Vision of the Department

The Department of Instrumentation Engineering perseveres in becoming a Centre for Excellence in Electronics, Instrumentation and Control Engineering for Higher level learning, Research and Consultancy. The Department aims at imparting high quality education to students and professionals leading them to global competence. Its endeavor is to become a preferred partner to the industry and community for providing Engineering solutions.

Mission of the Department

- Provide the students with strong foundation in Electronics, Instrumentation and Control Engineering.
- Enhance the core competency of the students to cater to the needs of the industries and research organizations.
- Update the curriculum periodically and to upgrade the laboratories with state-of-art equipment.
- Encourage faculty members to keep abreast of current trends through continuing educational programs.
- Carry out interdisciplinary research and consultancy in the cutting-edge technology.
ANNA UNIVERSITY, CHENNAI
UNIVERSITY DEPARTMENTS
REGULATIONS – 2019
CHOICE BASED CREDIT SYSTEM

M.E INSTRUMENTATION ENGINEERING

PROGRAMME EDUCATIONAL OBJECTIVES (PEOs):

Master of Instrumentation Engineering curriculum is designed to prepare the graduates to acquire knowledge, skills and attitudes in order to:

1. Excel in their preferred profession in government and private sectors.
2. Involve in life-long learning and work as faculty members in reputed educational institutions, imparting knowledge and skills in the field of instrumentation engineering to the younger generations thereby producing talented engineers.
3. Carry out ground-breaking research in emerging areas in the field of instrumentation engineering, and thereby solving various technical and societal problems at national and global levels.
4. Promote new ideas, innovation solutions and alternative methods in their work places contributing to the development of entrepreneurship.
5. Adhere to professional ethics and exhibit leadership and inter-personal skills in their workplace.

PROGRAMME OUTCOMES (POs):

The graduates will have

1. An ability to independently carry out research and developmental work and arrive at well founded solutions for complex Instrumentation Engineering problems.
2. An ability to communicate efficiently the engineering facts with a wide range of engineering community and others, to understand and prepare reports and design documents; to make effective presentation and to frame and follow instructions.
3. Ability to analyze complex problems in Instrumentation domain and recommend right solutions with acquired mastery technical knowledge in Instrumentation Engineering.
4. Select and apply relevant techniques, Engineering and IT tools for Engineering activities like modeling and control of systems/processes and also being conscious of the limitations.
5. Demonstrate the knowledge and understanding of Engineering and Management principles and to apply these to one’s own work as a member / leader in a team to manage Electronics / Instrumentation / Control and Automation projects and multidisciplinary environments.
6. Recognize the need for self and life-long learning, keeping pace with technological challenges in the broadest sense.

PROGRAM SPECIFIC OUTCOMES (PSOs):

After completion of Instrumentation Engineering program, students be able to gain core competency skills in domains such as Instrumentation and Process control.

1. Students will be able to design, develop and validate models for sensors, actuators, and industrial processes.
2. Students will be able to design, develop, and implement control schemes for various industrial processes.
3. Students will be able to configure Industrial Automation Systems such as PLC and DCS and thereby achieve centralized monitoring and decentralized control of industrial processes.

**Total Credit**: 72
COURSE OBJECTIVES

- To make the students understand the methods to numerically solve the set of simultaneous ordinary differential equations.
- To make the students understand the methods to numerically solve the partial differential equations.
- To make the students understand the finite element methods for solving the PDEs.
- To get exposed to the ideas of obtaining the most optimal solution for a problem with given constraints.
- To teach the students to decompose the optimization problem into subspaces and hence solve recursively.

UNIT I  ORDINARY DIFFERENTIAL EQUATIONS

Runge Kutta Methods for system of IVPs, numerical stability, Adams-Bashforth multistep method, solution of stiff ODEs, shooting method, BVP: Finite difference method, collocation method, orthogonal collocation method, Galerkin finite element method.

UNIT II  FINITE DIFFERENCE METHOD FOR PARTIAL DIFFERENTIAL EQUATIONS

UNIT III  FINITE ELEMENT METHOD

UNIT IV  LINEAR PROGRAMMING

Two variable LP model - Graphical solution - Simplex method - Special cases in the simplex method - Transportation and Assignment problem.

UNIT V  DETERMINISTIC DYNAMIC PROGRAMMING

TOTAL : 60 PERIODS

COURSE OUTCOMES

At the end of the course, students will be able to

- Solve the simultaneous ordinary differential equations (Initial Value Problem) numerically.
- Solve numerically set of Partial differential equations.
- Solve the set of PDEs by finite element method.
- Obtain the most optimal solution for a constrained optimization problem.
- Handle the Dynamic Programming problems using forward and backward recursion.

IN5101  TRANSDUCERS AND SMART INSTRUMENTS  L  T  P  C
3  0  0  3

COURSE OBJECTIVES
- To impart knowledge on transducer characteristics.
- To make the students understand the importance of error analysis and to determine the uncertainties associated with measuring instruments.
- To make the students understand the importance of smart sensor technologies and familiarization of standards for smart sensor Interface.
- To provide exposure to manufacturing techniques and different types of Micro sensors and actuators.
- To provide an overview of latest advancement and trends in transducers and smart instruments.

UNIT I  OVERVIEW OF CONVENTIONAL TRANSDUCERS AND ITS CHARACTERISTICS  9
Overview of conventional sensors - Resistive, Capacitive, Inductive, Piezoelectric, Magnetostrictive and Hall effect sensors - Static and Dynamic Characteristics of Transducers and specifications.

UNIT II  MEASUREMENT ERROR AND UNCERTAINTY ANALYSIS  9
Importance of error analysis - precision and accuracy - Random errors - Distributions, mean, width of the distribution and standard error - Uncertainty as probability - Gaussian and Poisson probability distribution functions, confidence limits, error bars, and central limit theorem - Error propagation - single and multi-variable functions, propagating error in functions - Data visualization and reduction - Least square fitting of complex functions.

UNIT III  SMART SENSORS  9

UNIT IV  MICRO SENSORS AND ACTUATORS  9

UNIT V  RECENT TRENDS IN SENSOR TECHNOLOGIES  9

COURSE OUTCOMES
1. Ability to categorize and characterize a conventional transducer
2. Ability to analyze and quantify the uncertainties in measurement data
3. Ability to design smart sensors with special features.
4. Acquire a comprehensive Knowledge of manufacturing techniques and design aspects of micro sensors and actuators
5. Keep abreast of latest sensor technology and advanced measurement methodologies
6. Ability to suggest a proper transducer for an application

COURSE OBJECTIVES

- To provide knowledge on measurement techniques, selection, application and calibration of temperature and pressure sensors.
- To make students understand the construction, working principle, application, selection and calibration of various transducers used for the measurement of flow and level.
- To make students aware of the various available methods of chemical analysis of a given chemical sample with specific emphasis on spectroscopy, chromatography, electrochemical analysis and mass spectrometry.
- To make the students aware of basic concepts of safety instrumented system and familiarize with Instrumentation standards.
- To make students familiarize with Instrumentation Symbols, Abbreviations and Identification for Instruments, Process Flow diagrams, Instrument Loop diagrams, Instrument Hookup diagrams and Piping and Instrumentation Diagrams.

UNIT I MEASUREMENT OF PROCESS PARAMETERS – TEMPERATURE AND PRESSURE

TEMPERATURE:

PRESSURE:
Units of pressure – Manometers – Elastic type pressure gauges – Electrical pressure transducers – Fiber optic pressure sensor
Measurement of vacuum: McLeod gauge, Cold cathode type and hot cathode type ionization gauges – Pressure gauge selection, installation and calibration.

UNIT II MEASUREMENT OF PROCESS PARAMETERS – FLOW AND LEVEL

FLOW
Variable head flow meters – positive displacement flow meters-variable area flow meters – Electrical type flow meters – Open channel flow measurement – Solid flow measurement.

LEVEL
Float gauges – Displacer type – Bubbler system – Load cell – Conductivity sensors – Capacitive sensors – D/P methods – Ultrasonic level sensors – Solid level measurement.

UNIT III INSTRUMENTS FOR CHEMICAL ANALYSIS

UNIT IV SAFETY INSTRUMENTATION & INSTRUMENTATION STANDARDS

UNIT V DOCUMENTATION IN PROCESS INDUSTRIES

Block Diagram of a Typical Process – Instrumentation Symbols, Abbreviations and

TOTAL : 45 PERIODS

COURSE OUTCOMES (COs)
1. Ability to understand the construction, working and calibration of temperature, pressure, flow and level sensors.
2. Ability to understand the working principle of different chemical analyzers.
3. Ability to select instruments for specific application.
4. Ability to understand the role of Safety instrumented system and instrumentation standards in the industry.
5. Ability to analyze process hazards and apply risk assessment techniques for an industrial plant.
6. Design, develop, and interpret the documents used to define instruments and control systems for a typical project, including P&IDs, loop diagrams, instrument lists, logic diagrams, installation details, and location plans.

COURSE OBJECTIVES
- To provide a comprehensive review of digital signals, systems and filters.
- To provide the foundation for signal modeling, linear prediction and estimation theory.
- To impart knowledge on adaptive filter design, multi-rate signal processing and filter banks.

