

**ANNA UNIVERSITY, CHENNAI**  
**UNIVERSITY DEPARTMENTS**  
**M.E. COMMUNICATION SYSTEMS**  
**REGULATIONS – 2023**  
**CHOICE BASED CREDIT SYSTEM**

**VISION**

To be recognized as a benchmark and trend setter in Electronics and Communication Engineering domain keeping in phase with rapidly changing technologies through effective partnership with reputed academic institutions, research organizations, industries and community.

**MISSION**

- Create highly motivated, technologically competent human resource by imparting high quality technical education through flexible student centric updated curricula suited to students with diverse backgrounds
- Adopt best teaching and learning practices and establish state-of-the-art facilities to provide quality academic ambience for innovativeness, research and developmental activities
- Enhance collaborative activities with academic institutions and industries for evolving indigenous technological solutions to meet societal needs and nurture leadership and entrepreneurship qualities with ethical means.
- Facilitate adequate exposure to the students, faculty and staff through training in the state-of-the-art technologies, efficient administration, global outreach and benchmarking against referential institutions

### 1. PROGRAMME EDUCATIONAL OBJECTIVES(PEOs):

- I. Graduates will evince comprehensive knowledge in concepts of communication theory, system design, networks and stride towards successful career
- II. Graduates will demonstrate technical proficiency in communication system design and remain committed for sustainable societal development
- III. Graduates will pursue learning and deliver innovative solutions through acquired complex problem solving skills

### 2. PROGRAMME OUTCOMES(POs):

PO#	PROGRAMME OUTCOMES
1	An ability to independently carry out research/investigation and development work to solve practical problems
2	An ability to write and present a substantial technical report/document
3	Students should be able to demonstrate a degree of mastery over Communication System design and analysis.
4	An ability to apply advanced concepts of communication Engineering and design with state of art tools
5	An ability to evolve customizable and implementable Communication and Networks systems
6	An ability to provide paradigm solution in the development of customized prototypes and networks in communication systems which have social and global relevance

### 3. PEO/PO Mapping:

**RM3151****RESEARCH METHODOLOGY AND IPR****L T P C  
2 1 0 3****UNIT I RESEARCH PROBLEM FORMULATION 9**

Objectives of research, types of research, research process, approaches to research; conducting literature review- information sources, information retrieval, tools for identifying literature, Indexing and abstracting services, Citation indexes, summarizing the review, critical review, identifying research gap, conceptualizing and hypothesizing the research gap

**UNIT II RESEARCH DESIGN AND DATA COLLECTION 9**

Statistical design of experiments- types and principles; data types & classification; data collection - methods and tools

**UNIT III DATA ANALYSIS, INTERPRETATION AND REPORTING 9**

Sampling, sampling error, measures of central tendency and variation,; test of hypothesis- concepts; data presentation- types of tables and illustrations; guidelines for writing the abstract, introduction, methodology, results and discussion, conclusion sections of a manuscript; guidelines for writing thesis, research proposal; References – Styles and methods, Citation and listing system of documents; plagiarism, ethical considerations in research

**UNIT IV INTELLECTUAL PROPERTY RIGHTS 9**

Concept of IPR, types of IPR – Patent, Designs, Trademarks and Trade secrets, Geographical indications, Copy rights, applicability of these IPR; , IPR & biodiversity; IPR development process, role of WIPO and WTO in IPR establishments, common rules of IPR practices, types and features of IPR agreement, functions of UNESCO in IPR maintenance.

**UNIT V PATENTS 9**

Patents – objectives and benefits of patent, concept, features of patent, inventive steps, specifications, types of patent application; patenting process - patent filling, examination of patent, grant of patent, revocation; equitable assignments; Licenses, licensing of patents; patent agents, registration of patent agents.

**TOTAL: 45 PERIODS****COURSE OUTCOMES**

Upon completion of the course, the student can

CO1: Describe different types of research; identify, review and define the research problem

CO2: Select suitable design of experiment s; describe types of data and the tools for collection of data

CO3: Explain the process of data analysis; interpret and present the result in suitable form

CO4: Explain about Intellectual property rights, types and procedures

CO5: Execute patent filing and licensing

5. Adaptive channel equalizer/ prediction filter / echo canceller (steepest descend/LMS / RLS)
6. BER estimation in AWGN and fading channels (ML and MAP detection)
7. MMSE Estimation (with / without knowledge on CSI)
8. Symbol, Carrier synchronization Techniques

**TOTAL: 60 PERIODS**

**COURSE OUTCOMES:**

**At the end of the course, students will be able to**

- CO1** Reinforcing of basics mathematical principles required for digital signal processing and system analysis
- CO2** Learning the techniques to estimate the spectrum of random signals in the presence of noise
- CO3** Exploring the techniques to equalizer for stationary signals and design lattice structure for the system
- CO4** Exploring the design techniques of adaptive systems for non-stationary signals
- CO5** Studying the techniques to recover the desired signal parameters to stabilize the receiver systems and techniques of information decoding from the signal corrupted by noisy channel

**CO-PO MAPPING:**

COs	PROGRAMME OUTCOMES					
	PO1	PO2	PO3	PO4	PO5	PO6
CO1	1		1	2		
CO2	1		1	2		
CO3	1		3	2	1	
CO4	1	3	3	2	1	
CO5	1	3	2	2	1	
Avg	1	3	2	2	1	

**UNIT I REVIEW OF DIGITAL MODULATION TECHNIQUES****6**

Linear and nonlinear modulation techniques, M-ary modulation techniques; Spectral characteristics of digital modulation signal, Spread spectrum modulation techniques.

**UNIT II RECEIVERS FOR AWGN AND FADING CHANNELS****6**

Optimum receivers for AWGN channel – Correlation demodulator, matched filter detector, maximum likelihood sequence detector ; Characterization of fading multipath channels, RAKE demodulator, Multiuser detection techniques.

**UNIT III ORTHOGONAL FREQUENCY DIVISION MULTIPLEXING****6**

OFDM- Signal Generation using IFFT; Guard Time and Cyclic Extension; Windowing; Peak to Average Power reduction schemes; Resource Grid Mapping Examples.

**UNIT IV ORTHOGONAL TIME FREQUENCY SPACE MODULATION****6**

OTFS Introduction, OTFS Signal Generation, Receivers for OTFS, Performance in AWGN and Time Varying Wireless Channels.

**UNIT V TURBO CODING AND LDPC****6**

Introduction to Turbo Coding, Iterative Turbo Decoding Principles; Modified MAP Algorithm-Soft-Output Viterbi Algorithm (SOVA); Turbo Coding for AWGN and Rayleigh Channels; LDPC Codes.

**THEORY : 30 PERIODS****LIST OF LABORATORY EXPERIMENTS :**

**(Using DSP / MATLAB / SIMULINK / System View / BWSIM / 5G Tool Kit or Equivalent )**

1. Simulation and analysis of digital modulation techniques
2. Implementation of digital modulation techniques on an SDR platform
3. CDMA signal generation and RAKE receiver implementation
4. OFDM transceiver Simulation and Analysis
5. OFDM transceiver implementation in SDR platform
6. OTFS Scheme Simulation and Analysis
7. Block and Convolutional Coding - Simulation and BER Analysis
8. Simulation and BER Analysis of Turbo coding and SOVA

**LABORATORY : 30 PERIODS****TOTAL : 60 PERIODS****COURSE OUTCOMES:**

**At the end of the course, the student will be able to:**

- CO1** Demonstrate an understanding of the trade-offs involved in the design of modulation signals
- CO2** Identify best receiver configuration based on the channel and signal characteristics

- CO3** Demonstrate an understanding and analyse the issues involved in the design of multi carrier modulation signals
- CO4** Demonstrate an understanding and analyse the mapping of time, frequency and space resources for realizing performance gains in frequency selective, time varying channels
- CO5** Implement coding and decoding using advances coding/decoding strategies and evaluate performance in AWGN and fading channel conditions

**CU3103**

**ADVANCED WIRELESS COMMUNICATION**

**L T P C  
2 0 2 3**

**UNIT I WIRELESS CHANNEL PROPAGATION AND MODEL 6**

Propagation of EM signals in wireless channel–Reflection, diffraction and Scattering- free space, two ray. Small scale fading- channel classification- channel models — COST -231 Hata model, Longley-Rice Model, NLOS Multipath Fading Models: Rayleigh, Rician, Nakagami, Composite Fading–shadowing Distributions, Link power budget Analysis.

