like carbon coating. Top down and bottom up processes.

#### UNIT V INSPECTION OF MICRO/NANO SYSTEMS

Micro/Nano-processing systems – Nano measuring systems – characterization – analytical imaging techniques – microscopy techniques, electron microscopy scanning electron microscopy, confocal LASER scanning microscopy - transmission electron microscopy, transmission electron microscopy, scanning tunnelling microscopy, atomic force microscopy, diffraction techniques – spectroscopy techniques – Raman spectroscopy, 3D surface analysis – Mechanical, Magnetic and thermal properties – Nano positioning systems.

#### **OUTCOMES:**

Students will be able to

- **CO1 :** Understand the properties of various polymers, different materials used for MEMS and working principle of MEMS.
- CO2: Get knowledge about various fabrication techniques of MEMS.
- CO3: Get awareness of various micro actuators and its application.
- **CO4**: Impart the knowledge to the students about nano materials and techniques in synthesis of nano materials.
- CO5: Understand the various nano measurements techniques.

### MN5073 MECHATRONICS IN MANUFACTURING SYSTEMS

12

8

8

8

9

#### **OBJECTIVES:**

- To provide overview of various electrical and electronic control techniques used in modern manufacturing systems.
- To know the basic working principle of sensors and transducers of use for manufacturing systems
- To know the basic working principle of drives and actuators of use for manufacturing systems
- To know the features, modules and interfaces of microcontrollers and microprocessors
- To gain the knowledge of integration of mechatronic systems in automation of modern manufacturing systems

#### UNIT I INTRODUCTION TO MECHATRONICS IN MODERN MANUFACTURING

Introduction to Process Parameters in Conventional Manufacturing – Assembly – Inspection – Transportation - Introduction to Systems - Subsystems of Mechatronics - Identification of Mechatronics' Entities in Modern Manufacturing - Mechanical, Fluid, Thermal, Electrical, Electronics, Communication, Control systems and Software Integration for Manufacturing - Classification of Manufacturing based on Mechatronics – CNC based Subtractive Manufacturing – Rapid Prototyping based Additive Manufacturing- Automated Assembly Stations – Modern Quality Inspection and Transportation Systems.

### UNIT II SENSORS AND TRANSDUCERS

Introduction – Performance Terminology – Resistive Transducers – Inductive Transducers - Capacitance Transducers – Optical Sensors – Contact and Non-Contact Temperature Sensors – Eddy Current Sensor – Hall Effect Sensor – Piezo Electric Sensor - Ultrasonic Sensors – Proximity Sensors – Chemical and Gas Sensors - Signal Conditioning - Condition Monitoring

# UNIT III DRIVES AND ACTUATORS

Role of Linear and Rotary Actuators - Electrical Actuators - Servo Concepts and Stepper Motors -Fluid Power – Piezo Actuators – Solenoids - Function of Drives - Mechanical Switching Devices – Solid State drives for various actuators

# UNIT III MICROPROCESSORS AND MICROCONTROLLERS

Requirement for Processor – Comparison of 8085 Microprocessor and 8051 Microcontrollers– 8051 Microcontrollers Architecture -Assembly Language Programming- Instruction Set, Addressing Modes, Basic Programming – Interfacing - Sensors, Keyboard, LED, LCD, A/D and D/A Converters, Actuators – Embedded Systems

### UNIT V INTEGRATION OF MANUFACTURING SYSTEMS

Design Process - Stages of Design Process – Skeletal Structure and Block Diagram of CNC Based - Vertical Machining Centre, turning centre, Water Jet Machine, Electrical Discharge Machine, Serial Manipulator, hydraulic press, 3 D printers– Coordinate Measuring Machine –Automated conveyors - Extended Transportation System – Total Integration of Manufacturing Systems for Production Automation

# TOTAL: 45 PERIODS

### OUTCOMES:

Students will be able to

**CO1** : Imply the knowledge to study the mechatronics in modern manufacturing systems. Attested **CO2** : Identify and select the sensors and transducers based on the application.

DIRECTOR

Centre for Academic Courses Anna University, Chennai-600 025 **CO3**: Identify the principles and functions of drives and actuators.

**CO4** : Get knowledge of microprocessor and microcontrollers and its functions.

**CO5**: Apply the knowledge about integration of mechatronic systems in manufacturing.

#### MN5006

ADVANCED WELDING TECHNOLOGY

L T P C 3 0 0 3

### **OBJECTIVES:**

- To provide overview of different arc and gas welding processes.
- To know various solid state and special welding processes.
- To introduce to metallurgy of welding.
- To design the weldments for various materials.
- To gain knowledge on various welding defects and inspection methods.

# UNIT I ARC AND GAS WELDING PROCESSES

Fundamental Principles – Air Acetylene Welding, Oxyacetylene Welding, Carbon Arc Welding, Shielded Metal Arc Welding, Submerged Arc Welding, TIG and MIG Welding, Plasma Arc Welding and Electroslag Welding Processes – Advantages, Limitations and Applications - Spot Welding, Seam Welding, Projection Welding, Resistance Butt Welding, Flash Butt Welding, Percussion Welding and High Frequency Resistance Welding Processes – Advantages, Limitations and Applications – Robotic Welding

### UNIT II SOLID STATE AND SPECIAL WELDING PROCESSES

Cold Welding, Diffusion Bonding, Explosive Welding, Ultrasonic Welding, Friction Welding, Friction Stir Welding - Forge Welding, Roll Welding and Hot Pressure Welding Processes – Advantages, Limitations and Applications - Thermit Welding, Atomic Hydrogen Welding, Electron Beam Welding, Laser Beam Welding, Friction Stir Welding, Under Water Welding, Welding Automation In Aerospace, Nuclear and Surface Transport Vehicles.

Haesied

DIRECTOR

9

Centre for Academic Courses Anna University, Chennai-600 025

# UNIT III WELDING METALLURGY

Heat flow - temperature distribution-cooling rates - influence of heat input, joint geometry, plate thickness, preheat, significance of thermal severity number, Epitaxial growth - weld metal solidification - columnar structures and growth morphology effect of welding parameters - absorption of gases - gas/metal and slag/metal reactions, Phase transformations- weld CCT diagrams - carbon equivalent-preheating and post heating weldability of low alloy steels, welding of stainless steels use of Schaffler and Delong diagrams, welding of cast irons - Welding of Cu, Al, Ti and Ni alloys – processes, difficulties, microstructures, defects andremedial measures, Origin - types - process induced defects, - significance - remedial measures, Hot cracking - cold cracking -lamellar tearing - reheat cracking - weldability tests - effect ofmetallurgical parameters,.

#### UNIT IV DESIGN OF WELDMENTS

Type of joints, joint efficiency, factor of safety, symbols, selection of edge preparation, design considerations, types of loading, Permissible stress, allowable defects, computation of stresses in welds, weld size calculation, code requirement for statically loaded structures - Design for fluctuating and impact loading - dynamic behaviour of joints – stress, concentrations - fatigue analysis - fatigue improvement techniques - permissible stress- life prediction, Concept of stress intensity factors - LEFM and EPFM concepts - brittle fracture- transition, temperature approach - fracture toughness testing, application of fracture mechanics to fatigue Welding residual stresses - causes, occurrence, effects and measurements - thermal and mechanical relieving; types of distortion - factors affecting distortion - distortion control methods - prediction - correction, jigs, fixtures and positioners.

### UNIT V WELDING DEFECTS AND INSPECTION

Classification of weld defects- General sources of weld defects- Arc welding defects- Weld defects in other than Arc welding processes. Resistance welding defects- Defects in Friction welding- Defects in friction stir welding - Defects in welds of other welding processes-Visual Inspection-Liquid Penetrant Inspection- Magnetic particle inspection- Ultra sonic testing(UT) Radiography testing (RT) - Eddy current testing –Thermography- Optical and Acoustical holography.

#### **TOTAL : 45 PERIODS**

### OUTCOMES:

Students will be able to

- CO1: Understand the different arc and gas welding processes.
- **CO2**: Know and perform solid state and special welding process.
- CO3: Understand and analyze the material structures after welding.
- CO4: Design the weldments for various materials.
- **CO5**: Attain the knowledge about various welding defects and inspection methods.

#### QUALITY AND RELIABILITY ENGINEERING

| L | Т | Ρ | С |
|---|---|---|---|
| 3 | 0 | 0 | 3 |

#### **OBJECTIVES:**

- To study the approaches and techniques to assess quality by statistical process control.
- To study the methodology to assess and sampling of parameters
- To introduce to experimental design and Taguchi method.
- To illustrate the students the concepts of reliability engineering tools.
- To train students the designfor reliability and maintainability.

### UNIT I QUALITY AND STATISTICAL PROCESS CONTROL

Quality – Definition – Quality Assurance – Variation in process – Factors – process capability – control charts – variables X, R and X, - Attributes P, C and U-Chart tolerance design. Establishing and interpreting control charts – charts for variables – Quality rating – Short run SPC.