UNIT I REVIEW OF DIGITAL SIGNALS, SYSTEMS AND FILTERS

UNIT II RANDOM SIGNAL PROCESSING AND SPECTRUM ESTIMATION

UNIT III LINEAR ESTIMATION AND PREDICTION

UNIT IV ADAPTIVE FILTERS

UNIT V MULTIRATE DIGITAL SIGNAL PROCESSING
Introduction to Multirate signal processing, Decimation and Interpolation by an integer factor, Quadrature Mirror Filters, Subband coding, Polyphase realization, Limitations of Fourier transform, Time-frequency representation, Short time Fourier transform – Definition, Fourier Representation, Filter bank implementation, Introduction to Wavelet transform – Relation to Multirate filter banks, Time frequency representation, Wavelet System and its characteristics, CWT and DWT basis functions.

TOTAL : 45 PERIODS

COURSE OUTCOMES
1. Ability to apply the knowledge of mathematics, science, and engineering for the analysis and design of digital systems
2. Ability to identify, formulate and solve engineering problems in the area of random signal processing and spectrum estimation.
3. Ability to estimate the states of the stochastic system using Kalman filter.
4. Ability to design adaptive filters using recursive algorithms with realistic constraints.
5. Analyze multirate systems and filter banks
6. Ability to select the analysis tools and design algorithms for the implementation of adaptive
systems.

COURSE OBJECTIVES

- To introduce the technical terms associated with Process Control domain and impart the knowledge on mathematical modeling of processes
- To provide an overview of the features associated with Industrial Type PID Controller such as reset windup, bumpless auto-manual transfer, proportional kick and derivative kick.
- To make the students understand the various PID tuning methods
- To elaborate different types of control schemes such as cascade control, feed-forward control, DMC, GPC, Inferential control schemes, Multi-variable control schemes etc.

UNIT I PROCESS DYNAMICS

UNIT II CONTROL ACTIONS, PID CONTROLLER TUNING – SINGLE LOOP REGULATORY CONTROL

UNIT III ENHANCEMENT TO SINGLE LOOP REGULATORY CONTROL & MODEL BASED CONTROL SCHEMES

UNIT IV MULTIVARIABLE SYSTEMS & MULTI-LOOP REGULATORY CONTROL

UNIT V MULTIVARIABLE REGULATORY CONTROL & CASE STUDIES

TOTAL : 45 PERIODS

COURSE OUTCOMES

1. Ability to Apply knowledge of mathematics, science, and engineering to the build and
analyze models for flow, level, and thermal processes
2. Ability to determine the advanced features supported by the Industrial Type PID Controller.
3. Ability to design, tune and implement SISO P/PI/PID Controllers to achieve desired Performance for various processes
4. Ability to analyze Multivariable Systems and Design Multi-variable and Multi-loop Control Schemes for various processes namely four-tank system, pH process, bio-reactor, distillation column
5. Ability to Identify, formulate, and solve problems in the process control domain
6. Ability to analyze various advanced control schemes and recommend the right control strategy for a given application in accordance with the industrial requirement.

COURSE OBJECTIVES:
To impart knowledge and skills required for research and IPR:
• Problem formulation, analysis and solutions.
• Technical paper writing / presentation without violating professional ethics
• Patent drafting and filing patents.

UNIT I  RESEARCH PROBLEM FORMULATION  6
Meaning of research problem- Sources of research problem, criteria characteristics of a good research problem, errors in selecting a research problem, scope and objectives of research problem. Approaches of investigation of solutions for research problem, data collection, analysis, interpretation, necessary instrumentations

UNIT II  LITERATURE REVIEW  6
Effective literature studies approaches, analysis, plagiarism, and research ethics.

UNIT III  TECHNICAL WRITING /PRESENTATION  6
Effective technical writing, how to write report, paper, developing a research proposal, format of research proposal, a presentation and assessment by a review committee.

UNIT IV  INTRODUCTION TO INTELLECTUAL PROPERTY RIGHTS (IPR)  6

UNIT V  INTELLECTUAL PROPERTY RIGHTS (IPR)  6

COURSE OUTCOMES:
1. Ability to formulate research problem
2. Ability to carry out research analysis
3. Ability to follow research ethics
4. Ability to understand that today’s world is controlled by Computer, Information Technology, but tomorrow world will be ruled by ideas, concept, and creativity.
5. Ability to understand about IPR and filing patents in R & D.

COURSE OBJECTIVES
To impart theoretical and practical skills in
- Process Identification
- Tuning of PID controller including Auto-tuning
- PID Enhancements and
- Design of advanced control schemes such as Gain Scheduled PID Controller, Fuzzy Logic Controller and Model Predictive Controller

List of Experiments
1. (a) Calibration of ammeter, voltmeter and wattmeter using multifunction calibrator.
   (b) Calibration and configuration of smart transmitter using HART communicator.
   (c) Calibration and configuration of transmitters using loop calibrator.
2. Interfacing different types of flow meters with PC using DAQ.
3. Interpretation of P & ID (ISA S5.1)
4. Simulation of Lumped/ Distributed Parameter System.
5. Identification of Transfer function model of a Typical Industrial Process.
7. Design and Implementation of Feed forward and Cascade control schemes on the simulated model of a Typical Industrial Process.
8. (a) Analysis of MIMO system.
   (b) Design and implementation of Multi-loop PID and Multivariable PID control schemes on the simulated model of a Typical Industrial Process.
9. Control of flow process using industrial type PID controller.
10. PC based control of Level process.
11. Design and implementation of Gain scheduled Adaptive controller on the simulated model of a variable area tank process.
12. Design and implementation of a Fuzzy Logic Control scheme on the simulated model of a Typical Industrial Process.

TOTAL : 60 PERIODS

COURSE OUTCOMES
1. Gain hands on experience in working with SKID mounted pilot plants (Flow/Level/Temperature/ Pressure Control Loop(s))
2. Get exposed to simulation tools such as MATLAB/LABVIEW/ASPEN.
3. Be able to build dynamic models using the input-output data of a process.
4. Get acquainted with PID implementation issues and be able to tune the PID controller.
5. Ability to obtain servo and regulatory responses and be able to analyze and draw meaningful conclusions.
6. Be able to design and implement Feed-forward, cascade control scheme, simple adaptive control scheme, model based control scheme and fuzzy logic control scheme.

COURSE OBJECTIVES
- To introduce the architectural features and associated peripherals of embedded system.
- To impart knowledge on Embedded C-programming.
- To provide an insight over the practical aspects of interfacing field devices with microcontroller.
- To facilitate the students to realize the significant features of real time embedded system.
- To enable the students to utilize the power of IOT for embedded applications.

LIST OF EXPERIMENTS

Practical Module – 1 Introduction to Embedded System

Objective(s)
- To introduce embedded system and its fundamental building blocks.
- To make the students familiar with the architectural features of microcontrollers and the basic concept of embedded C programming.

Demonstration
- Building the source code for the required application on an Integrated Development Environment and loading the same onto the chosen microcontroller through In System Programming (ISP).

Experiment(s)
- Implementing Arithmetic and logical operations using Embedded C.
- Implementing conditional and loop control operations using Embedded C.

Assignment(s)
- Building a simple calculator.
- Development of simple applications using recursion.

Practical Module – 2 Interrupts & Timers

Objective(s)
- To make the students understand the concept of interrupts and timers.
- To enable the students to effectively use interrupts and timers for embedded control applications

Demonstration
- Frequency measurement using Timer/counter

Experiment(s)
- Interfacing limit switch using hardware interrupts.
- Design of a programmable Timer.

Assignment(s)
- Generation of interrupt using Timer to activate/deactivate field devices

Practical Module - 3 ADC/DAC

Objective(s)
- To make the students understand the operational features of various types of ADCs / DACs.
- To provide an insight over data acquisition to carry out signal processing.

Demonstration
- Interfacing ADC/DAC with microcontroller using Proteus Design Suite.
- Acquisition of a continuous signal and reconstruction of its sampled version.
Experiment(s) • Interfacing analog transmitter with microcontroller.
• Interfacing final control element with microcontroller.
Assignment(s) • Design of a multichannel data acquisition system.
• Design of a smart transmitter.

Practical Module – 4 Communication Modules

Objective(s) • To make the students familiar with synchronous (I2C & SPI) and asynchronous (UART) communication protocols
• To impart knowledge on establishing communication between microcontrollers and peripherals using appropriate serial communication protocols

Demonstration • Remote data transmission using both synchronous and asynchronous communication protocols.

Experiment(s) • I2C based DAC interface and SPI based ADC interface.
• Remote transmission of field transmitter data to PC.

Assignment(s) • Interfacing RTC with microcontroller using I2C interface.
• Interfacing EEPROM with microcontroller using SPI interface.

Practical Module – 5 Wireless Communication Modules

Objective(s) • To introduce various wireless communication protocols
• To facilitate the students to acquire field parameters through wireless communication Protocols

Demonstration • Establishing communication between microcontroller and PC using Zigbee module.

Experiment(s) • Remote transmission of sensor data using Zigbee protocol.

Assignment(s) • Remote monitoring of process using Zigbee protocol.