**UNIT II CAPACITY OF WIRELESS CHANNELS 6**

Capacity in AWGN, capacity of flat fading channel, capacity of frequency selective fading channels.

**UNIT III DIVERSITY 6**

Realization of independent fading paths, Receiver Diversity: Selection combining, Threshold

**CO-PO MAPPING:**

COs	PROGRAMME OUTCOMES

**CU3104****ADVANCED RADIATION SYSTEMS****L T P C****3 0 0 3****UNIT I RADIATION FUNDAMENTALS AND WIRE ANTENNAS 9**

Review of electromagnetics – Types of Antennas- Fundamental parameters of antennas - Linear wire antennas - Infinitesimal dipole, Finite length dipole - radiated fields-power density and radiation resistance - Field regions.

**UNIT II ANTENNA ARRAYS 9**

Linear array –uniform array-Two element and N element array-Broadside and Endfire – Binomial Chebyshev, Taylor series - Planar arrays– Design considerations - Mutual coupling –Feed networks.

**UNIT III APERTURE ANTENNAS 9**

Field equivalence principle, Babinet's principle; Horn antenna; Reflector antenna, design consideration, and Excitation techniques, Microstrip Antennas-Design and analysis-simulation using EM software.

**UNIT IV BROADBAND ANTENNAS 9**

Rumsey's principle, Helical Antenna, Normal mode and axial mode –sleeve antenna--Yagi Uda array of linear elements – Biconical-Spiral antennas-Log periodic dipole array- Design considerations-simulation using EM software

**UNIT V MODERN ANTENNAS AND ANTENNA MEASUREMENTS 9**

Higher generation antennas-Antennas for near field communication-wearable antennas Micromachining; Measurements: Vector Network Analyzer, Measurement ranges, Gain measurement, Radiation pattern measurement- Polarization measurement

**TOTAL: 45 PERIODS****COURSE OUTCOMES:****At the end of the course, the student should be able to:**

- CO1** Explain the various antenna parameters
- CO2** Analyze and design simple antennas to complex antennas
- CO3** Demonstrate the understanding of antenna radiation mechanism

- CO4** Identify and classify antennas based on their applications
- CO5** Exhibit an understanding of antenna fabrication and measurements

**CU3105          ANALOG AND DIGITAL ELECTRONIC SYSTEM DESIGN          L T P C**  
**3 0 2 4**

**UNIT I          MOS TRANSISTOR PRINCIPLES AND LOGIC GATES          9**  
MOS(FET) Transistor Characteristic under Static and Dynamic Conditions, MOS Transistor Secondary Effects, CMOS Inverter-Static Characteristic, Dynamic Characteristic, Power, Energy, and Energy Delay parameters, CMOS Logic gates design.

**UNIT II          SINGLE STAGE AMPLIFIERS          9**  
MOS device models and equivalent circuits, CS, CG and CD amplifiers - Analysis of gain, impedances and noise, Amplifiers designed with cascode transistor, Current mirror.

**UNIT III          DIFFERENTIAL AMPLIFIERS          9**  
Design of differential amplifiers – Analysis of gain, common mode range, bandwidth, slew rate and power dissipation, voltage swing, frequency response and stability. Structures of high gain amplifier and principles of operational amplifier design.

**UNIT IV          DIGITAL CIRCUIT DESIGN          9**  
FPGA Architecture, data path circuit design, Analysis of clocked synchronous sequential circuits and modelling- Design of synchronous sequential circuits design of iterative circuits-ASM chart and realization using ASM

**UNIT V SYSTEM DESIGN USING HDL****9**

Logic System, Data Types and Operators for Modelling in HDL - Behavioral Descriptions in HDL – HDL Based Synthesis – Synthesis of Finite State Machines – structural modelling – Realization of combinational and sequential circuits using HDL

**LIST OF EXPERIMENTS:****30 PERIODS****Simulations using Cadence Spretre/Mentor Graphics/SPICE/Equivalent tools**

1. DC Characteristics of NMOS and PMOS Devices
2. Logic gates design and simulation (NOT, NAND, NOR, AND, OR)
3. CS amplifiers design and performance analysis ( $Z_{IN}$ ,  $Z_{OUT}$ , Gain, bandwidth, transient)
4. Design a differential amplifier with resistive load (low-frequency voltage gain, unity gain bandwidth, Power dissipation, CMRR, Transient analysis)

**FPGA based Experiments**

5. Implementation of combinational circuits
6. Implementation of simple state machine and timing analysis
7. FPGA realization and real time output analysis

**TOTAL: 75 PERIODS****COURSE OUTCOMES:**

- CO1:** Ability to realize the impact of MOS devices and their impact in logic gate designs  
**CO2:** Ability to design and analyze the performance of amplifiers  
**CO3:** Ability to design and analyze differential amplifiers and op amps  
**CO4:** Ability to analyze and design synchronous sequential circuits  
**CO5:** Ability to design and use programming tools for implementing digital circuits

<b>CO4</b>	1	2	1	1	1	
<b>CO5</b>	1	2	1	1	1	1

**COURSE OUTCOMES:**

- CO1** The students would be able to develop independent and collaborative learning ability
- CO2** The students would be able to distinguish and integrate different forms of academic knowledge
- CO3** The students would be capable of applying the principles of ethics and respect in interaction with others
- CO4** The students would be able to apply multidisciplinary strategy to address current, real-world issues.

**CU3201 WIRELESS COMMUNICATION TECHNIQUES FOR 5G AND BEYOND**

L T P C

2 0 2 3

**UNIT I INTRODUCTION TO 5G AND BEYOND**

6

5G characteristics and requirements, Applications, Case studies, 5G channel models: METIS channel models, Map-based model, stochastic model, Comparison of Models

**UNIT II 5G ARCHITECTURE**

6

Introduction, NFV and SDN, Basics about RAN architecture, High –level requirements for the 5G architecture, Functional architecture and 5G flexibility, Functional split criteria, Functional Split Alternatives, Functional optimization for specific applications, Integration of LTE and new air interface to fulfill 5G requirements, Enhanced Multi-RAT Coordination features, Physical architecture and 5G deployment.

**UNIT III MULTI-CARRIER WAVEFORMS FOR 5G**

6

Filter-bank based multi-carrier (FBMC)- Principles, Transceiver block diagram, Frame structure, Resource structure, allocation, mapping. Universal filtered multi carrier (UFMC)- Principles, Transceiver structure, Frame and Resource structure, allocation, mapping. Generalized frequency division multicarrier (GFDM) —Principles, Transceiver Block diagram, Frame structure, Resource structure, allocation, mapping, MIMO-GFDM

**UNIT IV MULTIPLE ACCESS TECHNIQUES IN 5G**

6

Challenges in OFDM- NOMA — Principle- Superposition Coding, Successive Interference Cancellation, Power Domain NOMA, Sparse Code NOMA - types, Power Domain Sparse

Code NOMA, Cooperative NOMA – Benefits and Challenges.

**UNITV COOPERATIVECOMMUNICATION 6**

Machine Type Communication (MTC), Device to Device Communication (D2D), 5G Narrowband IoT, Cloud Computing architecture and Protocols, **Relaying:** Cooperative NOMA- Benefits and Challenges, Half duplex relaying, Full duplex relaying, Amplify and forward relaying, Decode and forward relaying, Decode and forward relaying with PLNC, BER Analysis, Capacity Analysis.

**TOTAL:30 PERIODS**

**LIST OF EXPERIMENTS:**

1. Design and Implementation of FBMC using MATLAB
2. Design and Implementation of GFDM using MATLAB
3. Design and Implementation of UFMC using MATLAB
4. Implementation of NOMA transceiver system
5. Cooperative relaying in NOMA and comparison of amplify and forward, Decode and forward systems
6. Project on Massive MIMO System Implementation with Perfect CSI
7. Cellular Network modeling of 5G systems

**LABORATORY :30 PERIODS**

**TOTAL:60PERIODS**

**COURSEOUTCOMES:**

**At the end of the course, the student should be able to:**

- CO1:** Able to analyze the performance of different channel models adopted in 5G wireless systems
- CO2:** Able to design a transceiver for Multicarrier waveforms.
- CO3:** Able to analyze multiple access techniques in 5G networks
- CO4:** Able to design a pilot, estimate channels and analyze capacity for single cell and multi cell Massive MIMO.
- CO5:** Able to analyze different types of cooperative communications.