### UNIT II ACCEPTANCE SAMPLING

Lot by lot sampling – types – probability of acceptance in single, double, multiple sampling plans – OC curves – Producer's risk and consumer's risk. AQL, LTPD, AOQL, Concepts – standard sampling plans for AQL and LTPD – use of standard sampling plans.

### UNIT III EXPERIMENTAL DESIGN AND TAGUCHI METHOD

Fundamentals – factorial experiments – random design, Latin square design – Taguchi method – Loss function – experiments – S/N ratio and performance measure – Orthogonal array.

# UNIT IV CONCEPT OF RELIABILITY AND DESIGN

Definition – reliability vs quality, reliability function – MTBF, MTTR, availability, bathtub curve – time dependent failure models – distributions – normal, Weibull, lognormal – Reliability of system and models – serial, parallel and combined configuration – Markove analysis, load sharing systems, standby systems, covariant models, static models, dynamic models.

### UNIT V DESIGN FOR RELIABILITY AND MAINTAINABILITY

Reliability design process, system effectiveness, economic analysis and life cycle cost, reliability allocation, design methods, parts and material selection, derating, stress-strength and analysis, failure analysis, identification determination of causes, assessments of effects, computation of criticality index, corrective action, system safety – analysis of down-time – the repair time distribution, stochastic point processes system repair time, reliability under preventive maintenance state dependent system with repair. MTTR – mean system down time, repair vs replacement, replacement models, proactive, preventive, predictive maintenance maintainability and availability, optimization techniques for system reliability with redundancy heuristic methods applied to optimal system reliability.

### TOTAL: 45 PERIODS

### OUTCOMES:

Student will be able to

- **CO1 :** Understand the basic techniques of quality improvement, fundamental knowledge of statistics and probability and use control charts.
- **CO2**: Describe different sampling plans.
- **CO3**: Solve problems by various design methods.
- **CO4**: Acquire basic knowledge of reliability.
- **CO5**: Implement the concepts of reliability and maintainability.

MANUFACTURING METROLOGY

**OBJECTIVES:** 

- To instruct through basic nomenclature of metrology.
- To create awareness of tools for inspection of surface, threads and gears.
- To introduce to laser metrology and CMM.
- To introduce to machine vision and electro-optical devices.
- To impart knowledge on basic quality tools and role of metrology in quality control.

#### UNIT I BASICS OF METROLOGY

Elements of Measuring System –Accuracy – Precision and Calibration of instruments –Errors in measurement – Uncertainty in measurements – Sources and types- Illustrative problems on estimation of Uncertainty - Interchangeability – Selective assembly - Limits – Fits – Tolerances – Process capability – Terminology - Design of limit gauges – Taylor's principle - Illustrative problems-Geometric Dimensioning and Tolerancing - Linear and angular measuring instruments – Types – Principles and Applications – Types of Comparators

#### UNIT II SURFACE METROLOGY, INSPECTION OF THREADS AND GEARS

Measurement of straightness and flatness– Measurement of roundness – surface texture measurement methods– Surface texture measuring instruments- Metrology of screw threads -two wire and three wire methods -gear terminology - measurement of various elements of gears - pitch circle method, constant chord method, base tangent method

### UNIT III LASER METROLOGY AND COMPUTER AIDED METROLOGY

Lasers in metrology - Laser micrometer - Laser interferometer–Co-ordinate measuring machines - CMM configurations – hardware components – software – Probe sensors- Errors – Environmental factors –Role of CMM in reverse engineering-Machine Vision - Basic concepts of Machine Vision System – Elements – Applications - On-line and in-process monitoring in production - Computed tomography – White light Scanners.

9

9

9

T P C 0 0 3

### UNIT IV MACHINE VISION

Role of metrology in quality control - Dimensions of product and service quality -The seven traditional tools of quality- Histogram – Pareto diagram – Cause and effect diagram –Flow charts –Check sheet – Scatter diagram – Quality control charts – The seven new tools of quality –Why-why analysis - Affinity diagram – Inter relationship digraph - Tree diagram - Prioritization matrix - Process decision program chart - Activity network diagram

### UNIT V APPLICATION OF QUALITY CONTROL IN MANUFACTURING

Need for quality management system — ISO 9001 and other management system and models -Benchmarking - Continuous process improvement – PDCA cycle - 5s - Kaizen Quality Function Deployment (QFD) – Taguchi method – Total Productive Maintenance - Failure mode and effect analysis – Six sigma

#### TOTAL: 45 PERIODS

Students will be able to

**OUTCOMES:** 

- **CO1 :** Understand the basic definitions of metrology.
- CO2: Know the advance working principles of modern measurement systems
- **CO3 :** Get knowledge in selection of various quality tools for proper application.
- **CO4 :** Apply the machine vision techniques in measurements.
- CO5: Know the basics of quality management system (ISO), six sigma tools.

### METAL CUTTING THEORY AND PRACTICE

### **OBJECTIVES**:

- To introduce to types of tool, wear and tool life in metal cutting process.
- To understand the mechanisms of metal removal in metal cutting operations.
- To understand the process of heat generation during metal cutting process and knowledge about various cutting fluids and its properties.
- To train students on identifying the machining parameters.
- To familiarize the various types of cutting tool materials.

#### UNIT I TOOL NOMENCLATURE, TOOL WEAR AND TOOL LIFE

Nomenclature of single point cutting tool and nomenclature of multi point cutting tools - Twist Drill milling cutter - Tool geometry - Mechanisms of tool wear - Abrasion - Adhesion - Diffusion - Types of tool wear - flank wear - crater wear - Tool life - Tool life equations - factors affecting tool life -Illustrative problems-observation made in the cutting of metals-basic mechanism of chip formationthin and thick zone modes-types of chips-chip breaker-orthogonal Vs obligue cutting-force velocity relationship for shear plane angle in orthogonal cutting-energy consideration in machining-review of Merchant, Lee and Shafter theories-critical comparison.

#### MECHANICS OF METAL CUTTING UNIT II

Types of chips - Continuous chips - Discontinuous chips - continuous chips with BUE - Mechanism of chip formation- Chip thickness ratio - Orthogonal cutting - Oblique cutting - Merchant circle diagram - Force relationships - shear angle - shear stress - shear strain - velocity relationships -Illustrative Problems

#### UNIT III THERMAL ASPECTS AND CUTTING FLUIDS

Sources of heat generation in metal cutting- Experimental determination of tool temperatures - Tool work piece thermocouple- embedded thermocouple - Infrared photographic technique- Cutting fluid properties - types of cutting fluids - Selection of cutting fluids.

#### MACHINING PARAMETERS AND RELATED QUANTITIES **UNIT IV**

Machining parameters and related quantities to various metal cutting operations - turning, drilling, reaming, boring, milling, broaching, thread cutting, grinding, fine finishing processes and gear cutting.

#### UNIT V **CUTTING TOOL MATERIALS**

Types of motions in machining – Desirable properties of tool materials – Characteristics of cutting tool materials - High carbon steel, High speed steel, cast alloys, carbides, ceramics, Diamond and CBN tools- coating of tools - bits and inserts - Need for rational approach to the problem of cutting materials - Machinability

#### OUTCOMES:

Students will be able to

- **CO1**: Evaluate the tool wear and tool life for various type of cutting tools (single point, multi point etc.)
- **CO2**: Calculate various mechanics (cutting force relationships) during metal cutting operations.
- **CO3**: Determine the tool temperature and heat generation during cutting operation using various measurement techniques and also select optimal cutting fluid based on the application.
- **CO4**: Select the machining parameters for various machining operations.
- Attested CO5: Get knowledge of various recent cutting tool materials and its properties to aid them in the selection of efficient tool material for the machining process.

# COMPUTER INTEGRATED MANUFACTURING

L T P C 3 0 0 3

6

10

#### **OBJECTIVES:**

- To provide the overview of evolution of automation and CIM.
- To understand the various Automation tools include various material handling system and its Principles.
- To train students to apply group technology and FMS.
- To familiarize the computer aided process planning in manufacturing.
- To introduce to basics of data transaction, information integration and control of CIM.

#### UNIT I INTRODUCTION

Introduction to CAD, CAM, CAD/CAM and CIM - Evolution of CIM – CIM wheel and cycle – Production concepts and mathematical models – Simple problems in production models – CIM hardware and software – Major elements of CIM system – Three step process for implementation of CIM – Computers in CIM – Computer networks for manufacturing – The future automated factory – Management of CIM – Impact of CIM on personnel – CIM status.