Practical Module – 6 RTOS Concepts

Objective(s) • To facilitate the students to realize the power of RTOS and its operational characteristics
• To enable the students to perform task scheduling and establish inter-task communication

Demonstration • Implementing multitasks on an RTOS enabled embedded system

Experiment(s) • Design of a multichannel data acquisition system with time, interrupt, task and memory management features.

Assignment(s) • Implementation of a real-time control application (Inverted pendulum or dc motor etc.) using RTOS.

Practical Module – 7 Design of Feedback Control System
Objective(s) • To impart knowledge on the development of embedded control system
• To make the students realize the challenges in an embedded system design for a given application

Demonstration • Implementation of a simple feedback controller on the temperature process.

Experiment(s) • Realization of PID Control Algorithm in microcontroller.

Assignment(s) • Design and Implementation of PID controller on the temperature process.

Practical Module – 8 IoT Enabled Embedded Systems

Objective(s) • To impart knowledge on the inherent features of IoT for embedded applications
• To enable the students to carry out IoT enabled data acquisition

Demonstration • Building an IoT application using Python

Experiment(s) • IoT enabled field sensing

Assignment(s) • Development of IoT enabled transmitter.

Practical Module – 9 PSoC for Embedded Control Applications

Objective(s) • To make the students understand the configurable features of PSoC
• To facilitate the students to exploit the built-in facilities of PSoC for control applications

Demonstration • Programming the PSoC using PSoC programmer.

Experiment(s) • Data acquisition and control using PSoC.

Assignment(s) • Reconstruction of an analog signal from its digital equivalent.

Practical Module - 10 DSP Processor for Embedded Systems

Objective(s) • To make the students understand the salient features of Digital Signal Processors

Demonstration • Realizing the power of Digital Signal Processors for real-time processing requirements

Experiment(s) • Design and implementation of FIR filter using Microcontroller and DSP

Assignment(s) • Design and implementation of IIR filter using Microcontroller and DSP

Practical Module – 11 Image Processing based Embedded Applications

Objective(s) • To make the students understand the use of image processing in embedded control applications
• To design and implement embedded image processing applications

Demonstration • Camera interfacing with Raspberry Pi

Experiment(s) • Image acquisition and processing using Raspberry Pi

Assignment(s) • Design of a field surveillance system.
COURSE OUTCOMES
1. Ability to realize the functions of various constitutional modules of an embedded system.
2. Ability to formulate suitable strategies for interfacing real world sensors and actuators with microcontrollers.
3. Ability to recognize the operational behavior of RTOS based systems and use them efficiently in design environments.
4. Ability to identify, formulate and apply embedded control strategies for industrial applications.
5. Ability to infer the concept of IoT and demonstrate its power in real world applications.
6. Ability to devise design strategies for industrial embedded applications.

COURSE OBJECTIVES

- To teach students to build and analyze models for time-varying systems and non-linear systems.
- To develop the skills needed to design adaptive controllers such as gain-scheduled adaptive controller, Model-reference adaptive controller and Self-tuning controller for various applications.
- To make the students learn to formulate optimal control schemes.
- To provide basic knowledge about Fractional-order systems and Fractional-order controller and to lay the foundation for the systematic approach to Design controller for fractional order systems.
- To develop the skills needed to design H-infinity Controller.
- To introduce FDI Techniques, such as Principal component Analysis, state observer to detect and diagnose faults in sensors and actuators.

UNIT I CONTROL OF TIME-VARYING AND NONLINEAR SYSTEMS

UNIT II OPTIMAL CONTROL & FILTERING

UNIT III FRACTIONAL ORDER SYSTEM & CONTROLLER

Fractional-order Calculus and Its Computations - Frequency and Time Domain Analysis of Fractional-Order Linear Systems - Filter Approximations to Fractional-Order Differentiations – Model reduction Techniques for Fractional Order Systems –Controller Design Studies for Fractional Order.

UNIT IV H-INFINITY CONTROLLER

UNIT V FAULT DIAGNOSIS AND FAULT-TOLERANT CONTROL

COURSE OUTCOMES

1. Ability to apply knowledge of mathematics, science, and engineering to build and analyze models for time-varying systems and non-linear systems.
2. Ability to design and implement adaptive controllers such as gain-scheduled adaptive controller, Model-reference adaptive controller and Self-tuning controller.
3. Ability to Identify, formulate, and solve optimal controller.
4. Ability to Analyze Fractional-order systems, Fractional-order- controller and Design controller for fractional order systems

5. Ability to design and implement $H_2$ and H-infinity Controllers

6. Ability to use the FDI Techniques, such as Principal component Analysis, state observer to detect and diagnose faults in sensors and actuators

COURSE OBJECTIVES

- To impart knowledge on the design of signal conditioning circuits for the measurement of Level, temperature and pH.
- To develop the skills needed to design, fabricate and test Analog/ Digital PID controller, Data Loggers and Alarm Annunciator
- To make the students familiarize with regard to orifice sizing and control valve sizing.

UNIT I DESIGN OF SIGNAL CONDITIONING CIRCUITS

UNIT II DESIGN OF TRANSMITTERS

Design of 2 wire and 4 wire transmitters:–RTD based Temperature Transmitter, Thermocouple based Temperature Transmitter, Capacitance based Level Transmitter, Smart Flow Transmitters and IoT enabled transmitters.

UNIT III DESIGN OF DATA LOGGER AND PID CONTROLLER

Micro - controller based Data Logger - Design of PC based Data Acquisition Cards - Design of ON / OFF Controller using Analog Circuits - Electronic PID Controller - Microcontroller Based PID Controller.

UNIT IV DESIGN OF ALARM AND ANNUNCIATION CIRCUIT

UNIT V ORIFICE AND CONTROL VALVE SIZING

Orifice, Venturi and flow nozzle Sizing: - Liquid, Gas and steam services – Control valve sizing – Liquid, Gas and steam Services and Standards.

TOTAL : 45 PERIODS

COURSE OUTCOMES

1. Competence to design signal conditioning circuits for temperature sensors, V/I and I/V converters
2. Ability to design, fabricate and test smart transmitters
3. Ability to design, fabricate and test PID controllers.
4. Ability to carry out orifice and control valve sizing for Liquid/Steam Services
5. Exposure to simulation tools such as MATLAB.
6. Capability to design PLC and alarm circuits

COURSE OBJECTIVES

- To provide an introduction to several fundamental concepts and methods for machine learning.
- To teach machine learning algorithms and their applications.
- To provide the knowledge related to processing, analyzing and handling data set.
- To illustrate the typical applications of various clustering based learning algorithms.
- To impart knowledge on bayesian based learning algorithms.

UNIT I INTRODUCTION TO MACHINE LEARNING

UNIT II DATA PREPROCESSING

Data preprocessing: Data Cleaning:– Handling missing data and noisy data – Data integration:– Redundancy and correlation analysis - Data Reduction:– Dimensionality reduction:– Linear Discriminant Analysis, Principal Components Analysis, Factor Analysis, Independent Components Analysis and Numerosity Reduction - Data Compression - Data Normalization and Data Discretization.

UNIT III SUPERVISED LEARNING

UNIT IV UNSUPERVISED LEARNING

UNIT V BAYESIAN LEARNING

Probability based clustering – The Expectation Maximization Algorithm – Bayesian Classification – Bayesian Networks – Learning Bayesian Networks – Hidden Markov Models- Case studies

TOTAL : 45 PERIODS

COURSE OUTCOMES

1. Ability to understand the basic theory underlying machine learning.
2. Ability to understand a range of machine learning algorithms along with their strengths & weaknesses and able to select appropriate ML algorithm.
3. Ability to formulate machine learning problems corresponding to different applications.
4. Ability to apply machine learning algorithms to solve problems of moderate complexity.
5. Ability to read and understand the work reported in the research papers in the area of machine learning.
6. Gain capacity to select suitable software tools, understand and develop codes for machine learning algorithms to solve moderately complex problems.

COURSE OBJECTIVES

- To impart knowledge on architecture of PLC and DCS.
- To introduce students on how to program using all five IEC-61131-3 programming languages.
- To introduce students on how to interface Field devices (Conventional/Smart) with PLC and DCS.
- To make the students configure the IoT gateway

LIST OF EXPERIMENTS

Practical Module – 1: Study of PLC architecture and Field Device Interface Modules (AI, AO, DI, DO Modules).

Objective(s)  
Impart knowledge on PLC architecture including CPU, I/O module, connecting I/O modules (DI/DO/AI/AO modules) to CPU, Power supply module and Communication module & Hot swapping, Industrial certifications.

Demonstration  
Configuration of a PLC.

Experiment(s)  
1. Study of DI/DO/AI/AO modules of all PLCs.
2. Installation & Configuration of I/O modules
3. Understanding one of the PLC Control panels wiring diagram and creating a control panel layout

Assignment(s)  
1. Comparison of all PLCs in the lab.
2. Market survey of the recent PLCs and comparison of their features with the PLCs available in the lab.

Practical Module – 2: Programming PLC using IEC 61131-3 PLC Programming Languages

Objective(s)  
To introduce students on how to program using all five IEC-61131-3 programming languages.