**COURSE OUTCOMES:**

**At the end of the course,**

- CO1** Students will be able understand the specifications of transceiver modules
- CO2** Students will understand pros and cons of transceiver architectures and their associated design considerations
- CO3** Students will understand the impact of noise and amplifier non-linearity of amplification modules and also will learn the resultant effect during cascade connections
- CO4** Students will be get exposure to learn about spurs and generation principles during signal generation and frequency translations
- CO5** The case study will reinforce the understanding of transceiver systems and aid to select specification parameters selections

**CU3203**

**MICROWAVE INTEGRATED CIRCUITS**

**L T P C**  
**2 0 2 3**

**UNIT I**

**PLANAR TRANSMISSION LINES AND COMPONENTS**

**6**

Review of Transmission line theory– Types of transmission lines: Strip line, Slot line, Microstrip lines – Coupled lines: Even mode and odd mode analysis – Filters – Couplers – Power dividers.

**UNIT II**

**IMPEDANCE MATCHING NETWORKS**

**6**

Circuit Representation of two port RF/Microwave Networks: High Frequency Parameters, Transmission Matrix, ZY Smith Chart, Design of Matching Circuits using Lumped Elements, Matching Network Design using Distributed Elements.

3. Link Budget and Rise Time Analysis of Optical Link.
4. Study and perform time division multiplexing (digital).
5. Characterization of Fiber Bragg Grating Filter (Reflectivity, Insertion loss & Crosstalk) and measure isolation and insertion loss of a three port Circulators/Isolator.
6. Signal transmission and reception using WDM and spectral characterization.
7. Analysis of optical switching technologies using Optical Simulation tool.
8. Implementation of a simple All Optical Network.
9. Implementation of a Free Space Optics Link.
10. Photonic IC design- Components

**LABORATORY: 30 PERIODS**

**TOTAL: 60 PERIODS**

**COURSE OUTCOMES:**

**At the end of the course,**

- CO1** Students have a good knowledge on operation of couplers, isolators, circulators, multiplexers and filters and optical amplifiers.
- CO2** Students will be able to design Photonic IC's.
- CO3** Students will have a good knowledge of SONET/SDH.
- CO4** Students will be able to resolve link issues and have good knowledge of fault restoring techniques.
- CO5** Students will have a good knowledge of the various access networks.

**UNIT I           BASICS OF PCB DESIGN, TOOLS & INDUSTRY STANDARDS           3+12**

PCB fabrication process photolithography and chemical etching, Mechanical Layer registration. Function of the Layout in the PCB Design Process. Classes and Types of PCBs, Introduction to Standard Fabrication Allowances, PCB Dimensions and Tolerances, Copper Trace and Etching Tolerances, Standard Hole Dimensions, Solder mask Tolerance.

1. PCB design using traditional method.
2. PCB design using LASER technology.
3. PCB component Assembly and Testing.

**UNIT II           PCB DESIGN FLOW USING CAD TOOL           3+12**

Electronic Design Automation Tools (EDA) - Schematic capture - Component Selection - Annotation - Foot print assignment - Wiring - Design Rule Check - Netlist generation -Convert to PCB - Component Placement - Manual Routing - Auto Routing - Gerber file generation.

4. To fabricate PCB using additive technology and testing of electronics circuit on PCB.
5. To perform Assembly Processes -Manual assembly processes.
6. To perform automated assembly processes (pick and place).

**UNIT III           RF PCB DESIGN           3+12**

Radiation from surface current and line current distribution, Basic Antenna parameters, Feeding structure-Patch Antenna, Micro strip arrays, Antenna System for Mobile Radio-Antenna Measurements and Instrumentation.

7. Design and Fabrication of single ISM band microstrip antenna
8. Design and Fabrication of dual band microstrip antenna
9. Design and Fabrication of UWB antenna

**UNIT IV           EMI/EMC CONCEPTS           3+12**

EMI/EMC Concepts, EMI-EMC definitions and Units of parameters, Sources and victim of EMI Conducted and Radiated EMI Emission, Susceptibility, Transient EMI, ESD, Radiation Hazards.

10. Design of microstrip patch antenna for 4G/5G applications
11. Fabrication of microstrip patch antenna using LPKF Promat
12. SMA Connector Identification for microstrip antenna and its soldering.
13. Antenna measurement and validation using EMI/EMC facility

**UNITV           EMI/EMC TESTING           3+12**

EMI Coupling Principles - Conducted, radiated and transient coupling; Common ground impedance coupling; Common mode and ground loop coupling; Differential mode coupling; Near field cable to cable coupling, cross talk; Field to cable coupling; Power mains and Power supply

coupling. Simulation of Electromagnetic interference.

14. Design of RF transmitter and receiver module using EDA tool
15. Fabricate a PCB Layout for transmitter and receiver using LDK Promat
16. Populate components in an automated assembly processes
17. EMI/EMC Pre-compliance testing of transmitter and receiver module

**TOTAL : 75 PERIODS**

**COURSE OUTCOMES:**

**At the end of the course the student would be**

- CO1** Ability to use EDA tools and PCB terminologies
- CO2** Ability to fabricate a PCB from board diagram and skilfully perform assembling and soldering of components
- CO3** Ability to design microstrip antenna and make appropriate trade-offs to achieve the most cost effective design that meets all requirements.
- CO4** Familiar with the concepts related to Electromagnetic interference and Compatibility issues in PCBs
- CO5** Familiar with the principles of EMI coupling and control techniques and able to propose solutions for minimizing EMI in PCBs

**UNIT I SIMULATION METHODOLOGY 8**

Introduction, Aspects of methodology, Performance Estimation, Simulation sampling frequency, Low pass equivalent simulation models for bandpass signals, Multicarrier signals, Non-linear and time-varying systems, Post processing – Basic graphical techniques and estimations.

**UNIT II RANDOM SIGNAL GENERATION & VALIDATION 8**

Uniform random number generation, Mapping uniform random variables to an arbitrary pdf, Correlated and Uncorrelated Gaussian random number generation, PN sequence generation, Random signal processing, Testing of random number generators.

**UNIT III MONTE CARLO SIMULATION 9**

Fundamental concepts, Application to communication systems, Monte Carlo integration, Semi analytic techniques, Case study: Performance estimation of a wireless system.

**UNIT IV ADVANCED MODELS & SIMULATION TECHNIQUES 10**

Modeling and simulation of non-linearities: Types, Memory less non-linearities, Non-linearities with memory, Modeling and simulation of Time varying systems: Random process models, Tapped delay line model, Modeling and simulation of waveform channels, Discrete memory less channel models, Markov model for discrete channels with memory.

**UNIT V CASE STUDY: PERFORMANCE EVALUATION OF WIRELESS COMMUNICATION SYSTEMS 10**

Case study: Simulation of a wireless communication System: AWGN Channel, Fading channel - analytic and semi analytic approaches

**TOTAL : 45 PERIODS**

**COURSE OUTCOMES:**

**At the end of the course the student would be able to**

- CO1:** Understand the different signal generation and processing methods
- CO2:** Mathematically model a physical phenomena
- CO3:** Simulate a phenomena so as to depict the characteristics that may be observed in a real experiment.
- CO4:** Apply knowledge of the different simulation techniques for designing a communication system or channel
- CO5:** Ability to validate a simulated system performance so as to match a realistic scenario.

**CU3002**

**RADAR SIGNAL PROCESSING**

**L T P C  
3 0 0 3**

**UNIT I RANGE EQUATION AND TYPES OF RADAR 9**

Basic Radar, Radar equation, Radar parameters, Block diagram, Radar frequencies. Types of Radar: CW, Doppler, MTI, FMCW, Pulsed, Tracking Radar. DSP in Radar (MTD1), Radar measurements.

**UNIT II RADAR SYSTEM CONCEPTS 9**

Scattering and RCS, RCS models, propagation, antennas, receivers, Different type of Noise, Noise figure, False alarm & Missed detection, Radar cross section, Transmit/Receive and AntiTransmit/Receive Switches

**UNIT III SIGNAL PROCESSING – I 9**

Radar Signal Processing Fundamentals –Detection and likelihood ratio, binary detection, matched filtering, radar ambiguity functions, pulse compression and radar waveforms, radar resolution, Detection of radar signals in Noise and clutter, detection of non-fluctuating target in noise, Matched filter response to delayed Doppler shifted signals,

**UNIT IV SIGNAL PROCESSING – II 9**

Doppler Processing, Linear FM Pulse Compression, Waveform diversity, Passive System: Digital compression, SAW pulse compression. Signal processing in Antenna arrays.