### UNIT II AUTOMATED MANUFACTURING SYSTEMS

Automated production line – system configurations, work part transfer mechanisms – Fundamentals of Automated assembly system – System configuration, Part delivery at workstations – Design for automated assembly – Overview of material handling equipments – Consideration in material handling system design – The 10 principles of Material handling. Conveyor systems – Types of conveyors – Operations and features. Automated Guided Vehicle system – Types of vehicles and AGVs applications – Vehicle guidance technology – Vehicle management and safety. Storage system performance – storage location strategies – Conventional storage methods and equipments – Automated storage/Retrieval system and Carousel storage system Deadlocks in Automated manufacturing systems – Petrinet models – Applications in Dead lock avoidance – smart manufacturing – Industry 4.0 - Digital manufacturing – Virtual manufacturing

Centre for Academic Courses Anna University, Chennai-600 025

### UNIT III GROUP TECHNOLOGY AND FMS

Part families – Visual – Parts classification and coding – Production flow analysis – Grouping of parts and Machines by rank order clustering method – Benefits of GT – Case studies. FMS – Components – workstations – FMS layout configurations – Computer control systems – FMS planning and implementation issues – Architecture of FMS – flow chart showing various operations in FMS – Machine cell design – Composite part concept, Holier method, Key machine concept – Quantitative analysis of FMS – Bottleneck model – Simple and complicated problems – Extended Bottleneck model - sizing the FMS – FMS applications, Benefits.

### UNIT IV PROCESS PLANNING

Process planning – Activities in process planning, Informations required. From design to process planning – classification of manufacturing processes – Selection of primary manufacturing processes – Sequencing of operations according to Anteriorities – various examples – forming of Matrix of Anteriorities – case study. Typical process sheet – case studies in Manual process planning. Computer Aided Process Planning – Process planning module and data base – Variant process planning – Two stages in VPP – Generative process planning – Flow chart showing various activities in generative PP – Semi generative process planning.

# UNIT V TYPES OF PROCESS CONTROL AND AUTOMATIC DATA CAPTURE

Introduction to process model formulation – linear feed back control systems – Optimal control – Adaptive control –Sequence control and PLC. Computer process control – Computer process interface – Interface hardware – Computer process monitoring – Direct digital control and Supervisory computer control - Overview of Automatic identification methods – Bar code technology – Other Automatic data capture technologies.

**TOTAL : 45 PERIODS** 

### OUTCOMES:

Students will be able to

- CO1: Understand the basics of computer aided engineering.
- CO2: Choose appropriate automotive tools and material handling systems.
- **CO3**: Understand the overview of group technology, FMS and automation identification methods.
- **CO4**: Design using computer aided process planning for manufacturing of various components
- **CO5**: Acquire knowledge in computer process control techniques.

#### PRODUCTION AND OPERATIONS MANAGEMENT

LTPC

### **OBJECTIVES:**

- To familiarize with various forecasting models.
- To impress upon the importance of sequencing problem in industries.
- To design and develop inventory control models for a given industry.
- To familiarize with project management techniques such as CPM and PERT.
- To train on plant engineering techniques such as plant location, plant layout, materials handling and work study.

# UNIT I FORECASTING

Forecasts-Types-Purpose- opinion and judgmental method-Time series methods – moving average - weighted moving average – method of least squares – Exponential smoothing method- Regression and correlation methods – simple and multiple regression – Linear and Nonlinear regression.

# UNIT II SCHEDULING AND SEQUENCING

Scheduling – Single Criterion rules –Sequencing –n job 2 machine problem – Johnson's algorithm – 3 machine problem – M machine problem – Graphical method for 2 jobs M machine problems – Heuristic methods.

# UNIT III INVENTORY

Inventory – purpose of inventory – Basic EOQ Model –Quantity discount model – Reorder level – Fixed order quantity inventory system – Periodic review system – ABC analysis – Materials requirement planning – EOQ models under constraints – Purchasing management – Stores management – Just In Time inventory system – Vendor evaluation - Inventory pricing –Supply chain Management – Aggregate planning.

### UNIT IV PROJECT MANAGEMENT

Project network analysis – Activities – Events- critical path method – Method based on time estimates – Programme Evaluation Review Technique –Optimistic, pessimistic time, most likely time - Probability of completion of projects – Time crashing of Projects –Optimum duration and cost.

### UNIT V PLANT ENGINEERING AND WORK STUDY

Plant location – Factors affecting plant location – Break even analysis- Factors weighted rating method – Plant layout- Types- Selection – Plant layout Techniques – Travel chart method – Line balancing method– Work study – method study – Principles of Motion economy – steps in methods study - Charts – Micromotion study-memo motion study – multiple activity charts- therbligs – work measurement – stop watch time study – Production studies – PMTS – Work sampling – Materials handling – Principles – Selection.

### **OUTCOMES:**

Students will be able to

- **CO1**: Select an appropriate forecasting method for a given industry.
- **CO2**: Obtain optimal solutions for sequencing problem in industry.
- CO3: Design a suitable inventory system for any particular industry.
- **CO4**: Use the project management techniques to minimize the project time.
- **CO5**: Design plant layout and materials handling systems and can make use of the concepts of work study for work design.

# **PROCESSING OF POLYMERS AND COMPOSITES**

#### L T P C 3 0 0 3

# **OBJECTIVES:**

- To introduce the various processing methods of polymers.
- To enlighten the students about the different types of fibres and matrix materials.
- To analyse the different polymer matrix composites processing methods and their applications.
- To expose the students to the various metal matrix composite processing methods.
- To analyse the various processing techniques of various ceramic matrix composites.

### UNIT I PROCESSING OF POLYMERS

Chemistry and Classification of Polymers – Properties of Thermo plastics – Properties of Thermosetting Plastics - Extrusion – Injection Moulding – Blow Moulding – Compression and Transfer Moulding – Casting – Thermo Forming. General Machining properties of Plastics – Machining Parameters and their effect – Joining of Plastics – Thermal bonding – Applications.

# UNIT II FIBRES AND MATRIX MATERIALS

Fibres – Fabrication, Structure, properties and applications – Glass fibre, Boron fibre, carbon fibre, organic fibre, ceramic and metallic fibres - whiskers–Fabrication of Matrix materials – polymers, metals and ceramics and their properties – interfaces – Wettability – Types of bonding at the interface – Tests for measuring interfacial strength - Physical and chemical properties.

# UNIT III PROCESSING OF POLYMER MATRIX COMPOSITES

Thermoset matrix composites: hand layup, spray, filament winding, Pultrusion, resin transfer moulding, autoclave moulding - bag moulding, compression moulding with Bulk Moulding Compound and sheet Moulding Compound – thermoplastic matrix composites

– film stacking, diaphragm forming, thermoplastic tape laying, injection moulding – interfaces in PMCs
 - structure, properties and application of PMCs –recycling of PMCs.

Centre for Academic Courses Anna University, Chennai-600 025

#### **UNIT IV PROCESSING OF METAL MATRIX COMPOSITES**

Metallic matrices: aluminium, titanium, magnesium, copper alloys - processing of MMCs: liquid state, Solid state, in situ fabrication techniques - diffusion bonding - powder metallurgy techniquesinterfaces in MMCs – mechanical properties – machining of MMCs – Applications.

#### UNIT V PROCESSING OF CERAMIC MATRIX COMPOSITES AND CARBON-**CARBON COMPOSITES**

Processing of CMCs: cold pressing, sintering, reaction bonding, liquid infiltration, lanxide process - in situ chemical reaction techniques: chemical vapour deposition, chemical vapour impregnation, sol-gel interfaces in CMCs – mechanical properties and applications of CMCs – Carbon-carbon Composites - applications.

# **TOTAL: 45 PERIODS**

**OUTCOMES:** 

Students will be able to

- **CO1**: Get knowledge on various processing methods of polymers.
- **CO2**: Get knowledge about various types of fibres and matrix materials.
- **CO3**: Understand the various polymer matrix composites processing methods.
- **CO4**: Analyse the various processing methods of metal matrix composites.
- **C05**: Analyse the various processing techniques of ceramic matrix composites.

### **GREEN CONCEPTS**

LTPC 3003

### **OBJECTIVES**

- To impart knowledge about air pollution and its effects on the environment.
- To enlighten the students with knowledge about noise and its effects on the environment.
- To enlighten the students with knowledge about water pollution and its effects on the environment.
- To impart the knowledge of fire safety and its production. •
- Attested To impart the knowledge about the need, procedure and benefits of Green-Co rating.

DIRECTOR

9

Centre for Academic Courses Anna University, Chennai-600 025

#### UNIT I AIR POLLUTION SAMPLING AND MEASUREMENT

Primary and Secondary Pollutants, Automobile Pollutants, Industrial Pollution, Ambient air quality Standards, Metrological aspects of air Pollution, Temperature lapse Rates and Stability-wind velocity and turbulence-Pump behaviour dispersion of air Pollutants-solution to the atmosphere dispersion equation-the Gaussian Plume Model, Air pollution sampling-collection of gaseous air pollutants collection of particulate pollutants-stock sampling, analysis of air pollutants-sulphur dioxide-nitrogen dioxide, carbon monoxide, oxidants and ozone

### UNIT II NOISE POLLUTION AND CONTROL

Frequency and Sound Levels, Units of Noise based power radio, contours of Loudness. Effect of human, Environment and properties, Natural and Anthrogenic Noise Sources, Measuring Instruments for frequency and Noise levels, Masking of sound, Types, Kinetics, Selection of different reactors used for waste treatment, Treatment of noise at source, Path and Reception, Sources of noise, Effects of noise-Occupational Health hazards, thermal Comforts, Heat Island Effects, Radiation Effects.