Demonstration  
Procedure for Programming PLC using all IEC 61131-3 PLC Programming Languages. - Case Study - Filling and draining of liquid in a single tank.

Experiment(s)  
1. Implementation of Alarm-Annunciator sequences (ISA 18.1 Standard) using all IEC 61131-3 PLC Programming Languages.

Assignment(s)  
1. Implementation of Traffic light control sequences using all IEC 61131-3 PLC Programming Languages
2. Exercises covering all instruction sets/Function Blocks etc.

Practical Module – 3 Interfacing Analog/Digital Input/output Devices with Industrial
Type PLC.

**Objective(s)** To introduce students on how to interface transmitters, limit switches, final control elements with PLC.

**Demonstration** How to Interface field devices to a PLC – Case Study: How to interface field devices available in the filling and draining of liquid in a single tank experimental test setup to a PLC.

**Experiment(s)**
1. Interfacing Level Transmitter and Control valve with PLC.
2. Interfacing Limit switches and a Pump with PLC.

**Assignment(s)**
1. Interfacing Temperature Transmitter and Heater with PLC.
2. Interfacing Flow Transmitter and Variable-speed pump with PLC.

**Practical Module – 4 Closed loop control of a typical process using PLC.**

**Objective(s)** To introduce students on how to configure PID control block to achieve closed loop control.

**Demonstration** Configuration of PID Function Block.

**Experiment** On-line Monitoring and Control of Level Process using PLC.

**Assignment(s)** On-line Monitoring and Control of Processes such as Flow, Temperature and Pressure, using PLC.

**Practical Module – 5 HMI/SCADA Programming**

**Objective(s)** SCADA/HMI development, configuration of face plates, creation of logs, Transmitter data trend displays, linking of tags with graphics.

**Demonstration** HMI/SCADA development for the Pressure Control Station.

**Experiment(s)**
- HMI/SCADA development for the Process Control Training Plant (Level/Flow Process)
- HMI/SCADA development for a Typical Industrial Processes

**Assignment(s)**

**Practical Module - 6. Study of Safety PLC**

**Objective(s)** To make the students understand the fundamental differences between Safety PLC and Standard PLC.

**Demonstration(s)** Procedure for Programming Safety PLC and Configuration of Fail-safe I/O Modules.

**Experiment(s)**
1. Study of Fail-safe I/O modules.
2. Implementation of Alarm-Annunciator sequences (ISA 18.1 Standard) in Safety PLC.

**Assignment(s)** Market survey of the recent safety PLCs and comparison of their features with the PLC available in the lab.

**Practical Module-7 Architecture of DCS**

**Objective(s)** Impart knowledge on DCS architecture including CPU, I/O module, connecting I/O modules (DI/DO/AI/OA modules) to CPU, Power supply module and Communication module & Hot swapping, Industrial
Demonstration  
Configuration of DCS.

Experiment(s)  
1. Study of AI, AO, DI, DO, H1-interface modules of all DCSs.  
2. Installation & Configuration of I/O modules.  
3. Understanding any one of the DCS Control panels wiring diagram and creating a control panel layout.

Assignment(s)  
Market survey of the recent DCSs and comparison of their features with the DCSs available in the lab.

**Practical Module-8 Interfacing of field devices with DCS.**

**Objectives**  
To introduce students on how to Interface transmitters, limit switches, final control elements with DCS  

**Demonstration**  
1. How to Interface Level transmitter and Flow Transmitter in the Process Control Training Plant to a DCS.  
2. How to interface Limit Switches, Pumps and Control valves in the Process Control Training Plant to a DCS.

**Experiment(s)**  
1. Interfacing Temperature Transmitter and Variable Speed Pump to a DCS  
2. Configuration of face plates, creation of logs and trend displays

**Assignment(s)**  
1. Interfacing Temperature Transmitter and Heater and Variable Speed Pump with Pump Controller to a DCS.

**Practical Module-9. Realization of control schemes for typical processes using DCS.**

**Objective**  
To introduce students on how to configure PID control block to achieve closed loop control.

**Demonstration**  
Configuration of PID Function Block and PID Faceplate.

**Experiment**  
On-line Monitoring and Control of Level Process using Distributed Control System.

**Assignment(s)**  
1. On-line Monitoring and Control of Process such as Flow, Temperature and Pressure, using Distributed Control System.

**Practical Module-10 Interfacing smart field devices with DCS.**

**Objective**  
To introduce students on how to Interface smart field devices (HART/Foundation Field bus) with DCS.

**Demonstration**  
Demonstration of ‘PID control’ in field devices.

**Experiment(s)**  
Design and Implementation of Feedback control scheme (FF-PID) for the level process using DCS.

**Assignment(s)**  
Market survey: Industrial Data Networks

**Practical Module – 11 Interfacing Wireless (Wireless HART) Transmitter to a DCS.**

**Objective(s)**  
To introduce students on how to Interface Wireless transmitters and
how to configure HART communicator.

**Demonstration**
How to Interface Wireless field devices to a DCS?

**Experiment(s)**
Interfacing Wireless HART enabled Transmitters to a DCS.

**Assignment(s)**
Comparison of Wireless HART and ISA 100.11a Communication Protocols.

**Practical Module - 12 IoT based monitoring of Level/Flow process.**

**Objective(s)**
Introduction to IoT based monitoring.

**Demonstration**
Configuration of IoT gateway.

**Experiment(s)**
1. Interfacing transmitters to DCS through IoT gateway.
2. Cloud based Monitoring of level/flow process.

**Assignment(s)**
Cloud based Monitoring of temperature process.

TOTAL : 90 PERIODS

**COURSE OUTCOMES**

1. Ability to understand all the important components such as PLC, SCADA, DCS, I/O modules and field devices of an industrial automation system.
2. Ability to develop PLC program in different languages for industrial applications.
3. Gain hands on experience in interfacing transmitters and final control elements with PLC and DCS.
4. Be able to Configure and develop Feedback Control Schemes using PLC and DCS.
5. Able to select and use most appropriate automation technologies for a given application.
6. Able to configure IoT gateway for any industrial process using DCS.
7. Able to interface smart filed devices(HART /FF enabled field devices)with DCS and gain knowledge on the recent developments in industrial data networks.

IN5212  ADVANCED PROCESS CONTROL LABORATORY  L  T  P  C
0  0  4  2

COURSE OBJECTIVES

To impart Theoretical and Practical Skills on

- Linear/Non-Linear Process Identification
- State and Parameter Estimation
- Fractional Order PID / Robust PID Controller
- Design of Soft – Sensors
- Dynamic Matrix Control / Optimal Control Scheme

List of Experiments

1. Identification and validation of Linear Dynamic model (Black Box) of a Process using Non-Parametric Methods.

2. Identification and validation of Linear Dynamic model (Black Box) of a Process using Parametric Methods.

3. Identification and Validation of a Grey-box model of a Temperature Process

4. Estimation of State Variables of a series RLC circuit using Kalman Filter

5. Estimation of Parameters of a ARX model using Recursive Least Squares Algorithm

6. Design and Implementation of a soft-sensor using Multi-Variate Statistical Methods

11. Design and Implementation Optimal Control Schemes (Fuel/Energy/Time) on the simulated model of a system.

12. Identification of a Non-Linear Dynamic model (Black Box) of a Process using Machine Learning Algorithms

TOTAL : 60 PERIODS

COURSE OUTCOMES

1. Ability to identify parametric and non-parametric models for linear systems
2. Ability to estimate model parameters and state variables using suitable algorithms
3. Ability to develop soft sensors using multivariate statistical methods.
4. Ability to design advanced control schemes such as Robust, Adaptive, Optimal and Fractional order
6. Ability to recommend a suitable control scheme for given application

COURSE OBJECTIVES
- To make the students understand the concept of estimating the state variables of a system using state estimation algorithms.
- To introduce the concept of estimating the parameters of the selected models using parameter estimation algorithm.
- To make the student understand the principles of closed loop identification.
- To make the students understand the use of ANN, Fuzzy Logic, ANFIS for modeling of non-linear system and to get familiarized with the ANN and Fuzzy Logic tool boxes.
- To provide the background on the practical aspects of conducting experiments for real time system identification.

UNIT I KALMAN UPDATE BASED FILTERS & PARTICLE FILTER

UNIT II PARAMETER ESTIMATION METHODS

UNIT III CLOSED-LOOP IDENTIFICATION

UNIT IV NONLINEAR SYSTEM IDENTIFICATION
- Modeling of non linear systems using ANN- NARX,NNSS,NARMAX - Generation of training data – Training Feed-forward and Recurrent Neural Networks – Adaptive Neuro-Fuzzy Inference System(ANFIS) - Introduction to Support Vector Regression.

UNIT V PRACTICAL ASPECTS OF IDENTIFICATION
- Practical aspects:- input design for identification, notion for persistent excitation, drifts and detrending – outliers and missing data – pre-filtering - robustness – Model validation and Model structure determination- Case studies.

COURSE OUTCOMES
1. Ability to design and implement state estimation schemes.
2. Ability to develop various models (Linear & Nonlinear) from the experimental data.
3. Ability to select a suitable model and parameter estimation algorithm for the identification of systems.
4. Ability to carry out the verification and validation of identified model.
5. Will gain expertise on using the model for prediction and simulation purposes and for developing suitable control schemes.