**UNIT V APPLICATIONS OF RADAR SIGNAL PROCESSING 9**

Pulse-Doppler radar, CFAR detection, synthetic aperture radar (SAR), inverse synthetic aperture radar (ISAR), moving target indication (MTI), displaced-phase-center-antenna technique (DPCA), adaptive radar, super resolution (MUSIC), space-time adaptive processing (STAP).

**TOTAL: 45 PERIODS**

## COURSE OUTCOMES:

At the end of the course the student would be

**CO1:** Able to demonstrate an understanding of the basic principles of radar operation and the types

**CO2:** Able to appreciate the impact of the different performance measures in a radar system.

**CO3:** Able to identify and apply different signal processing tools in the design of radar systems

**CO4:** Able to design radar systems to meet user specified operational goals.

**CO5:** Able to model radar returns in various operational environments and analyze performance.

**MASSIVE MIMO AND mm WAVE SYSTEMS**

**L T P C**  
**3 0 0 3**

### UNIT I INTRODUCTION

**9**

Massive MIMO: characteristics, principles, applications and implementation challenges, Transmission/detection techniques; Channel hardening in large dimensions,- Channel Models – Effect of spatial correlation – Channel Estimation – Pilot contamination.

### UNIT II PRECODING IN LARGE MIMO SYSTEMS

**9**

SVD precoding, Precoding in a multiuser MIMO downlink – Linear precoding & Non-linear

precoding, Precoding in large multiuser MISO systems, Precoder based on norm descent search (NDS), Multicell precoding.

**UNIT III mmWAVE CHANNEL CHARACTERISTICS 9**

Millimeter wave characteristics, applications and challenges, Radio wave propagation for mm wave: Large scale propagation channel effects, small scale channel effects, channel estimation: OMP and SOMP, mmwave link budget.

**UNIT IV mmWAVE ARCHITECTURE 9**

Millimeter wave design considerations, Partially connected and Fully-connected mmwave architectures, Transceiver architecture, Transceiver without mixer, Receiver without Oscillator, millimeter wave calibration, production and manufacture.

**UNIT V mmWAVE MIMO SYSTEMS 9**

Massive MIMO Communications, Spatial diversity of Antenna Arrays, Multiple Antennas, Multiple Transceivers, Noise coupling in MIMO system, Spatial, Temporal and Frequency diversity, Dynamic spatial, frequency and modulation allocation, Beamforming for MmWave communications: Analog, digital and hybrid Beamforming.

**TOTAL: 45 PERIODS**

**COURSE OUTCOMES:**

- CO1:** Ability to understand Massive MIMO characteristics and implementation challenges
- CO2:** Ability to design precoding techniques for massive MIMO system and analyze their impacts
- CO3:** Ability to characterize propagation issues at Millimeter wave frequencies and analyze mmWave link budget
- CO4:** Ability to design mmWave transceivers
- CO5:** Ability to design mmWave beamforming techniques

**3 0 0 3**

**UNIT I                      MACHINE LEARNING BASICS                      9**

Supervised and Unsupervised learning, Capacity, Over fitting and Under fitting, Cross Validation, Linear regression, Logistic Regression, Regularization, Naive Bayes, Principle Component Analysis, Support Vector Machines (SVM), Decision tree, Random forest, K-Means Clustering, k nearest neighbor.

**UNIT II                      NEURAL NETWORKS                      9**

Feed forward Networks, Back propagation, Convolutional Neural Networks-LeNet, AlexNet, ZFNet, VGGNet, GoogLeNet, ResNet, Visualizing Convolutional Neural Networks, Guided Back propagation, Recurrent Neural Network (RNN).

**UNIT III                      DISTRIBUTED ML AND REINFORCEMENT LEARNING                      9**

Distributed optimization in resource-constrained systems, Communication-Efficient Distributed Edge Learning, Federated learning, Decentralized learning, Low-latency and on-device AI; Reinforcement Learning-Markov decision processes, Q-learning and Policy Optimization methods, Deep Reinforcement Learning (DRL), Multi-agent systems.

**UNIT IV                      ML IN WIRELESS PHYSICAL LAYER SYSTEM DESIGN                      9**

Machine Learning in Channel Estimation, Feedback, and Signal Detection-Compressive sensing and pilot Estimation. Physical layer communications-Use of auto encoders for data transmission, Modulation, Channel coding, Modulation / Signal and Constellation classification, Localization, Spectrum Sensing using Deep Learning.

**UNIT V                      ML IN WIRELESS SYSTEMS AND SECURITY                      9**

LOS and NLOS channel classification, Water-filling power allocation for 5G systems, Optimization for OFDM and MIMO-OFDM systems. Optimization in beamformer design – Robust receive beamforming, Transmit downlink beamforming. IoT Application: MCU-Net, Radar for target detection, Array Processing, MUSIC, ML in Side channel analysis.

**TOTAL : 45 PERIODS**

**COURSE OUTCOMES:**

**At the end of the course the student would be**

- CO1:** Familiar with the different machine learning techniques and their use cases.
- CO2:** In a position to formulate Neural Network based problems corresponding to different applications.
- CO3:** In a position to formulate reinforcement learning concepts based problems corresponding to wireless applications.

- CO4:** Able to evaluate machine learning techniques that are useful to solve wireless physical layer problems.
- CO5:** In a position to read current research papers, understand the issues and implement the machine learning based real time solution approaches.

<b>Avg.</b>	<b>3</b>		<b>2</b>	<b>3</b>	<b>1</b>	

**UNIT I SOFTWARE DEFINED RADIO AND ITS ARCHITECTURE 9**

Definitions and potential benefits, software radio architecture evolution, technology tradeoffs and architecture implications. Essential functions of the software radio, SDR, hardware architecture, software architecture, top level component interfaces, interface topologies among plug and play modules.

**UNIT II COGNITIVE RADIOS AND ITS ARCHITECTURE 9**

Marking radio self-aware, cognitive techniques – position awareness, environment awareness in cognitive radios, optimization of radio resources, Cognitive Radio – functions, components and design rules, Cognition cycle – orient, plan, decide and act phases, Inference Hierarchy, Architecture maps, Building the Cognitive Radio Architecture on Software defined Radio Architecture

**UNIT III SPECTRUM SENSING AND IDENTIFICATION 9**

Primary Signal Detection: Energy Detector, Cyclostationary Feature Detector, Matched Filter, Cooperative Sensing , Definition and Implications of Spectrum Opportunity, Spectrum Opportunity Detection , Fundamental Trade-offs: Sensing Accuracy versus Sensing Overhead.

**UNIT IV INFORMATION THEORETICAL LIMITS ON CR NETWORKS 9**

Types of Cognitive Behavior, Interference-Avoiding Behavior: Spectrum Interweave, Interference-Controlled Behavior: Spectrum Underlay, Underlay in Small Networks: Achievable Rates, Underlay in Large Networks: Scaling Laws, Interference-Mitigating Behavior: Spectrum Overlay, Opportunistic Interference Cancellation.

**UNIT V USER COOPERATIVE COMMUNICATIONS 9**

User Cooperation and Cognitive Systems, Relay Channels: General Three-Node Relay Channel, Wireless Relay Channel, User Cooperation in Wireless Networks: Two-User Cooperative Network, Cooperative Wireless Network ,Multihop Relay Channel

**TOTAL :45 PERIODS****COURSE OUTCOMES:**

**CO1:** Ability to understand the basics of SDR and cognitive radio

**CO2:** Ability understand the architecture of cognitive radio and SDR

**CO3:** Ability to identify the role of spectrum sensing and dynamic spectrum access

**CO4:** Ability to apply the concept of cognitive radio in different applications like IOT

**CO5:** Ability to design the MAC and network layers for cognitive radio

**UNIT V            SATELLITENAVIGATIONAND GLOBALPOSITIONINGSYSTEM****9**

Radio and Satellite Navigation, GPS Position Location Principles of GPS Receivers and Codes, Satellite Signal Acquisition, GPS Receiver Operation and Differential GPS, INS, Indian Remote Sensing and ISRO GPS Systems.

**TOTAL:45 PERIODS****COURSEOUTCOMES:****At the end of the course the student would be**

**CO1:**Able to demonstrate an understanding of the basic principles of satellite based communication the essential elements involved and the transmission methodologies.