### UNIT III WATER DEMAND AND WATER QUALITY

Factors affecting consumption, Variation, Contaminants in water, Nitrates, Fluorides, Detergents, taste and odour, Radio activity in water, Criteria, for different impurities in water for portable and non portable use, Point and non-point Source of pollution, Major pollutants of Water, Water Quality Requirement for different uses, Global water crisis issues.

### UNIT IV FIRE SAFETY

Basic Elements, Causes, Industrial Fires, Explosions, Effects on Environmental, Property and Human Loss, Prevention technique, Building Design, Fire Protection System, contingency plan, Emergency preparedness, Evacuation.

### UNIT V GREEN CO-RATING

Ecological footprint, Need for Green Co-rating systems, Intent, System approach, Weightage, Assessment Process, types of ratings, Green Co-Benefits, Case studies of Green Co-Rating.

### OUTCOMES:

Students will be able to

- **CO1**: Understand manufacturing processes towards minimization or prevention of air pollution.
- **CO2**: Understand manufacturing processes towards minimization or prevention of noise pollution.
- **CO3**: Understand manufacturing processes towards minimization or prevention of water pollution.
- **CO4** : Presenting the knowledge of fire safety and its production.

**CO5** : Predicting green co-rating and its benefits.

#### MANUFACTURING OF AUTOMOTIVE COMPONENTS

#### **OBJECTIVES:**

- To introduce the students about the requirement of materials for automobile components
- To familiarize students on typical materials used in manufacturing of automobile components
- To impart knowledge on material and manufacturing techniques of piston, valves and battery parts
- To impart knowledge on material and manufacturing techniques of engine blocks, cables and locks in automobile.
- To impart knowledge on material and manufacturing techniques of general transmission parts of automobile

#### UNIT I MATERIAL NEEDS IN AUTOMOBILE

manufacturing of automobile silencer.

Requirements of materials in automotive tests - recycling and life cycle consideration. Current materials in use and their future. Advanced in manufacturing and joining techniques. Technical problems and solutions for use of magnesium alloys in automotive industry. Most commonly used composite moulding processes. Renewable materials, barriers and incentives in use of biocomposites - composite materials and their automotive applications.

#### UNIT II MATERIALS AND TECHNOLOGIES FOR AUTOMOBILE

Introduction - steel sheets - high strength steel sheet - "Nano-Hilen" - "BHT" - high strength galvannealed steel sheets - development of inorganic type high lubrication galvannealed steel sheets - organic solid lubricant technology - uses of aluminium in automobiles - uses of plastics in automobiles.

#### UNIT III MANUFACTURING OF PISTON, VALVES AND BATTERY PARTS 10 Introduction - manufacturing of auto piston - manufacturing of pins for automobiles - manufacturing of piston rings - manufacturing of lead storage battery. Manufacturing of valve and valve set -

#### **UNIT IV** MANUFACTURING OF ENGINE BLOCK, CABLES AND LOCKS

Manufacturing of automobile chain - manufacturing of cylindrical block. Manufacturing of cylinder liner - manufacturing of automobile control cable - manufacturing of engine moulding pad manufacturing of auto locks.

#### MANUFACTURING OF TRANSMISSION PARTS UNIT V

10 Manufacturing of automobile chassis and other technologies. Manufacturing of automobile body -Manufacturing of disc brake - Manufacturing of brake drum - Manufacturing of gear blank -Manufacturing of gear - casting method - forming method - powder metallurgy - Manufacturing of gear box housing - Manufacturing process of leaf spring - Manufacturing process of automotive tyres - Manufacturing of auto tubes and flaps. Heat treatment of automobile components - forging technologies of automobile parts - Manufacturing of Torque Converters- painting technology of automobiles - Role of Nanotechnology in Automotive Industries.

# **TOTAL: 45 PERIODS**

### OUTCOMES:

The students will

**CO1**: Have the knowledge about material requirements, its recycling and life cycle aspects.

**CO2**: Gain an insight over the latest materials adopted in automobile manufacture.

- **CO3**: Have the knowledge of methods adopted in manufacture of piston, valves and battery parts.
- CO4: Know the methods of manufacturing engine block, cables and locks in automobile.

**CO5**: Have the idea of various manufacturing methods of automobile structure, transmission parts.

FINANCIAL MANAGEMENT

L T P C 3 0 0 3

### **OBJECTIVES:**

- To introduce the concepts of financial accounting.
- To introduce the various functions of financial management to handle higher level financial decisions.
- To gain the knowledge about concepts of financial and various budgeting and cost accounting.
- To develop the knowledge in the field of capital budgeting and cost accounting.
- To gain the knowledge about financial management techniques to make a profit.

### UNIT I FINANCIAL ACCOUNTING

Accounting concepts – Business transaction – Assets- Viabilities – Roumers equity-Assets – types – Financial statements – Income statement – Balance sheets – sources of finance – Internal sources – External sources – Equity capital – Dept capital .

### UNIT II FINANCIAL MANAGEMENT

Functions of finance department – Purpose of finance – capital – Types – Working Capital – Sources of working capital – Working capital management – Grow working capital – Net working capital – Operating cycle – Working capital financing policy – cash management – Management of accounts relievable – Inventory pricing – Dividend policy – capital structure .

### UNIT III CAPITAL BUDGETING

Evaluation of alternate investment criteria – Methods of capital budgeting – Pay Back Method – Accounting rate of return method – Present value method – Benefit cost ratio - Net Benefit cost ratio – Internal rate of return – Cost of capital – Determination of interest rate .

DIRECTOR

9

9

### UNIT IV COST ACCOUNTING

Cost accounting and cost estimation – Difference – Aims and objectives of cost estimation and cost accounting – Elements of cost – Components of cost – Estimation of material cost - labor cost – Overheads – Types - Factory overheads - Administrative overheads – selling overheads - Distribution overheads – Fixed overheads and Fluctuating overheads.

#### UNIT V DEPRECIATION AND PROFIT PLANNING

Depreciation – causes of depreciation - Methods of depreciation – Straight line method Declining balance method – sum of the years digit method – sinking fund method- Annuity method – Repair provision method – Profit planning – Fixed cost – Variable cost – Selling price – Breakeven analysis – Breakeven volume – Angle of Incidence – Margin of safety - Multiproduct Breakeven analysis – Effect of changes in Selling price , Fixed cost , Variable cost on Breakeven volume , Margin of safety , angle Incidence.

#### **TOTAL: 45 PERIODS**

### OUTCOMES:

Students will be able to

- **CO1 :** Train in various functions of finance such as working capital management, current assets managements to make investment decisions.
- CO2: Handle the highest level financial decisions.
- CO3: Work in a capital financing policy and handle the cash management.
- **CO4 :** Perform the various method in capital budgeting, understand and analyse different costs involved in financial managements.
- **CO5**: Make investment decisions when they take up senior managerial position.

#### SURFACE ENGINEERING AND COATINGS

L T P C 3 0 0 3

Attested

#### **OBJECTIVES:**

- To impart knowledge on friction.
- To understand wear and measurement methods.
- To understand corrosion and combating methods.
- To learn various techniques to cure corrosion, wear and friction using surface treatments.
- To familiarize the real friction, wear and corrosion combating methods.

DIRECTOR

Centre for Academic Courses Anna University, Chennai-600 025

# UNIT I FRICTION

Topography of Surfaces – Surface features – Properties and measurement – Surface interaction – Adhesive Theory of Sliding Friction – Rolling Friction – Friction properties of metallic and non-metallic materials – Friction in extreme conditions – Thermal considerations in sliding contact

### UNIT II WEAR

Introduction – Abrasive wear, Erosive, Cavitation, Adhesion, Fatigue wear and Fretting Wear- Laws of wear – Theoretical wear models – Wear of metals and non metals - International standards in friction and wear measurements

# UNIT III CORROSION

Introduction – Principle of corrosion – Classification of corrosion – Types of corrosion – Factors influencing corrosion – Testing of corrosion – In-service monitoring, Simulated service, Laboratory testing – Evaluation of corrosion – Prevention of Corrosion – Material selection, Alteration of environment, Design, Cathodic and Anodic Protection, Corrosion inhibitors

# UNIT IV SURFACE TREATMENTS

Introduction – Surface properties, Superficial layer – Changing surface metallurgy – Wear resistant coatings and Surface treatments – Techniques – PVD – CVD – Physical CVD – Ion implantation – Surface welding – Thermal spraying – Laser surface hardening and alloying, Applications of coatings and surface treatments in wear and friction control – Characteristics of Wear resistant coatings – New trends in coating technology – DLC – CNC – Thick coatings – Nano-engineered coatings – Other coatings, Corrosion resistant coatings

# UNIT V CASE STUDIES ON TRIBOLOGY AND CORROSION

Bio-fouling, Tribology and corrosion applicable in biomedical implants, Nano Tribology –electronic devices, hot corrosion in power plants – corrosion in nuclear industry –Machining through controlled Wear and corrosion.