IN5002  LINEAR AND NONLINEAR SYSTEMS THEORY  L  T  P  C
                                                                 3  0  0  3

COURSE OBJECTIVES
- To impart the skills needed to represent the system in state space form
- To impart knowledge required to design state feedback controller and state observers
- To impart knowledge and skills needed to classify singular points and construct phase trajectory using delta and isocline methods.
- To make the students understand the concepts of stability and introduce techniques to assess the stability of certain class of non-linear system using describing function, Lyapunov Stability, Popov's Stability Criterion and Circle Criterion
- To make the students understand the various non-linear behaviors such as Limit cycles, input multiplicity and output multiplicity, Bifurcation and Chaos.

UNIT I  STATE SPACE APPROACH  9

UNIT II  STATE FEEDBACK CONTROL AND STATE ESTIMATOR  9
Controllability and Observability – Stabilizability and Detectability - Kalman Decomposition - State Feedback Control – Pole placement technique – Full order and Reduced Order Observers

UNIT III  NON-LINEAR SYSTEMS  9

UNIT IV  STABILITY OF NON-LINEAR SYSTEMS  9

UNIT V  NON-LINEAR SYSTEMS ANALYSIS  9

TOTAL : 45 PERIODS

COURSE OUTCOMES
1. Ability to represent the time-invariant systems in state space form as well as analyze, Whether the system is stabilizable, controllable, observable and detectable.
2. Ability to design state feedback controller and state observers
3. Ability to classify singular points and construct phase trajectory using delta and isocline methods.
4. Ability to use the techniques such as describing function, Lyapunov Stability, Popov’s Stability Criterion and Circle Criterion to assess the stability of certain class of non-linear system.
5. Ability to describe non-linear behaviors such as Limit cycles, input multiplicity and output multiplicity, Bifurcation and Chaos.
6. Ability to identify the different types of non-linearity existing in the system.

COURSE OBJECTIVES

- To provide an overview of the Industrial data communications systems.
- To provide a fundamental understanding of common principles, various standards, protocols.
- To provide insight into some of the new principles those are evolving for future networks.

UNIT I DATA NETWORK FUNDAMENTALS

UNIT II MODBUS AND HART
Evolution of industrial data communication standards - MODBUS:- Protocol structure, Function codes - HART communication protocol, Communication modes, HART Networks, HART commands, HART applications & Troubleshooting

UNIT III PROFIBUS AND FF

UNIT IV AS – INTERFACE (AS-i), DEVICENET AND INDUSTRIAL ETHERNET
Industrial Ethernet: Introduction – 10Mbps Ethernet – 100Mbps Ethernet- Gigabit Ethernet

UNIT V WIRELESS COMMUNICATION

COURSE OUTCOMES(COs)

- Differentiate various types of industrial data network standards and the associated protocols based on their specifications and applications.
- Analyze the various characteristics of each layer of the protocol stack pertaining to different Industrial data network standards
- Compare the performance of the standards and infer the advantages and drawbacks of each for a given industrial application
- Select and use the most appropriate networking technologies and standards for a given application.
- Identify procedures for fault-free operations in the data communications links
- Infer the requirements of an industry and select a wired or wireless solution for installing Industrial data network

COURSE OBJECTIVES
To introduce students the basic concepts of
- Experimental Design
- Linear Regression Analysis
- Linear Model Selection and Regularization
- Classification
- Process Identification, Performance Monitoring and Soft Sensor Design.

UNIT I  INTRODUCTION

UNIT II  REGRESSION
Linear Regression:- Simple Linear Regression, Multiple Linear Regression -K-nearest neighbors regression – Practical Consideration in the Regression Model - Validation methods to assess model quality:- The validation set approach, Leave-One-Out Cross Validation, k-Fold Cross Validation – Bias-variance Trade-off for k-Fold Cross Validation.

UNIT III  LINEAR MODEL SELECTION & REGULARIZATION

UNIT IV  SUPERVISED LEARNING WITH REGRESSION AND CLASSIFICATION TECHNIQUES

UNIT V  APPLICATIONS
Process data analysis for system identification (under open and closed loops) - Controller Performance Monitoring - Principal components analysis (PCA) for Process Monitoring and Partial Least Squares (PLS) for soft-sensor design - Data-based causality analysis for identification of process topology.

TOTAL : 45 PERIODS

COURSE OUTCOMES (COs)
1. Be able to apply Design of Experiments for Problem solving and Process Troubleshooting
2. Be able to select the right choice of regression method for a given application.
3. Be able to select the right choice of classification method for a given application.
4. Be able to systematically carryout System Identification, Process & Performance Monitoring.
5. Be able to cohesively analyze alarm data, process data and process connectivity information
6. Ability to carry out data driven analysis and process modeling.

IN5005 OPIMAL CONTROL

COURSE OBJECTIVES

- To provide an exposure to different type of optimal control problems such as time-optimal, fuel optimal, energy optimal control problems
- To impart knowledge and skills needed to design Linear Quadratic Regulator for Time-invariant and Time-varying Linear system (Continuous time and Discrete-time systems)
- To introduce concepts needed to design optimal controller using Dynamic Programming Approach and H-J-B equation.
- To provide an exposure to various types of fault tolerant control schemes such as Passive and active approaches
- To introduce concepts needed to design optimal controller in the presence of state constraints and time optimal controller

UNIT I CALCULUS OF VARIATIONS AND OPTIMAL CONTROL

UNIT II LINEAR QUADRATIC OPTIMAL CONTROL SYSTEM

Problem formulation – Finite time Linear Quadratic regulator – Infinite time LQR system: Time Varying case- Time-invariant case – Stability issues of Time-invariant regulator – Linear Quadratic Tracking system: Fine time case and Infinite time case

UNIT III DISCRETE TIME OPTIMAL CONTROL SYSTEMS

Variational calculus for Discrete time systems – Discrete time optimal control systems:- Fixed-final state and open-loop optimal control and Free-final state and open-loop optimal control - Discrete time linear state regulator system – Steady state regulator system

UNIT IV PONTRYAGIN MINIMUM PRINCIPLE

UNIT V CONSTRAINED OPTIMAL CONTROL SYSTEMS

TOTAL : 45 PERIODS

COURSE OUTCOMES

1. Ability to explain different type of optimal control problems such as time-optimal, fuel optimal, energy optimal control problems
2. Ability to design Linear Quadratic Regulator for Time-invariant and Time-varying Linear system (Continuous time and Discrete-time systems)
3. Ability to design optimal controller using Dynamic Programming Approach and H-J-B equation.
4. Ability to Explain the Pontryagin Minimum Principle.
5. Ability to design optimal controller in the presence of state constraints and time optimal controller.

COURSE OBJECTIVES

- To impart knowledge on how to recursively estimate the parameters of discrete input – output models using recursive parameter estimation methods
- To make the student understand the principles of STR, MRAC and Gain scheduling.
- To make the student design simple adaptive controllers for linear systems using STR, MRAC and Gain scheduling

UNIT I INTRODUCTION

UNIT II GAIN SCHEDULING
Introduction- The principle - Design of gain scheduling controllers- Nonlinear transformations - application of gain scheduling - Auto-tuning techniques: Methods based on Relay feedback

UNIT III DETERMINISTIC SELF-TUNING REGULATORS
Introduction- Pole Placement design - Indirect Self-tuning regulators - direct self-tuning regulators – Disturbances with known characteristics

UNIT IV STOCHASTIC AND PREDICTIVE SELF-TUNING REGULATORS

UNIT V MODEL – REFERENCE ADAPTIVE SYSTEM

TOTAL : 45 PERIODS

COURSE OUTCOMES

1. Ability to understand and apply the estimation algorithm to estimate the parameters of the process.
2. Ability to understand the basic concepts to master the techniques of adaptive control.
3. Ability to use appropriate software tools for design of adaptive controllers and analysis of the process.
4. Ability to identify, formulate, analyze engineering problems and carry out research by designing suitable adaptive schemes for complex instrumentation problem.
5. Ability to apply the concepts to design adaptive control for multidisciplinary problem.
6. Ability to make use of the techniques for self and lifelong learning to keep in pace with the new technology.

COURSE OBJECTIVES

- To review the properties of linear systems in terms of robust stability and performance
- To introduce the skills required to formulate Robust Control Problem based on Robust stability and Robust performance
- To develop the skills needed to design \( H_2 \) optimal controller to achieve the desired performance
- To develop the skills needed to design H-infinity sub-optimal controllers by means of Riccati equations
- To develop the skills needed to design H-infinity sub-optimal controllers by means of LMI Approach

UNIT I INTRODUCTION

UNIT II \( H_2 \) OPTIMAL CONTROL
Linear Quadratic Controllers – Characterization of \( H_2 \) optimal controllers – Kalman Bucy Filter – LQG Controller

UNIT III H-INFINITY OPTIMAL CONTROL-RICCATI APPROACH
Formulation – Characterization of H-infinity sub-optimal controllers by means of Riccati equations – H-infinity control with full information – Mixed Sensitivity design

UNIT IV H-INFINITY OPTIMAL CONTROL- LMI APPROACH

UNIT V SYNTHESIS OF ROBUST CONTROLLERS & CASE STUDIES
Synthesis of Robust Controllers – Small Gain Theorem – D-K –iteration- Control of Inverted Pendulum- Control of CSTR – Control of Aircraft – Robust Control of Second-order Plant- Robust Control of Distillation Column

TOTAL : 45 PERIODS

COURSE OUTCOMES
1. Ability to define and enumerate properties of linear systems in terms of robust stability and performance
2. Ability to formulate Robust Control Problem based on Robust stability and Robust performance.
3. Ability to design \( H_2 \) optimal controller to achieve the desired performance
4. Ability to design H-infinity sub-optimal controllers by means of Riccati equations
5. Ability to design H-infinity sub-optimal controllers by means of LMI approach
6. Ability to design Robust controller by means of synthesis approach.