**CO2:**Familiar with satellite orbits, placement and control, satellite link design and the communication system components.

**CO3:**Able to demonstrate an understanding of the different interferences and attenuation mechanisms affecting the satellite link design.

**CO4:**The student would be able to demonstrate an understanding of the different communication, sensing and navigational applications of satellite.

**CO5:** Familiar with the implementation aspects of existing satellite based systems.

**AP3057****SIGNAL INTEGRITY FOR HIGH SPEED DESIGN****L T P C****3 0 0 3****UNIT I            SIGNAL PROPAGATION ONTRANSMISSIONLINES****9**

Transmission line equations, wave solution, wave vs. circuits, initial wave, delay time, Characteristic impedance , wave propagation, reflection, and bounce diagrams Reactive

terminations – L, C, static field maps of micro strip and strip line cross-sections, per unit length parameters, PCB layer stackups and layer/Cu thicknesses, cross-sectional analysis tools,  $Z_0$  and Td equations for microstrip and stripline Reflection and terminations for logic gates, fan-out, logic switching, input impedance into a transmission-line section, reflection coefficient, skin-effect, dispersion.

**UNIT II MULTI-CONDUCTOR TRANSMISSION LINES AND CROSS-TALK 9**

Multi-conductor transmission-lines, coupling physics, per unit length parameters, Near and far-end cross-talk, minimizing cross-talk (stripline and microstrip) Differential signaling, termination, balanced circuits, S-parameters, Lossy and Lossless models.

**UNIT III NON-IDEAL EFFECTS 9**

Non-ideal signal return paths – gaps, BGA fields, via transitions, Parasitic inductance and capacitance, Transmission line losses –  $R_s$ ,  $\tan\delta$ , routing parasitic, Common-mode current, differential-mode current, Connectors.

**UNIT IV POWER CONSIDERATIONS AND SYSTEM DESIGN 9**

SSN/SSO, DC power bus design, layer stack up, SMT decoupling, Logic families, power consumption and system power delivery, Logic families and speed Package types and parasitic, SPICE, IBIS models, Bit streams, PRBS and filtering functions of link-path components, Eye diagrams, jitter, inter-symbol interference Bit-error rate, Timing analysis.

**UNIT V CLOCK DISTRIBUTION AND CLOCK OSCILLATORS 9**

Timing margin, Clock slew, low impedance drivers, terminations, Delay Adjustments, canceling parasitic capacitance, Clock jitter.

**TOTAL : 45 PERIODS**

**COURSE OUTCOMES:**

**CO1:** Ability to identify sources affecting the speed of digital circuits.

**CO2:** Ability to identify methods to improve the signal transmission characteristics

**CO3:** Ability to analyze non-ideal effects

**CO4:** Ability to analyze system power dissipation

**CO5:** Ability to analyze clocking strategies.

**CU3010 ELECTROMAGNETIC INTERFERENCE AND COMPATIBILITY IN SYSTEM DESIGN**

L T P C

3 0 0 3

**UNIT I EMI/EMC CONCEPTS 9**

EMI-EMC definitions and Units of parameters; Sources and victim of EMI; Conducted and Radiated EMI Emission and Susceptibility; Transient EMI, ESD; Radiation Hazards.

**UNIT II EMI COUPLING PRINCIPLES 9**

Conducted, radiated and transient coupling; Common ground impedance coupling ; Common mode and ground loop coupling ; Differential mode coupling ; Near field cable to cable coupling, cross talk ; Field to cable coupling ; Power mains and Power supply coupling.

**UNIT III EMI CONTROL TECHNIQUES 9**

Shielding, Filtering, Grounding, Bonding, Isolation transformer, Transient suppressors, Cable routing, Signal control.

**UNIT IV EMC DESIGN OF PCBS 9**

Component selection and mounting; PCB trace impedance; Routing; Cross talk control; Power distribution decoupling; Zoning; Grounding; VIAs connection; Terminations.

**UNIT V EMI MEASUREMENTS AND STANDARDS 9**

Open area test site; TEM cell; EMI test shielded chamber and shielded ferrite lined anechoic chamber; Tx /Rx Antennas, Sensors, Injectors / Couplers, and coupling factors; EMI Rx and spectrum analyzer; Civilian standards-CISPR, FCC, IEC, EN; Military standards-MIL461E/462.

**TOTAL: 45 PERIODS****COURSE OUTCOMES:****At the end of the course the student would be**

**CO1:** Familiar with the concepts related to Electromagnetic interference and Compatibility issues in PCBs

**CO2:** Familiar with the principles of EMI coupling and control techniques

**CO3:** Able to analyze Electromagnetic interference effects in the design of PCBs

**CO4:** Able to propose solutions for minimizing EMI in PCBs

**CO5:** Able to analyze Electromagnetic environment and carryout measurements as per standards

**CU3011**

**MICRO ELECTRO MECHANICAL SYSTEMS**

**L T P C**

**3 0 0 3**

**UNIT I INTRODUCTION TO MEMS AND NEMS**

**9**

MEMS and Microsystems, Miniaturization, Typical products, Micro sensors, Micro actuation, MEMS with micro actuators, Micro accelerometers and Micro fluidics, Introduction to NEMS, Nano scaling, classification of nano-structured materials, Applications of nano-materials. Synthesis routes – Bottom up and Top down approaches.

Materials for MEMS: Silicon, silicon compounds, polymers, metals.

**UNIT II MECHANICS FOR MEMS DESIGN**

**9**

Elasticity, Stress, strain and material properties, Bending of thin plates, Spring configurations, torsional deflection, Mechanical vibration, Resonance, Thermo mechanics – actuators, force and response time, Fracture and thin film mechanics.

**UNIT III MATERIALS AND FABRICATION OF MEMS**

**9**

Atomic Structures and Quantum Mechanics, Molecular and Nanostructure Dynamics Photolithography, Ion Implantation, Diffusion, Oxidation, Dry and wet etching, Bulk Micromachining, Surface Micromachining, LIGA.

**UNIT IV DESIGN OF MEMS SENSORS AND ACTUATORS 9**

Acoustic sensor – Quartz crystal microbalance, Surface acoustic wave, Flexural plate wave, shear horizontal; Vibratory gyroscope, Pressure sensors, Electrostatic actuators, piezoelectric actuators, Thermal actuators, Actuators using shape memory alloys, Micro grippers, Micro motors, Micro valves, Micro pumps, Packaging.

**UNIT V INTRODUCTION TO OPTICAL AND RF MEMS 9**

Optical MEMS, - System design basics — Gaussian optics, matrix operations, resolution. Casestudies, MEMS scanners and retinal scanning display, Digital Micro mirror devices. RF MEMS–design, RF MEMS switch, performance issues. Packaging.

**TOTAL: 45 PERIODS**

**COURSE OUTCOME:**

**CO1:** Recognize the basics of materials and fabrication of micro electromechanical systems.

**CO2:** Devise the fabrication techniques of nano-electromechanical systems

**CO3:** Analyze the key performance aspects of micro electromechanical sensors and transducers.

**CO4:** Analyze various aspects of nano-materials and sensors.

**CO5:** Identify the potential applications of MEMS in the RF and optical domain

**CU3012 HIGH SPEED SWITCHING AND NETWORKING L T P C 3 0 0 3**

**UNIT I LAN SWITCHING TECHNOLOGY 9**

Switching Concepts, LAN Switching, switch forwarding techniques - cut through and store and

forward, Layer switching, Loop Resolution, Switch Flow control, virtual LANs.

**UNITII QUEUES IN HIGHSPEED SWITCHES 9**

Internal Queuing -Input, output and shared queuing, multiple queuing networks – combined Input, output and shared queueing-performance analysis of Queued switches.

**UNITIII PACKETS SWITCHING ARCHITECTURES 9**

Architectures of Internet Switches and Routers- Bufferless and buffered Crossbar switches, Multi-stager switching, Optical Packet switching; Switching fabric on a chip; Internally buffered Crossbars

**UNITIV OPTICAL SWITCHING ARCHITECTURES 9**

Need for Multilayered Architecture-, Layers and Sub-layers, Spectrum partitioning, Optical Network Nodes, Network Access Stations, Overlay Processor, Logical network overlays, Connection Management and Control

**UNITV IP SWITCHING 9**

Addressing model, IP Switching types - flow driven and topology driven solutions, IP over ATM address and next hop resolution, multicasting, IPv6 over ATM.