# TOTAL: 45 PERIODS

### OUTCOMES:

Students will be able to

- **CO1**: Understand the surface engineering and surface modification methods that will come in handy to solve the industrial problems.
- **CO2**: Examining related to various materials failure due to friction, wear and corrosion.
- **CO3**: Predicting the surface problems and select a suitable surface treatment.
- **CO4**: Integrating case studies in various applications related to surface engineering.
- **CO5**: Learn various process and techniques developed for surface treatment.

### SOLID FREEFORM MANUFACTURING

9

9

9

#### **OBJECTIVES:**

- To acquaint the students with evolution of Solid Freeform Manufacturing (SFM) / Additive Manufacturing (AM), proliferation into various fields and its effects on supply chain.
- To gain knowledge on Design for Additive Manufacturing (DFAM) and its importance in quality improvement of fabricated parts.
- To acquaint with polymerization and sheet lamination processes and their applications.
- To acquaint with material extrusion and powder bed fusion processes.
- To gain knowledge on jetting and direct energy deposition processes and their applications.

# UNIT I INTRODUCTION

Need - Development of SFM systems – Hierarchical structure of SFM - SFM process chain – Classification – Applications. Case studies: Bio printing- Food Printing- Electronics printing – Rapid Tooling - Building printing. AM Supply chain. Economics aspect: Strategic aspect- Operative aspect.

# UNIT II DESIGN FOR ADDITIVE MANUFACTURING

Concepts and Objectives - AM Unique Capabilities - Part Consolidation - Topology Optimization -Lightweight Structures - DFAM for Part Quality Improvement - CAD Modeling - Model Reconstruction - Data Processing for AM - Data Formats - Data Interfacing - Part Orientation -Support Structure Design and Support Structure Generation - Model Slicing - Tool Path Generation. Design Requirements of Additive Manufacturing: For Part Production, For Mass Production, For Series Production. Case Studies.

# UNIT III VAT POLYMERIZATION AND SHEET LAMINATION PROCESSES 9

Stereolithography Apparatus (SLA): Principles – Photo Polymerization of SL Resins - Pre Build Process – Part-Building and Post-Build Processes - Part Quality and Process Planning, Recoating Issues - Materials - Advantages - Limitations and Applications. Digital Light Processing (DLP) - Materials - Process - Advantages and Applications.

Laminated Object Manufacturing (LOM): Working Principles - Process - Materials, Advantages, Limitations and Applications. Ultrasonic Additive Manufacturing (UAM) - Process - Parameters - Applications. Case Studies.

# UNIT IV MATERIAL EXTRUSION AND POWDER BED FUSION PROCESSES

Fused deposition Modeling (FDM): Working Principles - Process - Materials and Applications. Design Rules for FDM.

Selective Laser Sintering (SLS): Principles - Process - Indirect and Direct SLS - Powder Structure – Materials - Surface Deviation and Accuracy - Applications. Multijet Fusion.

Selective Laser Melting (SLM) and Electron Beam Melting (ÉBM): Principles – Processes – Materials – Advantages - Limitations and Applications. Case Studies.

# UNIT V JETTING AND DIRECT ENERGY DEPOSITION PROCESSES

Binder Jetting: Three dimensional Printing (3DP): Principles – Process - Physics of 3DP - Types of printing: Continuous mode – Drop on Demand mode - Process – Materials - Advantages - Limitations - Applications.

Material Jetting: Multi Jet Modelling (MJM) - Principles - Process - Materials - Advantages and Limitations.

Laser Engineered Net Shaping (LENS): Processes- Materials- Advantages - Limitations and Applications. Case Studies.

TOTAL: 45 PERIODS

DIRECTOR

Centre for Academic Courses Anna University, Chennai-600 025

# COURSE OUTCOMES:

At the end of this course, the students shall be able to:

- CO1: Recognize the importance in the evolution of SFM/AM, proliferation into the various fields and its effects on supply chain.
- CO2: Evaluate the design for AM and its importance in the quality of fabricated parts.
- CO3: Acquire knowledge on principles and applications of polymerization and sheet lamination processes with case studies.
- CO4: Acquire knowledge on principles of material extrusion and powder bed fusion processes and design guidelines.
- CO5: Perceive jetting and direct energy deposition processes and their applications.

L T P C 3 0 0 3

#### **OBJECTIVES:**

- To gain the knowledge about principles of foundry
- To gain the knowledge about principles of casting technology
- To gain the knowledge about principles of Moulding technology.
- To familiarize the casting of ferrous and non ferrous alloys
- To know the advanced casting technology.

### UNIT I PATTERN MAKING, MOULDING AND CORE MAKING

Pattern materials-Pattern allowances-Pattern layout, pattern making – Moulding sands – Ingredients – Specification and testing of moulding sands – classification of moulding sands – Sand J conditioning –Characteristics of cores and core sands – types of cores

DIRECTOR

9

Centre for Academic Courses Anna University, Chennai-600 025

#### UNIT II SOLIDIFICATION AND GATING

Solidification principles - planar and dendritic solidification - constitutional super cooling - Freezing of a pure metal -Freezing of alloys - Properties related to freezing mechanism- Directional solidification - progressive solidification - Gates and risers-their functions - types-design principles, design of gating and riser - illustrative problems in riser and gating design-

#### UNIT III MOULDING METHODS AND QUALITY CONTROL

Green sand moulding-dry sand moulding-CO2 moulding-no bake moulding- shell moulding, investment casting- permanent moulding-die casting - centrifugal casting-continuous casting-Defects in casting - Inspection and testing of castings - fettling and heat treatment of castings

#### **UNIT IV** CASTING OF FERROUS AND NON FERROUS ALLOYS

Melting equipment for foundries - Types of furnaces - Refractories for melting units -Casting of Aluminium, Magnesium, Copper and their alloys - Casting of steel, cast iron and gray iron

#### UNIT V **ADVANCES IN CASTING**

Rheocasting - Thixo casting - magnetic moulding - Impulse moulding- high pressure moulding -Stir casting - Squeeze casting - Application of ultrasonic cavitations to develop composites mechanization and automation of foundries - Application of computers in foundries- product design and analysis- casting design and simulation - software packages for foundry use- pollution control in foundries - energy saving in foundries.

# **TOTAL: 45 PERIODS**

# OUTCOMES:

Students will be able to

- **CO1**: Imply the techniques to make the pattern, core and moulding.
- **CO2**: Evaluate the process parameters involved in casting processes.
- **CO3**: Identify the appropriate casting techniques for various materials.
- **CO4**: Know about various equipments and furnaces used in casting process.
- **CO5**: Grasp the significance of advanced casting process and its applications.

#### MANUFACTURING MANAGEMENT

#### OBJECTIVES

- 1. Students will be able to study the concepts in facility planning.
- 2. Students will be able to study types of plant layout and capacity planning methods.
- 3. Students will be able to study the concepts of Project management.
- 4. Students will be able to study the concepts and methods in production planning and control.
- 5. Students will be able to study the concepts in Inventory and maintenance management.

### UNIT-I FACILITY PLANNING

Facility planning – Factors affecting selection of plant location, Factor rating analysis: Break – even analysis, Load distance model, closeness ratings – case study

# UNIT-II CAPACITY & LAYOUT PLANNING

Types of plant layout, criteria for good layout, Process layout, Assembly line balancing. Computer based solutions to layout problems such as CRAFT, ALDEP, CORELAP and PREP. Capacity planning – Analysis of designed capacity, installed capacity, commissioned capacity, utilized capacity, factors affecting productivity and capacity expansion strategies.

# UNIT-III PROJECT MANAGEMENT

Demand forecasting – Quantitative and qualitative techniques, measurement of forecasting errors, Project management – its role in functional areas of management, network representation of a project, CPM and PERT techniques – case study

# UNIT-IV PRODUCTION PLANNING & CONTROL

Aggregate production planning, production planning strategies, Disaggregating the aggregate plan, Materials Requirement Planning (MRP), MRP-II, Supply chain management, Operation scheduling, prioritization.

### UNIT-V INVENTORY AND MAINTENANCE MANAGEMENT

Introduction to EOQ models, Inventory control techniques – ABC, FSN, VED etc. Types of inventory control – Perpetual, two-bin and periodic inventory system – JIT, SMED, Kanban, Zero inventory, Maintenance strategies and planning, Maintenance economics: quantitative analysis, optimal number of machines, Replacement strategies and policies – economic service life, opportunity cost, replacement analysis using specific time period.

### OUTCOMES:

On Completion of the course the student will be able to

- 1. Able to acquire knowledge on facility, and problems associated with it.
- 2. Ability to learn the various capacity and layout planning models
- 3. Understand the concepts of demand forecasting and project management with relevant case studies.
- 4. Able to understand the concepts of production planning and scheduling.
- 5. Understand the various inventory and maintenance management techniques.