COURSE OBJECTIVES

- To give an overview of different Fault Detection and Diagnosis methods.
- To present an overview of various types of fault detection schemes using Limit Checking, Parameter estimation methods, Principle Component Analysis.
- To impart knowledge and skills needed to design and detect sensor and actuators faults using structured residual approach as well as directional structured residual approach.
- To impart knowledge and skills needed design and detect faults in sensor and actuators using GLR and MLR based Approaches.
- To impart knowledge and skills needed to detect and quantify and compensate stiction in Control valves.

UNIT I    INTRODUCTION & ANALYTICAL REDUNDANCY CONCEPTS

UNIT II     FAULT DETECTION AND DIAGNOSIS USING LIMIT CHECKING AND PROCESS IDENTIFICATION METHODS

UNIT III  FAULT DETECTION AND DIAGNOSIS USING PARITY EQUATIONS

UNIT IV     FAULT DIAGNOSIS USING STATE ESTIMATORS

UNIT V     CASE STUDIES

TOTAL : 45 PERIODS

COURSE OUTCOMES (COs)

1. Ability to explain different approaches to Fault Detection and Diagnosis.
3. Ability to design and detect sensor and actuators faults using structured residual approach as well as directional structured residual approach.
4. Ability to design and detect faults in sensor and actuators using GLR and MLR based Approaches.
5. Ability to detect and quantify and compensate stiction in Control valves.
6. Ability to take up industrial problem, detect and diagnose the fault.

COURSE OBJECTIVES

- To give an overview on fundamental aspects of motor-load systems and basic characteristics of dc and ac drives.
- To introduce various modeling methods of dc and ac drives.
- To give detailed knowledge on operation, analysis and control of converter and chopper driven dc drives.
- To give exposure to principle, techniques of conventional control of ac drives.
- To introduce advanced control strategies of ac drives and latest developments in the field of control of electric drives.

UNIT I INTRODUCTION TO ELECTRIC DRIVES 9
Motor-Load system–Dynamics, load torque, steady state stability, Multi quadrant operations of drives. DC motors- speed reversal, speed control and breaking techniques, Characteristics of Induction motor and Synchronous motors-Dynamic and regenerative braking ac drives.

UNIT II MODELING OF DC AND AC MACHINES 9
Circuit model of Electric Machines-Transfer function and State space models of series and separately excited DC motor-AC Machines –Dynamic modeling –linear transformations-equations in stator, rotor and synchronously rotating reference frames-flux linkage equations-Dynamic state space model-modeling of Synchronous motor

UNIT III CONTROL OF DC DRIVES 9
Analysis of series and separately excited DC motor with single phase and Three phase converters operating in different modes and configurations- Analysis of series and separately excited DC motor fed from different choppers, two quadrant and four quadrant operation-Closed loop control of dc drives-Design of controllers

UNIT IV CONTROL OF AC DRIVES 9
Operation of induction motor with non-sinusoidal supply waveforms, Variable frequency operation of 3-phase inductions motors, constant flux operation, current fed operations, Constant torque operations, Static rotor resistance control and slip power recovery scheme –Synchronous motor control, control of stepped motors, Parameter sensitivity of ac drives.

UNIT V ADVANCED CONTROL OF AC DRIVES 9
Principles of vector control –Direct and indirect vector control of induction motor –DTC- sensor less vector control-speed estimation methods-Applications of Fuzzy logic and Artificial Neural Network for the control of AC drives.

TOTAL : 45 PERIODS

COURSE OUTCOMES

1. Get a thorough understanding of motor-load system dynamics and stability, modern drive system objectives and fundamentals of dc and ac motors.
2. Will have the ability to model both dc and ac motors in various conventional methods.
3. Confidently design and analyze both the converter and chopper driven dc drives.
4. Ability to understand the conventional control techniques of ac drives and will have the ability to design and analyze such system.
5. Get a detailed knowledge on advanced high performance control strategies for ac drives and emerging technologies in electric drives.
6. Will have a comprehensive exposure to emerging technologies like AI in the field of electric drives.

COURSE OBJECTIVES

- To introduce the image fundamentals and transforms
- To impart knowledge in image enhancement
- To give exposure to image restoration and image compression
- To familiarize the students on image analysis
- To make the students to understand the concept of pattern recognition

UNIT I DIGITAL IMAGE FUNDAMENTALS AND TRANSFORMS

Elements of Digital image processing systems - Digital image representation - visual perception - Sampling, Quantization, Image basis function - Two dimensional DFT - Discrete cosine transform - Walsh-Hadamard transform - Wavelet transform - Principal Component Analysis, Color image Processing.

UNIT II IMAGE PREPROCESSING AND ENHANCEMENT

UNIT III IMAGE RESTORATION AND COMPRESSION

UNIT IV IMAGE SEGMENTATION AND ANALYSIS

Boundary detection based techniques, Point, line detection, Edge detection, Edge linking, local processing, regional processing, Hough transform, Thresholding methods, Moving averages, Multivariable thresholding, Region-based segmentation, Watershed algorithm.

UNIT V APPLICATIONS OF IMAGE PROCESSING

Recognition based on Decision Theoretic methods - Structural Recognition - Linear Discriminant Analysis - Optimization Techniques in Recognition - Applications in particle size measurement - Flow measurement - Food processing - Case studies.

TOTAL : 45 PERIODS

COURSE OUTCOMES

1. Ability to understand the technical terms associated with image and video processing.
2. Ability to select the appropriate preprocessing techniques for manipulation of images
3. Ability to utilize the different approaches of image enhancement, segmentation and analysis techniques
4. Ability to apply image processing techniques in both the spatial and frequency domains.
5. Ability to use appropriate software tools (Example: Matlab, Open CV and Python) for image and video processing
6. Ability to apply the imaging techniques to various applications.

IN5011  INDUSTRIAL Internet of Things  L  T  P  C
3  0  0  3

COURSE OBJECTIVES
- To give an overview of the Interconnection and Integration of the Physical World with Cyber Space.
- To provide an insight into Design and Development of IOT application.

UNIT I INTERNET PRINCIPLES  9
Definition and Characteristics - IoT enabling technologies – Levels of deployment – Domain specific IoTs - SDN and NFV for IoT – ISO/OSI model – MAC address and IP address - Overview of TCP/IP and UDP - Basics of DNS - Classes of IP addresses - Static and dynamic addressing – Salient features of IPV4 – Specifications of IPV6 and 6LoPAN.

UNIT II PHYSICAL AND LOGICAL DESIGN METHODOLOGIES  9

UNIT III PROTOCOLS AND CLOUDS FOR IOT  9
Application layer protocols for IoT – MQTT and – Introduction to cloud storage models and communication APIs – Web application framework – Designing a web API – Web services - IoT device management

UNIT IV INDUSTRIAL IOT AND SECURITY  9

UNIT V PROCESS DATA ANALYTICS  9

TOTAL : 45 PERIODS

COURSE OUTCOMES:
1. Apply the knowledge of Internet principles and protocols to understand the architecture and specifications of a given network
2. Design simple IoT applications using prototyping boards
3. Select the appropriate protocol for a specific network implementation
4. Identify the security level needed for a particular industrial IOT application
5. Analyze the process data using cloud based process data management tools
6. Acquire insight regarding the technological challenges and opportunities in Industrial IoT design and implementation

COURSE OBJECTIVES

- To make the students aware of basic concepts of safety instrumented system, standards and risk analysis techniques.
- To make the students understand different layers of protection.
- To make students conscious about safety instrumentation applications.

UNIT I INTRODUCTION

UNIT II PROTECTION LAYERS AND SAFETY REQUIREMENT SPECIFICATIONS

UNIT III SAFETY INTEGRITY LEVEL (SIL)
Evaluating Risk, Safety Integrity Levels, SIL Determination Method : As Low As Reasonably Practical (ALARP), Risk matrix, Risk Graph, Layers Of Protection Analysis (LOPA) – Issues related to system size and complexity – Issues related to field device safety – Functional Testing.

UNIT IV SYSTEM EVALUATION

UNIT V CASE STUDY

COURSE OUTCOMES (COs)
1. Ability to understand Non-SIS layers of protection and the need for SIS in process industries.
2. Ability to state the associated SIS standards.
3. Ability to implement hazard analysis & risk assessment to identify process hazards & risks.
4. Ability to determine the target SIL & safety requirements specifications
5. Ability to develop detailed SIS design, installation & operation.
6. Ability to implement SIS analysis & design for a furnace/ fired heater system.