**TOTAL: 45 PERIODS**

**COURSE OUTCOMES:**

**At the end of the course, the student should be able to:**

- CO1:** Familiar with the basics of switching technologies and its implementation in LANs, ATM, IP and Optical networks
- CO2:** Familiar with the different switching architectures and queuing strategies
- CO3:** Able to analyze switching networks based on their blocking performances and implementation complexities.
- CO4:** Able to identify suitable switch architectures for a specified networking scenario.
- CO5:** In a position to apply his knowledge of switching technologies, architectures and buffering strategies for designing high speed communication networks and analyse their performance.

**CONVEX OPTIMIZATION**

**L T P C  
3 0 0 3**

**UNITI INTRODUCTION TO OPTIMIZATION 8**

Introduction to properties of Vectors, Norms, Positive Semi-Definite matrices, Gaussian Random Vectors. Extrema of functions — local and global. Optimization problem — categories, objective unction, constraints, feasible region. Introduction to Convex Optimization— Convex sets, Hyper planes/ Half-spaces, Convex/ Concave Functions.

**UNITII CONVEX PROGRAMMING 8**

Uniform random, Geometric programming(GP). Linear programming (LP). Quadratic programming(QP) Quadratically constraint QP(QCQP). Second order cone programming(SOCP). Semi-definite programming(SDP).

**UNITIII DUALITY 9**

Fundamental concepts, Lagrange dual function and conjugate function. Lagrange dual problem. Strongduality. Karush-Kuhn-Trcker(KKT) conditions. Lagrange dual optimization. Duality of problems with generalized inequalities.

**UNITIV MULTI ANTENNATECHNIQUIES 10**

Water-filling power allocation, Optimization for MIMO Systems, OFDM Systems and MIMO-OFDM

systems. Optimization in beam former design - Robust receive beam forming, Transmit downlink beam forming. Application: Radar for target detection, Array Processing, MUSIC, MIMO-Radar Schemes for Enhanced Target Detection.

**UNITV COOPERATIVE COMMUNICATIONS 10**

Optimal Power Allocation for cooperative Communication. Cooperative communications in OFDM and MIMO cellular relay – System mode –Radio resource allocation (RRA) in OFDMA relay systems, Dynamic RRA in OFDMA, RRA in MIMO multi-hop networks. Power allocation in Multi-cell cooperative OFDM systems. Radio resource optimization in cooperative cellular wireless networks – Network with single source – destination pair, multiuser cooperation, Relay selection.

**TOTAL:45 PERIODS**

**COURSEOUTCOMES:**

**At the end of the course the student would be**

- CO1:** Familiar with the basic mathematics associated with Optimization
- CO2:** Able to understand the Convex programming approaches and the application of duality conditions
- CO3:** Familiar with the application methodology for real time communication applications
- CO4:** Able to mathematically model optimization problems and propose solution approaches
- CO5:** In a position to apply his knowledge of the different convex optimization techniques to solve different problems in communication system.

**UNIT I STATISTICAL DECISION THEORY 9**

Review of Gaussian variables and processes; problem formulation and objective of signal detection and signal parameter estimation in discrete-time domain, Hypothesis testing- Bayes' detection, Maximum A Posteriori detection, Maximum likelihood criterion, Minimum probability of error criterion, Min-Max criterion, Neyman-Pearson criterion- Multiple hypotheses. Composite hypothesis. Non-parametric detection. Wilcoxon detector, sequential detection.

**UNIT II DETECTION OF DETERMINISTIC AND RANDOM SIGNALS 9**

M-ary detection- correlation receiver and matched filter receiver. General binary detection with unwanted parameters. Binary detection in colored noise- Karhunen-Lowve expansion approach, whitening approach and detection performance. Detection and estimation in white Gaussian noise. Detection and estimation in non-white Gaussian noise.

**UNIT III ESTIMATION OF SIGNAL PARAMETERS 9**

Bayesian linear model. Bayesian estimation for deterministic parameters. General Bayesian estimators- Minimum variance unbiased estimation, minimum mean square error estimators, maximum a posteriori estimations. Cramer-Rao bound, Linear Bayesian estimations. Best linear unbiased estimations.

**UNIT IV SIGNAL ESTIMATION IN DISCRETE-TIME 9**

Linear transformation and orthogonality principle. Wiener filters. Discrete Wiener filters. Kalman filters- dynamical signal models, Kalman-Bucy filtering, Wiener-Kolmogorov filtering.

**UNIT V RECENT TECHNIQUES FOR DETECTION AND ESTIMATION PROBLEMS 9**

Applications to detection, parameter estimation and classification- the periodogram and the spectrogram, correlation, Wigner-Ville distribution, spectral correlation and ambiguity function. Cyclo-stationary processing. Higher order moments and poly spectra. Coherence processing.

**TOTAL: 45 PERIODS**

**COURSE OUTCOMES:**

**On successful completion of this course, the students will be able to**

**CO1:** Understand the qualitative problems of Signal Detection and Estimation in the framework of statistical inference.

**CO2:** Understand different hypotheses in Signal Detection and Estimation problems

**CO3:** Write down hypothesis tests and estimation schemes for typical problems of interest.

**CO4:** Gain an understanding of Signal Detection and Estimation of signals in white and non-white Gaussian noise

**CO5:** Understand the detection of random signals

**SPEECH PROCESSING**

**L T P C**  
**3 0 0 3**

**UNIT I BASIC CONCEPTS 9**

Speech Fundamentals: Articulatory Phonetics – Production and Classification of Speech Sounds; Acoustic Phonetics – Acoustics of speech production; discrete time model of speech, Short-Time Fourier Transform. Basics of Linear prediction, autocorrelation method, Levinson Durbin algorithm. Pitch estimation using linear prediction analysis.

**UNIT II FEATURE EXTRACTION 9**

Fundamentals of pattern recognition and significance of feature selection. Homomorphic filtering - Cepstrum. Feature Extraction - MFCC, LPCC and PLP. Speech distortion measures – mathematical and perceptual – Log–Spectral Distance, Cepstral Distances, Weighted Cepstral Distances, Likelihood Distortions. Time alignment and normalization - dynamic time warping, multiple time alignment paths.

**UNIT III SPEECH MODELING 9**

Statistical modeling of speech - Gaussian mixture modeling, Hidden Markov models - Markov processes, HMMVs - Probability Evaluation, optimal state sequence - Viterbi search, Baum-Welch parameter re-estimation

**UNIT IV RECOGNITION ENGINES 9**

Large Vocabulary Continuous Speech Recognition: Architecture of a large vocabulary continuous speech recognition system – acoustics and language models – n-gram statistics, context dependent sub-word units. Speaker recognition - Text dependent and Text independent speaker recognition systems

**UNIT V SPEECH SYNTHESIS****9**

Text-to-Speech Synthesis: Concatenative and waveform synthesis methods, hidden Markov model-based TTS, context dependent sub-word units for TTS, Prosodic modification of speech, voice conversion

**TOTAL: 45 PERIODS****COURSE OUTCOMES:****CO1:** Ability to model speech production system and describe the fundamentals of speech**CO2:** Ability to Extract and compare different speech features**CO3 :** Ability to select an appropriate statistical speech model for a given application**CO4 :** Ability to design and implement a speech and speaker recognition system**CO5:** Ability to Build speech synthesis systems**REFERENCES:**

Network architectures and research issues in cooperative cellular wireless networks; Cooperative communications in OFDM and MIMO cellular relay networks : issues and approaches; Fundamental trade-offs on the design of green radio networks, Green modulation and coding

schemes.

**UNITII COOPERATIVE TECHNIQUES 9**

Cooperative techniques for energy efficiency, Cooperative base station techniques for cellular wireless networks; Turbobasestations; Antenna architectures for cooperation; Cooperative communications in 3GPP LTE-Advanced, Partial information relaying and Coordinated multi-point transmission in LTE-Advanced.

**UNITIII RELAY-BASED COOPERATIVE CELLULAR NETWORKS 9**

Distributed space-time block codes ; Collaborative relaying in downlink cellular systems ; Radio resource optimization; Adaptive resource allocation; Cross-layer scheduling design for cooperative wireless two-way relay networks; Network coding in relay-based networks, Co-operative relaying in NOMA, Coordinated Multipoint transmission in NOMA.