#### INDUSTRIAL DESIGN AND ERGONOMICS

#### L T P C 3 0 0 3

### **OBJECTIVES**

- To introduce to industrial design based on ergonomics.
- To consider ergonomics concept in manufacturing
- To apply ergonomics in design of controls and display.
- To apply environmental factors in ergonomics design.
- To understand aesthetics applicable to manufacturing and product

### UNIT I INTRODUCTION

An approach to industrial design, Elements of design structure for industrial design in engineering application in modern manufacturing systems- Ergonomics and Industrial Design: Introduction to Ergonomics, Communication system, general approach to the man-machine relationship, Human component of work system, Machine component of work system, Local environment-light, Heat, Sound.

### UNIT II ERGONOMICS AND PRODUCTION

Introduction, Anthropometric data and its applications in ergonomic, working postures, Body Movements, Work Station Design, Chair Design. Visual Effects of Line and Form: The mechanics of seeing, Psychology of seeing, Figure on ground effect, Gestalt's perceptions - Simplicity, Regularity, Proximity, Wholeness. Optical illusions, Influences of line and form.

Centre for Academic Courses Anna University, Chennai-600 025

#### 58

9

#### UNIT III **DESIGN PRINCIPLES FOR DISPLAY AND CONTROLS**

Displays: Design Principles of visual Displays, Classification, Quantitative displays, Qualitative displays, check readings, Situational awareness, Representative displays, Design of pointers, Signal and warning lights, colour coding of displays, Design of multiple displays Controls: Design considerations, Controls with little efforts - Push button, Switches, rotating Knobs. Controls with muscular effort - Hand wheel, Crank, Heavy lever, Pedals. Design of controls in automobiles, Machine Tools

#### **UNIT IV ENVIRONMENTAL FACTORS**

Colour: Colourand light, Colour and objects, Colour and the eye – after Image, Colour blindness, Colour constancy, Colour terms - Colour circles, Munsel colour notation reactions to colour and colour combination - colour on engineering equipments, Colour coding, Psychological effects, colour and machine form. colour and style

#### UNIT V **AESTHETIC CONCEPTS**

Concept of unity, Concept of order with variety, Concept of purpose, Style and environment, Aesthetic expressions - Symmetry, Balance, Contrast, Continuity, Proportion. Style - The components of style, House style, Style in capital good. Introduction to Ergonomic and plant layout softwares.

### OUTCOMES

Students at the end of course will be able to

- **CO1**: Appreciate ergonomics need in the industrial design.
- CO2: Apply ergonomics in creation of manufacturing system
- CO3: Discuss on design of controls and display.
- **CO4**: Consider environmental factors in ergonomics design.
- **CO5**: Report on importance of aesthetics to manufacturing system and product

#### **INDUSTRY 4.0 AND INTERNET OF THINGS**

10

8

#### COURSE OBJECTIVES

- To introduce and familiarize the industry 4.0 and its physical structure and interconnectivity.
- To understand the architecture, IOT and its protocols
- To outline the cloud computing and data analytics
- To familiar the concepts of integrated IOT.
- To learn the IOT, cloud computing, data analytics and Industry 4.0

# UNIT - I INDUSTRY 4.0

Digitalization and the Networked Economy - Introduction to Industry 4.0 - Comparison of Industry 4.0 Factory and Today's Factory - Internet of Things (IoT) - Industrial Internet of Things (IIoT) - Smart Devices and Products - Smart Logistics - Support System for Industry 4.0 - Cyber-physical Systems Requirements - Data as a New Resource for Organizations - Cloud Computing - Trends of Industrial Big Data and Predictive Analytics for Smart Business- Architecture of Industry 4.0.

### UNIT - II IOT AND ITS PROTOCOLS

Definitions and Functional Requirements – Motivation – Architecture - Web 3.0 View of IoT – Ubiquitous IoT Applications – Four Pillars of IoT – DNA of IoT - The Toolkit approach for End - User Participation in the Internet of Things. Middleware for IoT: Overview – Communication Middleware for IoT – IoT Information Security. IIoT Reference Architecture - Designing Industrial Internet Systems - Access Network Technology and Protocols Standardization for IoT – Efforts – M2M and WSN Protocols – SCADA and RFID Protocols – Issues with IoT Standardization – Unified Data Standards – Protocols – IEEE 802.15.4 – BAC Net Protocol – Modbus –KNX – Zigbee Architecture – Network layer APS layer – Security.

### UNIT - III CLOUD COMPUTING

Web of Things versus Internet of Things – Two Pillars of the Web – Architecture Standardization for WoT – Platform Middleware for WoT – Unified Multitier WoT Architecture – WoT Portals and Business Intelligence. Cloud of Things: Grid/SOA and Cloud Computing – Cloud Middleware – Cloud Standards – Cloud Providers and Systems – Mobile Cloud Computing – The Cloud of Things Architecture and Data Analytics

### UNIT - VI INTEGRATED IOT

Integrated Billing Solutions in the Internet of Things Business Models for the Internet of Things -Network Dynamics: Population Models – Information Cascades - Network Effects - Network Dynamics: Structural Models - Cascading Behavior in Networks - The Small - World Phenomenon

# UNIT - V APPLICATIONS

The Role of the Internet of Things for Increased Autonomy and Agility in Collaborative Production Environments - Resource Management in the Internet of Things: Clustering, Synchronization and Software Agents - Industry 4.0 in Car Manufacturing – Electronics Manufacturing – IOT Based Building Automation - Agricultural Automation.

### **COURSE OUTCOMES**

Upon completion of this course, the students will be able to:

**CO1:** Realize the need of industry 4.0 and its inter-connectivity.

**CO2:** Interpret the architecture of IOT and its protocols

- CO3: Recognize the uses of cloud computing and data analytics
- **CO4:** Familiar the concepts of integrated IOT.

**CO5:** Plan the uses of IOT, cloud computing, data analytics and Industry 4.0 technologies.

#### MN5016 DESIGN OF MANUFACTURING TOOLS, JIGS AND FIXTURES

#### **OBJECTIVES**

- To introduce to fundamentals of Jigs and Fixtures and tool materials.
- To understand geometrical features and design of cutting tools.
- To introduce the design steps of tools for metal forming operation.
- To learn the design process of clamping, locator and fixtures.
- To familiarize the design process of Jigs and tool guides

### UNIT I INTRODUCTION

Introduction, The design procedure, Drafting and design techniques in tooling drawing. Tooling Materials and Heat Treatment: Introduction, Properties of materials, Ferrous tooling materials, Non-ferrous tooling materials, Non-metallic tooling materials, Heat treatment and tool design. Introduction to Jigs and Fixtures: Definition, Differences between Jigs and Fixtures, principles of Jigs and Fixtures.

### UNIT II DESIGN OF CUTTING AND METROLOGY TOOLS

Introduction to metal cutting process and tools, Revision of metal cutting tools-Single point cutting tools, Milling cutters, Drills and Drilling, Reamers, Taps. Selection of carbide tools, determining the insert thickness for carbide tools. Introduction to Design of Tools for Inspection and Gauging, Geometrical Dimensioning and Tolerance, Work piece quality criteria, Principles of gauging, Types of gages and their applications, Amplification and magnification of error, Gage Tolerances, Indicating gages, Automatic gages, Gauging positional tolerance parts, problems.

DIRECTOR

Centre for Academic Courses Anna University, Chennai-600 025

9

9

LTPC

#### UNIT III **DESIGN OF PRESS TOOLS**

Design of Press-working Tools: Power presses, Cutting operations, Types of die-cutting operations - and their design. Evolution of blanking and progressive blanking. Design of Sheet Metal Bending. Forming and Drawing Dies: Introduction, Bending dies, Forming dies, and Drawing dies. Evolution of a draw die, Progressive dies. Strip development for progressive dies, Examples of progressive dies. Extrusion dies, Drop forging dies and auxiliary tools.

#### **UNIT IV** DESIGN OF CLAMPS LOCATING METHODS AND FIXTURES

Locating and Clamping Methods: Introduction, Basic principle of location, Locating methods and devices, Basic principle of clamping. Principles of Location: Six degrees of freedom, Duty of the location system, Choice of location system, redundant location, 3-2-1 Location, Types and methods of location. Principles of Clamping: Requirements of the clamping system, Position of the clamps. Design of clamps. Types of clamps: Cam clamp. Toggle clamp. General Principles Of Milling, Lathe, Boring, Broaching And Grinding Fixtures – Assembly, Inspection And Welding Fixtures – Modular Fixturing Systems- Quick Change Fixtures.

#### UNIT V **DESIGN OF JIGS AND TOOL GUIDES**

Types Of Jigs --plate Jig, Box Jig, Leaf Jig, Channel Jig, Post, Turnover, Channel, Latch, Pot, Angular Post Jigs - Indexing Jigs - Design of Drill Jigs: Introduction, Types of drill jigs. General considerations in the design of drill jigs, Drill bushings, Methods of construction. Guiding Elements: Introduction, Guiding the tools, Types of drill bushes.

# OUTCOMES

Students at the end of course will be able to

- CO1 : Discuss on fundamentals Jigs and Fixtures and tool materials.
- CO2: Brief on geometrical features and design of cutting tools.
- **CO3**: Understand the design steps of tools for metal forming operation.
- **CO4**: Carryout design process for clamping, locator and fixtures.
- CO5: To design of Jigs and tool guides

#### **OBJECTIVES:**

- · Learn to solve integer programming problems
- To know how to solve the Dynamic programming problems
- Learn to solve non linear programming problems with un constrained optimization problems
- Understand to solve non-linear programming problems using KKT conditions, quadratic and separable programming
- To create awareness of Meta heuristic algorithms.