COURSE OBJECTIVES

To impart basic knowledge on Instrumentation standards, principles and its behavior.

UNIT I STANDARDS ORGANIZATION

Standards: Introduction International and National Standards organization: IEC, ISO, NIST, IEEE, ISA, API, BIS, DIN, JISC and ANSI.

UNIT II ISA STANDARDS

UNIT II ISA STANDARDS - CONTROL VALVE AND ACTUATOR

Control Valve Standards (ISA75): 75.01, 75.04, 75.05, 75.7, 75.11, 75.13, 75.14, 75.23, 75.24, 75.26. Valve Actuator (ISA 96): 96.01, 96.02, 96.03, 96.04.

UNIT IV ISA STANDARDS - FOSSIL AND NUCLEAR POWER PLANTS

Fossil Power Plant Standards (ISA77): 77.14, 77.22, 77.30, 77.41, 77.42, 77.44, 77.60, 77.70. Nuclear Power Plant Standards (ISA67): 67.01, 67.02, 67.03, 67.04, 67.06.

UNIT V BS, ISO, IEC, & ANSI

TOTAL : 45 PERIODS

COURSE OUTCOMES (COs)

1. Understand the role of standards organization
2. Ability to implement different standards related to installation and control system, programming, documentation, equipments in hazardous area and instrument specification forms.
3. Skill to utilise standards related to control valve, actuators. orifice sizing, RTD and thermocouple
4. Capability to implement standards related to power plant and nuclear power plant.
5. Ability to select different standards related to orifice ,RTD and thermocouple.
6. Select standards related to programming language.

TEXT BOOKS:

3. ISA standard 5, “Documentation of Measurement and Control Instruments and Systems”, ISA, North Carolina, USA.
4. ISA standard 12, “Electrical Equipment for Hazardous Locations”, ISA, North Carolina, USA.
5. ISA standard 20, “Instrument Specification Forms”, ISA, North Carolina, USA.

COURSE OBJECTIVES

- To understand the nature of continuous and discrete systems
- To develop synchronous and asynchronous model of processes
- To specify both safety and liveness requirements in temporal logic and to debug the correctness of the protocol using model checking
- To develop and analyse model of timed and hybrid systems

UNIT I INTRODUCTION
Introduction-key features of cyber physical systems- Continuous dynamics: Newtonian mechanics-actor models-properties of systems-feedback control-Discrete dynamics: Discrete systems- Finite state machines.

UNIT II SYNCHRONOUS AND ASYNCHRONOUS MODEL
Synchronous model: Reactive components-properties of components-composing components-synchronous design, Asynchronous model- asynchronous processes- asynchronous design primitives- coordination protocols.

UNIT III SAFETY AND LIVENESS REQUIREMENT
Safety specifications- verifying invariants- Enumerative search- Temporal logic- Model checking- reachability analysis- proving live-ness

UNIT IV TIMED MODEL AND REAL-TIME SCHEDULING

UNIT V HYBRID SYSTEMS

TOTAL : 45 PERIODS

COURSE OUTCOMES:
1. Ability to apply mathematical knowledge and basis of science and engineering to develop model for continuous and discrete systems.
2. Ability to develop synchronous and asynchronous models
3. Ability to assess the safety requirements of the cyber physical systems
4. Ability to apply automata for modeling timed systems
5. Ability to analyze the stability of hybrid systems

IN5015 CYBER SECURITY FOR INDUSTRIAL AUTOMATION

COURSE OBJECTIVES

- To understand the Industrial security environment and cyber attacks
- To analyze and assess risks in the industrial environment
- To access, design and implement cyber security
- To test and troubleshoot the industrial network security system

UNIT I INTRODUCTION

Industrial security environment-Industrial automation and control system (IACS) culture Vs IT Paradigms- Cyberattacks: Threat sources and steps to successful cyber attacks.

UNIT II RISK ANALYSIS

Risk identification, classification and assessment, Addressing risk: Cyber security Management System (CSMS), organizational security, physical and environmental security, network segmentation, access control, risk management and implementation.
UNIT III ACCESSING THE CYBERSECURITY OF IACS

UNIT IV CYBERSECURITY DESIGN AND IMPLEMENTATION

Cyber security lifecycle - conceptual design process - detailed design process - firewall design - remote access design - intrusion detection design.

UNIT V TESTING AND MAINTENANCE

Developing test plans - cyber security factory acceptance testing - site acceptance testing - network and application diagnostics and troubleshooting - cyber security audit procedure - IACS incident response.

TOTAL : 45 PERIODS

COURSE OUTCOMES:
1. Ability to apply basis of science and engineering to understand Industrial security environment and cyberattacks.
2. Ability to analyze and assess risks in the industrial environment.
3. Ability to access the cybersecurity of IACS.
4. Ability to design and implement cybersecurity.
5. Ability to test and troubleshoot the industrial network security system.

COURSE OBJECTIVES

- To know the basic terminologies, classification of robot and configurations of serial manipulator.
- To understand the mechanical design and kinematics of serial manipulator.
- To learn the robot programming and safety consideration of industrial manipulator.
- To understand the concepts and stabilization of legged and wheeled mobile robots.
- To demonstrate the robots in various applications.

UNIT I  INTRODUCTION TO SERIAL MANIPULATORS  9

UNIT II  MECHANICAL DESIGN OF ROBOT SYSTEM  11

UNIT III  ROBOT PROGRAMMING & ROBOTIC WORK CELLS  9

UNIT IV  MOBILE ROBOTICS  8

UNIT V  APPLICATIONS OF ROBOTS  8

TOTAL: 45 PERIODS

COURSE OUTCOMES

Upon completion of this course, the students will be able to:

- **CO1**: Classify the various configurations of serial manipulators.
- **CO2**: Develop the kinematics solution of serial manipulator.
- **CO3**: Find the differences of robot programming languages and safety consideration of industrial manipulator.
- **CO4**: Develop the legged and wheeled mobile robots.
- **CO5**: Demonstrate the robots in various applications.

MR5251 MECHATRONICS SYSTEM DESIGN L T P C
3 0 2 4

COURSE OBJECTIVES
- To enlist the various elements required to design and integrate the mechatronic systems.
- To acquire the Modelling skill to capture the system dynamics of hybrid systems and to familiar the system identification techniques and to practice the design and assembly of mechanical system in software environment for integrating various system sub-elements.
- To familiar the standard simulation procedure for algorithm and controller development and to practice simulate and verify interactions and functions of integrated systems and its elements for fine tuning the design and control for real time system development.
- To apply the optimization procedure for the appropriate selection of mechatronic system elements and process parameter optimization.
- To understand, apply, analyze and evaluate the functions of systems models for integrating the virtual elements of mechatronics.

UNIT I ELEMENTS OF MECHATRONICS 8

UNIT II MODELLING & SYSTEM IDENTIFICATION 9
UNIT III SIMULATION

UNIT IV DESIGN OPTIMIZATION

UNIT V CASE STUDIES ON MODELING OF MECHATRONIC SYSTEMS

LECTURE: 45 PERIODS

COURSE OUTCOMES
Upon completion of this course, the students will be able to:

CO1: Identify the list of elements required integrate the entire mechatronic systems developments.
CO2: Model the system dynamics of hybrid systems and to trial the system identification techniques and to practice the design, integration and simulation in virtual systems that are closer to the real time systems’ functionalities and its parameters.
CO3: Follow standard simulation procedure for algorithm and controller development.
CO4: Use the optimization concepts mechatronics elements selection and process parameter optimization.
CO5: Integrate and analyze the mechatronics system design virtually and able to fine tune the system design and control algorithms in the software-in-loops before real time development.

LIST OF EXPERIMENTS

1. Modelling and Simulation of Vehicle and its Automotive Sub System.
2. Modelling and Simulation of 6 DOF Serial Manipulators.
3. Modelling and Simulation of Parallel Manipulator.
5. Modelling and Simulation of Mobile Robot.

PRACTICAL: 30 PERIODS
TOTAL: 75 PERIODS

MR5151 DRIVES AND ACTUATORS FOR AUTOMATION

COURSE OBJECTIVES

- To recognize the standard symbols and to understand the functions of basic fluid power generation and actuation elements.
- To realize the functions of fluid regulation and control elements and its typical uses in fluid power circuit and to acquire the practice on assembling the various types of pneumatic circuits.
- To familiar and exercise the design procedure of various types pneumatic and hydraulic fluid power circuits and to provide a training to create the various types of hydraulic circuits.
- To understand the typical functions and selections of various types electrical actuators and to provide the hands on training to the use of various electrical motors for automatic control.
- To apprehend the utilities of mechanical and power electronic drives for various functional requirements of actuators and control valves.