**UNITIV GREEN RADIO NETWORKS 9**

Base Station Power-Management Techniques- Opportunistic spectrum and load management, Energy-saving techniques in cellular wireless base stations , Power-management for base stations in smart grid environment , Cooperative multicell processing techniques for energy-efficient cellular wireless communications.

**UNITV ACCESS TECHNIQUES FOR GREEN RADIO NETWORKS 9**

Cross-layer design of adaptive packet scheduling for green radio networks; Energy- efficient relaying for cooperative cellular wireless networks; Energy performance in TDD-CDMA multi hop cellular networks; Resource allocation for green communication in relay-based cellular networks; Green Radio Test-Beds and Standardization Activities.

**TOTAL: 45PERIODS**

**COURSE OUTCOMES:**

**At the end of the course the student would be**

**CO1:**Able to appreciate the necessity and the design aspects of cooperative and green wireless communication.

**CO2:**Familiar with different techniques used in cooperative cellular networks

**CO3:**Familiar with different techniques used in green radio networks

**CO4:**Able to evolve new techniques and demonstrate their feasibility using mathematical validations and simulation tools.

**CO5:**Able to demonstrate the impact of the green engineering solutions in a global, economic, environmental and societal context.

**CU3018**

**OPTICAL SENSORS AND APPLICATIONS**

**L T P C  
3 0 0 3**

**UNIT I OVERVIEW OF OPTICAL FIBER AND SENSING 9**

Basic characteristics of optical fiber, Classification, dispersion, attenuation, nonlinear optical effects - SRS, SBS, SPM. Modal birefringence and polarization maintaining fibers.  
Fiber optic Sensor – Basic elements of a fiber optic sensor, Categories, Distributed fiber optic system

**UNIT II INTENSITY AND PHASE MODULATED OPTICAL SENSORS 9**

Intensity modulation sensors – Extrinsic and intrinsic type – Transmissive, Reflective, Micro-bending and other Optic Effects sensor. Phase modulation sensors – Michelson Interferometers, Fabry – Perot Interferometer, Mach – Zender Interferometer and Sagnac Interferometer

**UNIT III WAVELENGTH, SCATTERING AND POLARIZATION OPTICAL SENSOR 9**

Wavelength modulation sensors - Bragg grating sensors, Distributed Sensing, Wavelength detection schemes. Scattering based sensors – Losses in fiber, OTDR, Distributed fiber sensing and scattering effects. Polarization based sensors – Birefringent optical systems, Birefringent effect in Bragg gratings

**UNIT IV OPTICAL SENSING TECHNIQUES 9**

Bragg grating based sensors - Temperature, Strain and Displacement Measurement, Interferometric Sensors for Strain and Temperature measurement, Fabry-Perot Optical Sensors for Pressure Measurement, Sensor Packaging.

**UNIT V APPLICATIONS OF OPTICAL SENSORS 9**

Flow Measurement - Laser Doppler velocimetry, Chemical sensors – Fluorescence, RI change, Distributed fiber optic chemical sensors, fiber-optic enabled spectroscopy, Optical gyroscopes, Application and recent trends on biophotonic sensors, Fiber Optic Smart Sensors – Atomic Force Microscope

**TOTAL: 45 PERIODS**

**COURSE OUTCOMES:**

At the end of the course, the student should be able to:

- CO1:** Ability to understand optical principles underlying various optical sensing methods
- CO2:** Ability to comprehend the various modes of modulation of optical signals for sensing
- CO3:** Ability to choose an optical sensing technique for a particular application
- CO4:** Ability to understand apply optical sensing mechanisms for various applications
- CO5:** Ability to apply optical sensing mechanisms for various applications

**CU3019                      ARTIFICIAL INTELLIGENCE AND INTERNET OF THINGS                      L T P C**  
**3 0 0 3**

**UNIT I                      ARTIFICIAL INTELLIGENCE                      9**

Introduction to AI, agent, environment and its Applications; Principles of search, uninformed ("blind") search, informed ("heuristic") search, constraint satisfaction problems, adversarial search and games; AI Models: Knowledge representation and reasoning: rule based representations, declarative or logical formalisms, Logic Programming and logic network; Reasoning in uncertain environments: Genetic algorithms, fuzzy logic, soft computing.

**UNIT II                      AI LEARNING MODELS                      9**

Supervised learning, unsupervised learning, reinforcement learning. Generative discriminative models; Probabilistic models: Bayesian models, probabilistic discriminative models; Optimization methods: gradient descent, multi-objective optimization. Practical cases: natural language

processing, computer vision, bioinformatics, etc.

**UNIT III INTRODUCTION TO IOT 9**

Challenges, IoT network architecture & design: oneM2M, IoTWF, Core functional stack, Data management stack. 'Things' in IoT: Sensors, Actuators, Smart objects, Basics of Sensor Networks.

**UNIT IV COMMUNICATING SMART OBJECTS 9**

Communication criteria, IoT access technologies- IEEE 802.15.4, IEEE 802.15.4e, IEEE 802.11ah, IEEE 1901.2a, NB-IoT. IoT Network Layer: IP as IoT network layer, 6LoWPAN, 6Lo, 6TiSCH, RPL.

**UNIT V IOT APPLICATION LAYER 9**

IoT application transport methods, CoAP, MQTT. Data and Analytics for IoT: IoT Middleware, Data analytics for IoT, Big Data analytics tools and technology. IoT application case study: Smart City, Smart Grid, Smart Transportation, Smart Manufacturing, Smart Healthcare.

**TOTAL: 45 PERIODS**

**COURSE OUTCOMES:**

**At the end of the course, the student should be able to:**

**CO1:**Ability of the student to understand the basics of Artificial intelligence.

**CO2:**Understand and analyze the AI learning models

**CO3:**Ability of the student to understand the basics of Internet of things.

**CO4:**Ability to understand the communication of smart objects and their underlying protocols

**CO5:**Ability to understand the application layer and to work on real time applications

**UNIT I                      IMAGING PRELIMINARIES                      9**

Image Acquisition, Sensors, Image formation, Image transformations: 2D-DFT, DCT, DST, Hadamard, Walsh, Hotelling transformation, 2D-Wavelet transformation, Wavelet packets.

**UNIT II                      IMAGE ENHANCEMENT AND RESTORATION                      9**

Gray-level mapping, non-linear gray-level mapping, image histogram, histogram stretching, histogram equalization. Spatial filters- Smoothing and Sharpening- Frequency domain filters. Image Degradation/Restoration Model- Noise Model- Linear Position Invariant Degradations- Wiener Filtering.

**UNIT III                      IMAGE SEGMENTATION                      9**

Point, Line, and Edge segmentation. Edge linking and Boundary detection. Segmentation using thresholding, Region-based segmentation. Segmentation by morphological watersheds. Use of motion in segmentation.

**UNIT IV                      IMAGE COMPRESSION AND WATER MARKING                      9**

Error free compression: Variable length coding, LZW, Bit-plane coding Lossy compression: Lossy predictive coding, transform coding, wavelet coding. Image compression standards (CCITT, JPEG, JPEG 2000) and Video compression standards. Digital Image Watermarking.

**UNIT V                      FEATURE EXTRACTION                      9**

Boundary Representation - Chain codes, Boundary segments. Boundary Descriptors- Simple, Fourier Descriptors- Regional Descriptors- Simple, Texture. Corner Detection, Scale-invariant Feature Transform (SIFT), Speed-up Robust Features (SURF), Principal Component Analysis.

**TOTAL: 45 PERIODS**

**COURSE OUTCOMES:**

**At the end of the course, the student should be able to:**

- CO1:** To apply a variety of introductory digital image processing techniques
- CO2:** To apply the combinations of enhancement/restoration methods in cases where a single approach is insufficient
- CO3:** To identify the suitable image segmentation techniques for image analysis
- CO4:** To familiar with the understanding of various lossless and lossy image compression techniques
- CO5:** To apply the understanding of extracted image features for further analysis

**AP3054**

**NONLINEAR SIGNAL PROCESSING**

**L T P C  
3 0 0 3**

**UNIT I INTRODUCTION TO NONLINEAR FILTERS AND STATISTICAL PRELIMINARIES**

**9**

Nonlinear filters – measure of robustness – M estimators – L estimators – R estimators – order statistics – median filter and their characteristics – impulsive noise filtering by median filters – Recursive and weighted median filters – stock filters.

**UNIT II NON LINEAR DIGITAL SIGNAL PROCESSING BASED ON ORDER STATISTICS**

**9**

Time ordered nonlinear filters – rank ordered nonlinear filters – max/median filtering – median hybrid filters – characteristics of ranked order filters – L filters – M filters – R filters – comparison.