### UNIT I INTEGER PROGRAMMING

Branch and Bound technique –cutting plane algorithm method - Travelling Salesman problem - Traveling Salesman Problem - Branch and Bound Algorithms for TSP - Heuristics for TSP - Chinese Postman Problem - Vehicle Routeing Problem

### UNIT II DYNAMIC PROGRAMMING

Characteristics of Dynamic Programming Problems - Deterministic Dynamic Programming - Forward and Backward recursive recursion – selected dynamic programming application – investment model – inventory model – replacement model – reliability model – stage coach problem.

### UNIT III NONLINEAR PROGRAMMING - I:

Types of Nonlinear Programming Problems - One-Variable Unconstrained Optimization - Multivariable Unconstrained Optimization -

# UNIT IV NONLINEAR PROGRAMMING – II:

The Karush-Kuhn-Tucker (KKT) Conditions for Constrained Optimization - Quadratic Programming - Separable Programming - Convex Programming - Nonconvex Programming

### UNIT V NON-TRADITIONAL OPTIMIZATION

Overview of Genetic algorithms, Simulated Annealing, neural network based optimization. Particle Swarm optimization, Ant Colony Optimization, Optimization of Fuzzy Systems. TOTAL: 45 PERIODS

### OUTCOMES:

CO1: Know how to solve integer programming problems

CO2: Able to solve Dynamic programming problems

CO3: Familiar in solving unconstrained non linear optimization problems

CO4: Familiar in solving constrained liner optimization problems

CO5: Know how to solve non linear optimization problems using Meta heuristic algorithms

### **OPEN ELECTIVE COURSES (OEC)**

#### OE5091

# **BUSINESS DATA ANALYTICS**

#### L T PC 3003

### COURSE OBJECTIVES:

- To understand the basics of business analytics and its life cycle.
- To gain knowledge about fundamental business analytics.
- To learn modeling for uncertainty and statistical inference.
- To understand analytics using Hadoop and Map Reduce frameworks.
- To acquire insight on other analytical frameworks.

### UNIT I OVERVIEW OF BUSINESS ANALYTICS

Introduction – Drivers for Business Analytics – Applications of Business Analytics: Marketing and Sales, Human Resource, Healthcare, Product Design, Service Design, Customer Service and Support – Skills Required for a Business Analyst – Framework for Business Analytics Life Cycle for Business Analytics Process.

#### Suggested Activities:

- Case studies on applications involving business analytics.
- Converting real time decision making problems into hypothesis.
- Group discussion on entrepreneurial opportunities in Business Analytics.

#### Suggested Evaluation Methods:

- Assignment on business scenario and business analytical life cycle process.
- Group presentation on big data applications with societal need.
- Quiz on case studies.

### UNIT II ESSENTIALS OF BUSINESS ANALYTICS

Descriptive Statistics – Using Data – Types of Data – Data Distribution Metrics: Frequency, Mean, Median, Mode, Range, Variance, Standard Deviation, Percentile, Quartile, z-Score, Covariance, Correlation – Data Visualization: Tables, Charts, Line Charts, Bar and Column Chart, Bubble Chart, Heat Map – Data Dashboards.

#### Suggested Activities:

- Solve numerical problems on basic statistics.
- Explore chart wizard in MS Excel Case using sample real time data for data visualization.
- Use R tool for data visualization.

DIBECTOR

Centre for Academic Courses Anna University, Chennai-600 025

9

### Suggested Evaluation Methods:

- Assignment on descriptive analytics using benchmark data.
- Quiz on data visualization for univariate, bivariate data. •

#### UNIT III MODELING UNCERTAINTY AND STATISTICAL INFERENCE

9 Modeling Uncertainty: Events and Probabilities – Conditional Probability – Random Variables – Discrete Probability Distributions - Continuous Probability Distribution - Statistical Inference: Data Sampling – Selecting a Sample – Point Estimation – Sampling Distributions – Interval Estimation – Hypothesis Testing.

### **Suggested Activities:**

- Solving numerical problems in sampling, probability, probability distributions and hypothesis testing.
- Converting real time decision making problems into hypothesis.

# **Suggested Evaluation Methods:**

- Assignments on hypothesis testing.
- · Group presentation on real time applications involving data sampling and hypothesis testing.
- Quizzes on topics like sampling and probability.

#### UNIT IV ANALYTICS USING HADOOP AND MAPREDUCE FRAMEWORK

Introducing Hadoop - RDBMS versus Hadoop - Hadoop Overview - HDFS (Hadoop Distributed File System) - Processing Data with Hadoop - Introduction to MapReduce - Features of MapReduce - Algorithms Using Map-Reduce: Matrix-Vector Multiplication, Relational Algebra Operations, Grouping and Aggregation – Extensions to MapReduce.

### Suggested Activities:

- Practical Install and configure Hadoop.
- Practical Use web based tools to monitor Hadoop setup.
- Practical Design and develop MapReduce tasks for word count, searching involving text corpus etc.

# **Suggested Evaluation Methods:**

- Evaluation of the practical implementations.
- Quizzes on topics like HDFS and extensions to MapReduce.

#### UNIT V OTHER DATA ANALYTICAL FRAMEWORKS

Overview of Application development Languages for Hadoop - PigLatin - Hive - Hive Query Language (HQL) - Introduction to Pentaho, JAQL - Introduction to Apache: Sqoop, Drill and Spark, Cloudera Impala – Introduction to NoSQL Databases – Hbase and MongoDB.

# Suggested Activities:

- Practical Installation of NoSQL database like MongoDB.
- Practical Demonstration on Sharding in MongoDB.
- Practical Install and run Pig
- Practical Write PigLatin scripts to sort, group, join, project, and filter data.
- Design and develop algorithms to be executed in MapReduce involving numerical methods for analytics.

### **Suggested Evaluation Methods:**

Mini Project (Group) - Real time data collection, saving in NoSQL, implement analytical techniques using Map-Reduce Tasks and Result Projection. thes

**TOTAL: 45 PERIODS** 

DIRECTOR

9

### COURSE OUTCOMES:

On completion of the course, the student will be able to:

- Identify the real world business problems and model with analytical solutions.
- Solve analytical problem with relevant mathematics background knowledge.
- Convert any real world decision making problem to hypothesis and apply suitable statistical testing.
- Write and Demonstrate simple applications involving analytics using Hadoop and MapReduce
- Use open source frameworks for modeling and storing data.
- Apply suitable visualization technique using R for visualizing voluminous data.

### OE5092

INDUSTRIAL SAFETY

### COURSE OBJECTIVES:

- Summarize basics of industrial safety
- Describe fundamentals of maintenance engineering
- Explain wear and corrosion
- Illustrate fault tracing
- Identify preventive and periodic maintenance

# UNIT I INTRODUCTION

Accident, causes, types, results and control, mechanical and electrical hazards, types, causes and preventive steps/procedure, describe salient points of factories act 1948 for health and safety, wash rooms, drinking water layouts, light, cleanliness, fire, guarding, pressure vessels, etc, Safety color codes. Fire prevention and firefighting, equipment and methods.

### UNIT II FUNDAMENTALS OF MAINTENANCE ENGINEERING

Definition and aim of maintenance engineering, Primary and secondary functions and responsibility of maintenance department, Types of maintenance, Types and applications of tools used for maintenance, Maintenance cost & its relation with replacement economy, Service life of equipment.

### UNIT III WEAR AND CORROSION AND THEIR PREVENTION

Wear- types, causes, effects, wear reduction methods, lubricants-types and applications, Lubrication methods, general sketch, working and applications, i. Screw down grease cup, ii. Pressure grease gun, iii. Splash lubrication, iv. Gravity lubrication, v. Wick feed lubrication via Side feed lubrication, vii. Ring lubrication, Definition, principle and factors affecting the corrosion. Types of corrosion, corrosion prevention methods.

DIRECTOR

Centre for Academic Courses Anna University, Chennai-600 025

L T PC 3 0 0 3

9

9

#### **UNIT IV** FAULT TRACING

Fault tracing-concept and importance, decision tree concept, need and applications, sequence of fault finding activities, show as decision tree, draw decision tree for problems in machine tools, hydraulic, pneumatic, automotive, thermal and electrical equipment's like, I. Any one machine tool, ii. Pump iii. Air compressor, iv. Internal combustion engine, v. Boiler, vi. Electrical motors, Types of faults in machine tools and their general causes.

#### UNIT V PERIODIC AND PREVENTIVE MAINTENANCE

Periodic inspection-concept and need, degreasing, cleaning and repairing schemes, overhauling of mechanical components, overhauling of electrical motor, common troubles and remedies of electric motor, repair complexities and its use, definition, need, steps and advantages of preventive maintenance. Steps/procedure for periodic and preventive maintenance of: I. Machine tools, ii. Pumps, iii, Air compressors, iv. Diesel generating (DG) sets, Program and schedule of preventive maintenance of mechanical and electrical equipment, advantages of preventive maintenance. Repair cycle concept and importance

# **TOTAL: 45 PERIODS**

# COURSE OUTCOMES:

CO1: Ability to summarize basics of industrial safety

CO2: Ability to describe fundamentals of maintenance engineering

CO3: Ability to explain wear and corrosion

CO4: Ability to illustrate fault tracing

CO5: Ability to identify preventive and periodic maintenance

#### **OPERATIONS RESEARCH**

#### LTPC 3003

### COURSE OBJECTIVES:

- Solve linear programming problem and solve using graphical method.
- Solve LPP using simplex method
- Solve transportation, assignment problems •
- Solve project management problems
- Solve scheduling problems

# Ittested

67

DIRECTOR Centre for Academic Courses Anna University, Chennai-600 025

#### 68

# UNIT I LINEAR PROGRAMMING

Introduction to Operations Research – assumptions of linear programming problems - Formulations of linear programming problem – Graphical method

# UNIT II ADVANCES IN LINEAR PROGRAMMING

Solutions to LPP using simplex algorithm- Revised simplex method - primal dual relationships – Dual simplex algorithm - Sensitivity analysis

# UNIT III NETWORK ANALYSIS – I

Transportation problems -Northwest corner rule, least cost method,Voges's approximation method - Assignment problem -Hungarian algorithm

# UNIT IV NETWORK ANALYSIS – II

Shortest path problem: Dijkstra's algorithms, Floyds algorithm, systematic method -CPM/PERT

# UNIT V NETWORK ANALYSIS – III

Scheduling and sequencing - single server and multiple server models - deterministic inventory models - Probabilistic inventory control models

# TOTAL : 45 PERIODS

# COURSE OUTCOMES:

CO1: To formulate linear programming problem and solve using graphical method.

CO2: To solve LPP using simplex method

CO3: To formulate and solve transportation, assignment problems

CO4: To solve project management problems

CO5: To solve scheduling problems

# OE5094 COST MANAGEMENT OF ENGINEERING PROJECTS

L T P C 3 0 0 3

# **OBJECTIVES:**

- Summarize the costing concepts and their role in decision making
- Infer the project management concepts and their various aspects in selection
- Interpret costing concepts with project execution
- Develop knowledge of costing techniques in service sector and various budgetary control techniques
- Illustrate with quantitative techniques in cost management

Centre for Academic Courses Anna University, Chennai-600 025

# 9

9

9

9

# UNIT I INTRODUCTION TO COSTING CONCEPTS

Objectives of a Costing System; Cost concepts in decision-making; Relevant cost, Differential cost, Incremental cost and Opportunity cost; Creation of a Database for operational control.

# UNIT II INTRODUCTION TO PROJECT MANAGEMENT

Project: meaning, Different types, why to manage, cost overruns centres, various stages of project execution: conception to commissioning. Project execution as conglomeration of technical and nontechnical activities, Detailed Engineering activities, Pre project execution main clearances and documents, Project team: Role of each member, Importance Project site: Data required with significance, Project contracts.

# UNIT III PROJECT EXECUTION AND COSTING CONCEPTS

Project execution Project cost control, Bar charts and Network diagram, Project commissioning: mechanical and process, Cost Behavior and Profit Planning Marginal Costing; Distinction between Marginal Costing and Absorption Costing; Break-even Analysis, Cost-Volume-Profit Analysis, Various decision-making problems, Pricing strategies: Pareto Analysis, Target costing, Life Cycle Costing.

### UNIT IV COSTING OF SERVICE SECTOR AND BUDGETERY CONTROL

Just-in-time approach, Material Requirement Planning, Enterprise Resource Planning, Activity-Based Cost Management, Bench Marking; Balanced Score Card and Value-Chain Analysis, Budgetary Control: Flexible Budgets; Performance budgets; Zero-based budgets.

# UNIT V QUANTITATIVE TECHNIQUES FOR COST MANAGEMENT

Linear Programming, PERT/CPM, Transportation problems, Assignment problems, Learning Curve Theory.

# COURSE OUTCOMES:

- CO1 Understand the costing concepts and their role in decision making
- CO2–Understand the project management concepts and their various aspects in selection CO3–Interpret costing concepts with project execution
- CO4–Gain knowledge of costing techniques in service sector and various budgetary control techniques
- CO5 Become familiar with quantitative techniques in cost management

# **COMPOSITE MATERIALS**

q

9

9

9

9

TOTAL: 45 PERIODS

#### COURSE OBJECTIVES:

- Summarize the characteristics of composite materials and effect of reinforcement in composite materials.
- Identify the various reinforcements used in composite materials.
- Compare the manufacturing process of metal matrix composites.
- Understand the manufacturing processes of polymer matrix composites.
- Analyze the strength of composite materials.

# UNIT I INTRODUCTION

Definition – Classification and characteristics of Composite materials - Advantages and application of composites - Functional requirements of reinforcement and matrix - Effect of reinforcement (size, shape, distribution, volume fraction) on overall composite performance.

# UNIT II REINFORCEMENTS

Preparation-layup, curing, properties and applications of glass fibers, carbon fibers, Kevlar fibers and Boron fibers - Properties and applications of whiskers, particle reinforcements - Mechanical Behavior of composites: Rule of mixtures, Inverse rule of mixtures - Isostrain and Isostress conditions.

# UNIT III MANUFACTURING OF METAL MATRIX COMPOSITES

Casting – Solid State diffusion technique - Cladding – Hot isostatic pressing - Properties and applications. Manufacturing of Ceramic Matrix Composites: Liquid Metal Infiltration – Liquid phase sintering. Manufacturing of Carbon – Carbon composites: Knitting, Braiding, Weaving - Properties and applications.

# UNIT IV MANUFACTURING OF POLYMER MATRIX COMPOSITES

Preparation of Moulding compounds and prepregs – hand layup method – Autoclave method – Filament winding method – Compression moulding – Reaction injection moulding - Properties and applications.

# UNIT V STRENGTH

Laminar Failure Criteria-strength ratio, maximum stress criteria, maximum strain criteria, interacting failure criteria, hygrothermal failure. Laminate first play failure-insight strength; Laminate strength-ply discount truncated maximum strain criterion; strength design using caplet plots; stress concentrations.

# COURSE OUTCOMES:

- CO1 Know the characteristics of composite materials and effect of reinforcement in composite materials.
- CO2 Know the various reinforcements used in composite materials.
- CO3 Understand the manufacturing processes of metal matrix composites.
- CO4 Understand the manufacturing processes of polymer matrix composites.
- CO5 Analyze the strength of composite materials.

### WASTE TO ENERGY

#### LTPC 3003

#### **OBJECTIVES:**

- Interpret the various types of wastes from which energy can be generated
- Develop knowledge on biomass pyrolysis process and its applications
- Develop knowledge on various types of biomass gasifiers and their operations
- Invent knowledge on biomass combustors and its applications on generating energy
- Summarize the principles of bio-energy systems and their features

#### INTRODUCTION TO EXTRACTION OF ENERGY FROM WASTE UNIT I

Classification of waste as fuel - Agro based, Forest residue, Industrial waste - MSW - Conversion devices - Incinerators, gasifiers, digestors

#### UNIT II **BIOMASS PYROLYSIS**

Pyrolysis - Types, slow fast - Manufacture of charcoal - Methods - Yields and application -Manufacture of pyrolytic oils and gases, yields and applications.

#### UNIT III **BIOMASS GASIFICATION**

Gasifiers - Fixed bed system - Downdraft and updraft gasifiers - Fluidized bed gasifiers - Design, construction and operation - Gasifier burner arrangement for thermal heating - Gasifier engine arrangement and electrical power - Equilibrium and kinetic consideration in gasifier operation.

#### **UNIT IV BIOMASS COMBUSTION**

Biomass stoves – Improved chullahs, types, some exotic designs, Fixed bed combustors, Types, inclined grate combustors, Fluidized bed combustors, Design, construction and operation -Operation of all the above biomass combustors.

#### UNITV **BIO ENERGY**

Properties of biogas (Calorific value and composition), Biogas plant technology and status - Bio energy system - Design and constructional features - Biomass resources and their classification -Biomass conversion processes - Thermo chemical conversion - Direct combustion - biomass gasification - pyrolysis and liquefaction - biochemical conversion - anaerobic digestion - Types of biogas Plants - Applications - Alcohol production from biomass - Bio diesel production - Urban waste to energy conversion - Biomass energy programme in India.

### TOTAL: 45 PERIODS

# **COURSE OUTCOMES:**

- CO1 Understand the various types of wastes from which energy can be generated
- CO2 Gain knowledge on biomass pyrolysis process and its applications
- CO3 Develop knowledge on various types of biomass gasifiers and their operations Attested
- CO4 Gain knowledge on biomass combustors and its applications on generating energy
- CO5 Understand the principles of bio-energy systems and their features