**UNIT III ADAPTIVE NONLINEAR AND POLYNOMIAL FILTERS**

**9**

Definition of polynomial filters – Wiener filters – robust estimation of scale – Adaptive filter based on local statistics – Decision directed filters – Adaptive L filters – Comparison of adaptive nonlinear filters – Neural networks for nonlinear filter

**UNIT IV ALGORITHMS AND ARCHITECTURES**

**9**

Sorting and selection algorithm – running median algorithm – fast structures for median and order statistics filtering – systolic array implementation – Wave front array implementation – quadratic digital filters implementation

**UNIT V APPLICATIONS OF NONLINEAR FILTERS**

**9**

Power spectrum analysis – Morphological image processing – nonlinear edge detection impulse noise rejection in image and bio signals – two component image filtering – speech processing

**TOTAL: 45 PERIODS**

## COURSE OUTCOMES

**CO1:** Ability to evaluate the characteristics of nonlinear filters

**CO2:** Ability to design and implement rank order filters.

**CO3:** Ability to develop polynomial filters.

**CO4:** Ability to design architectures for nonlinear filters.

**CO5:** Ability to implement nonlinear filters for different types of signals.

**AP3055**

**RF INTEGRATED CIRCUIT DESIGN**

**L T P C**

**3 0 0 3**

### **UNIT I CMOS PHYSICS, TRANSCEIVER SPECIFICATIONS AND ARCHITECTURES**

**9**

Introduction to MOSFET Physics, Noise: Thermal, shot, flicker, popcorn noise, Two port Noise theory, Noise Figure, THD, IP2, IP3, Sensitivity, SFDR, Phase noise - Specification distribution over a communication link, Homodyne Receiver, Heterodyne Receiver, Image reject, Low IF Receiver Architectures Direct up conversion Transmitter, Two step up conversion Transmitter.

### **UNIT II IMPEDANCE MATCHING AND AMPLIFIERS**

**9**

S-parameters with Smith chart, Passive IC components, Impedance matching networks, Common Gate, Common Source Amplifiers, OC Time constants in bandwidth estimation and enhancement, High frequency amplifier design, Power match and Noise match, Single ended and Differential LNAs, Terminated with Resistors and Source Degeneration LNAs.

### **UNIT III FEEDBACK SYSTEMS AND POWER AMPLIFIERS**

**9**

Stability of feedback systems: Gain and phase margin, Root-locus techniques, Time and Frequency domain considerations, Compensation, General model — Class A, AB, B, C, D, E and F amplifiers, Power amplifier Linearization Techniques, Efficiency boosting techniques, ACPR metric, Design considerations

**UNIT IV MIXERS AND OSCILLATORS****9**

Mixer characteristics, Non-linear based mixers, Quadratic mixers, Multiplier based mixers, Single balanced and double balanced mixers, subsampling mixers, Oscillators describing Functions, Colpitts oscillators Resonators, Tuned Oscillators, Negative resistance oscillators, Phase noise.

**UNIT V PLL AND FREQUENCY SYNTHESIZERS****9**

Linearized Model, Noise properties, Phase detectors, Loop filters and Charge pumps, Integer-N frequency synthesizers, Direct Digital Frequency synthesizers.

**TOTAL: 45 PERIODS****COURSE OUTCOMES:****CO1:** Ability to explore user specifications for RF systems**CO2:** Ability to analyze and design RF low noise amplifiers.**CO3:** Ability to analyze and design RF power amplifiers.**CO4:** Ability to analyze and design RF mixers and oscillators**CO5:** Ability to design PLL for RF applications.**REFERENCE BOOKS:**

**VL3151****DIGITAL CMOS VLSI DESIGN****L T P C****3 0 0 3****UNIT I MOS TRANSISTOR PRINCIPLES AND CMOS INVERTER****12**

MOS(FET) Transistor Characteristic under Static and Dynamic Conditions, MOS Transistor Secondary Effects, CMOS Inverter-Static Characteristic, Dynamic Characteristic, Power, Energy, and Energy Delay parameters, Stick diagram and Layout diagrams.

**UNIT II COMBINATIONAL LOGIC CIRCUITS****9**

Static CMOS design, Different styles of logic circuits, Logical effort of complex gates, Static and Dynamic properties of complex gates, Interconnect Delay, Dynamic Logic Gates.

**UNIT III SEQUENTIAL LOGIC CIRCUITS****9**

Static Latches and Registers, Dynamic Latches and Registers, Timing Issues, Pipelines, Nonbistable Sequential Circuits.

**UNIT IV ARITHMETIC BUILDING BLOCKS****9**

Data path circuits, Architectures for Adders, Accumulators, Multipliers, Barrel Shifters, Speed and Area Tradeoffs

**UNIT V MEMORY ARCHITECTURES****6**

Memory Architectures and Memory control circuits : Read-Only Memories, ROM cells, Read- write memories (RAM), dynamic memory design, 6 transistor SRAM cell, Sense amplifiers.

**TOTAL : 45 PERIODS****COURSE OUTCOMES:**

**CO1:**To be able to use mathematical methods and circuit analysis models in analysis of CMOS digital circuits

**CO2:**To be able to create models of moderately sized static CMOS combinational circuits that realize specified digital functions and to optimize combinational circuit delay using RC delay models and logical effort

**CO3:**To be able to design sequential logic at the transistor level and Compare the tradeoffs of sequencing elements including flip-flops, transparent latches

**CO4:**To be able to learn design methodology of arithmetic building blocks

**CO5:**To be able to design functional units including ROM and SRAM

**VL3012****SIGNAL PROCESSING IN VLSI DESIGN****L T P C  
3 0 0 3****UNIT I INTRODUCTION TO DSP SYSTEMS, PIPELINING AND PARALLEL PROCESSING OF FIR FILTERS****9**

Introduction to DSP systems – Typical DSP algorithms, Data flow and Dependence graphs - critical path, Loop bound, iteration bound, Longest path matrix algorithm, Pipelining and Parallel

processing of FIR filters, Pipelining and Parallel processing for low power.

**UNIT II RETIMING, ALGORITHMIC STRENGTH REDUCTION 9**

Retiming – definitions and properties, Unfolding – an algorithm for unfolding, properties of unfolding, sample period reduction and parallel processing application, Algorithmic strength reduction in filters and transforms – 2-parallel FIR filter, 2-parallel fast FIR filter, DCT architecture, rank-order filters, Odd-Even merge-sort architecture, parallel rank- order filters.

**UNIT III FAST CONVOLUTION, PIPELINING AND PARALLEL PROCESSING OF IIR FILTERS 9**

Fast convolution – Cook-Toom algorithm, modified Cook-Toom algorithm, Pipelined and parallel recursive filters – Look-Ahead pipelining in first-order IIR filters, Look-Ahead pipelining with power- of-2 decomposition, Clustered look-ahead pipelining, Parallel processing of IIR filters, combined pipelining and parallel processing of IIR filters.

**UNIT IV BIT-LEVEL ARITHMETIC ARCHITECTURES 9**

Bit-level arithmetic architectures – parallel multipliers with sign extension, parallel carry ripple and carry-save multipliers, Design of Lyon’s bit-serial multipliers using Horner’s rule, bit-serial FIR filter, CSD representation, CSD multiplication using Horner’s rule for precision improvement, Distributed Arithmetic fundamentals and FIR filters.

**UNIT V NUMERICAL STRENGTH REDUCTION, SYNCHRONOUS, WAVE AND ASYNCHRONOUS PIPELINING 9**

Numerical strength reduction – sub expression elimination, multiple constant multiplication, iterative matching, synchronous pipelining and clocking styles, clock skew in edge-triggered single phase clocking, two-phase clocking, wave pipelining. Asynchronous pipelining bundled data versus dual rail protocol.

**TOTAL : 45 PERIODS**

**COURSE OUTCOMES:**

- CO1:** Ability to determine the parameters influencing the efficiency of DSP architectures and apply pipelining and parallel processing techniques to alter FIR structures for efficiency
- CO2:** Ability to analyse and modify the design equations leading to efficient DSP architectures for transforms
- CO3:** Ability to speed up convolution process and develop fast and area efficient IIR structures
- CO4:** Ability to develop fast and area efficient multiplier architectures
- CO5:** Ability to reduce multiplications and build fast hardware for synchronous digital systems