UNIT I FLUID POWER SYSTEM GENERATION AND ACTUATORS 9

UNIT II CONTROL AND REGULATING ELEMENTS 8

UNIT III CIRCUIT DESIGN FOR HYDRAULIC AND PNEUMATICS 10
Typical Design Methods – Sequencing Circuits Design - Combinational Logic Circuit Design - Cascade Method – KV Mapping - Electrical Control of Pneumatic and Hydraulic Circuits - Use of Relays, Timers, Counters, Programmable Logic Control of Hydraulics - Pneumatics Circuits - PLC Ladder Programming

UNIT IV ELECTRICAL ACTUATORS 9
UNIT V ELECTRICAL DRIVE CIRCUITS

LECTURE = 45 PERIODS

COURSE OUTCOMES

Upon completion of this course, the students will be able to:

CO1: Use the appropriate fluid power generation and actuation elements and fluid power symbols to design and integrate the pneumatic and hydraulic systems.

CO2: Select and design the basic fluid power circuits using control valves and regulating elements for various types’ of actuation and breaking.

CO3: Analyze and design the complex sequences of cylinders using advanced techniques for manual and automatic control.

CO4: Identify and select the appropriate electrical actuators for typical applications of system development.

CO5: Analyze the need of appropriate drive and its functions for various actuator and valve control in mechatronic system development.

LABORATORY

LIST OF EXPERIMENTS

FLUID POWER DRIVES

1. Experimental Verification of Speed Control Circuits in Pneumatic and Hydraulic Trainer.
2. Experimental Verification of Single and Double Acting Cylinder Circuits Using Different Directional Control Values.
3. Experimental Verification of Electro-Pneumatic Circuits.
4. Experimental Verification of Pneumatic Sequencing Circuits.
5. Experimental Verification of Logic, Metre-in and Metre-out Pneumatic Circuits.
7. Experiments on Control of PLC Based Electro Pneumatic Sequencing Circuits.
8. Experiments on Control of PLC Based Electro Hydraulic Sequencing Circuits.
ELECTRICAL DRIVES

1. Experiments on Position, Speed and Direction Control of AC and DC Motors.
2. Experiments on Position, Speed and Direction Control of Stepper Motor.
3. Experiments on Various Types of Switching and Protection Devices.

PRACTICAL = 30 PERIODS

TOTAL = 75 PERIODS

AV5151 FLIGHT INSTRUMENTATION

OBJECTIVES:

- To learn the concept of measurement, error estimation and classification of aircraft instrumentation and displays
- To study air data instruments and synchronous data transmissions systems
- To study gyroscope and its purposes, aircraft compass system and flight management system
- To study Data acquisition and handling systems
- To impart knowledge about the basic and advanced flight instruments, their construction, characteristics and their operation.

UNIT I MEASUREMENT SCIENCE AND DISPLAYS

UNIT II AIR DATA INSTRUMENTS AND SYNCHRO TRANSMISSION SYSTEMS

Air data instruments-airspeed, altitude, Vertical speed indicators, Altitude alerting systems, Machmeter, Mach Warning system, Static Air temperature, Angle of attack measurement, Stall Warning system, Synchronous data transmission system

UNIT III GYROSCOPIC AND ADVANCED FLIGHT INSTRUMENTS

Gyroscope and its properties, gyro system, Gyro horizon, Erection systems for Gyro Horizons-DIRECTION gyro-direction indicator, Rate gyro-rate of turn and slip indicator, Turn coordinator, acceleration and turning errors, Standby Attitude Director Indicator, Gyro stabilized Direction Indicating Systems, Advanced Direction Indicators, Horizontal Situation Indicator.

UNIT IV AIRCRAFT COMPASS SYSTEMS & FLIGHT MANAGEMENT SYSTEM

Direct reading compass, magnetic heading reference system-detector element, monitored gyroscope system, DGU, RMI, deviation compensator. FMS- Flight planning-flight path optimization-operational modes-4D flight management

UNIT V POWER PLANT INSTRUMENTS & FLIGHT DATA RECORDING

Pressure measurement, temperature measurement, fuel quantity measurement, engine power and control instruments-measurement of RPM, manifold pressure, torque, exhaust gas temperature, EPR, Engine Fuel Indicators, engine vibration monitoring, Cockpit Voice Recorder and Flight Data Recorder.

TOTAL: 45 PERIODS

OUTCOMES:

Students will be able to:
CO1: Design the error model and estimate the error in the aircraft instruments
CO2: Explain about the various air data systems and synchronous data transmissions systems
CO3: Apply the principle of gyroscope, DGU, RMI, FMS in 4D flight management in the Avionics
domain requirements.

CO4: Classify the different sensors and select the appropriate one for the given requirements.

CO5: Explain the operation and importance of engine instruments and flight data recorder.

AV5251 AEROSPACE GUIDANCE AND CONTROL L T P C 3 1 0 4

OBJECTIVES:
- To learn about the aircraft equations of motion and method of linearization.
- To learn about the operating principle of guidance law
- To study about the augmentation systems
- To study longitudinal stability and to design the longitudinal autopilot
- To study lateral stability and to design the lateral autopilot

UNIT I INTRODUCTION 12
Introduction to Guidance and control - Definition, Historical background – Coordinate Frame - Equations of motion – Lineraization.

UNIT II AUGMENTATION SYSTEMS 12
Need for automatic flight control systems, Stability augmentation systems, control augmentation systems, Design of Limited authority and Full Authority Augmentation systems - Gain scheduling concepts.

UNIT III LONGITUDINAL AUTOPILOT 12
Displacement Autopilot -Pitch Orientation Control system, Acceleration Control System, Glide Slope Coupler and Automatic Flare Control and Flight path stabilization, Longitudinal control law design using back stepping algorithm.

UNIT IV LATERAL AUTOPILOT 12
Damping of the Dutch Roll, Methods of Obtaining Coordination, Yaw Orientation Control system, turn compensation, Automatic lateral Beam Guidance. Introduction to Fly-by-wire flight control
systems, Lateral control law design using back stepping algorithm.

UNIT V MISSILE AND LAUNCH VEHICLE GUIDANCE

Operating principles and design of guidance laws, homing guidance laws- short range, Medium range and BVR missiles, Launch Vehicle- Introduction, Mission requirements, Implicit guidance schemes, Explicit guidance, Q guidance schemes

TOTAL: 60 PERIODS

OUTCOMES:

Students will be able to:

CO1: Explain the equations governing the aircraft dynamics and the process of linearizing them.

CO2: Define the various guidance schemes and requirements for aircrafts and missiles.

CO3: Apply the principle of stability and control augmentation systems.

CO4: Analyse the oscillatory modes and methods of suppressing them

CO5: Design the controller for lateral, longitudinal and directional control of aircrafts.

REFERENCEs:

VE5251 CMOS ANALOG IC DESIGN L T P C

OBJECTIVES:

- To learn the equivalent circuits and models of MOS circuits
- To analyze various biasing circuits
- To design and analyze various differential amplifier architectures
- To design and analyze the frequency response of various differential amplifiers
- To discuss the stability and frequency compensation of feedback amplifiers

UNIT - I SINGLE STAGE AMPLIFIERS

Review of MOS physics and equivalent circuits and models. Large and Small signal analysis CS, CG and source follower, miller effect, frequency response of CS, CG and source follower.

UNIT - II CURRENT MIRRORS
Current Sources, Basic Current Mirrors, Cascode stages for Current mirrors, Wilson Current Mirror; Widler Current Mirror Large and small signal analysis of current mirrors.

UNIT – III   MULTISTAGE DIFFERENTIAL AMPLIFIERS
Differential amplifier, Large and small signal analysis of the balanced differential amplifier, device mismatches in differential amplifier, small and large signal analysis of the differential pair with current mirror load, PSRR⁺, PSRR⁻ and CMRR of differential amplifiers, small signal analysis of telescopic amplifier, two-stage amplifier and folded cascoded amplifier.

UNIT – IV   FREQUENCY RESPONSE OF MULTISTAGE DIFFERENTIAL AMPLIFIERS
Frequency response of differential amplifier-transfer function method, Miller effect, Dominant-Pole approximation, Upper Cutoff frequency-zero-value time constant method, UGF-short circuit time constant method, frequency response of telescopic cascoded, folded cascaded and two-stage amplifiers.

UNIT – V   STABILITY AND FREQUENCY COMPENSATION OF FEEDBACK AMPLIFIERS
Properties and types of negative feedback circuits, feedback configurations, effect of loading in feedback networks, feedback circuit analysis using return ratio modelling input and output port in feedback network, the relation between gain and bandwidth in feedback amplifiers, phase margin, frequency compensation, compensation of two stage MOS amplifiers.

OUTCOMES:
On successful completion of this course, students will be able to
CO1: Analyze and design CMOS analog IC building blocks
CO2: Design the various current mirror biasing circuits
CO3: Analyze and Design the various single and multistage differential amplifier architectures
CO4: Analyze the frequency response of single and multi-stage differential amplifiers
CO5: Analyze and design various feedback amplifiers with compensation

REFERENCES:
OBJECTIVES:

- To impart knowledge to the students in the principles of operation and constructional details of various Automotive Electrical and Electronic Systems
- To understand the need for starter batteries, starter motor and alternator in the vehicle.
- To differentiate the conventional and modern vehicle architecture and the data transfer among the different electronic control unit using different communication protocols
- To list common types of sensor and actuators used in vehicles.
- To understand dash – Board Instruments, various sensors and networking in vehicles.

UNIT I BATTERY AND STARTING SYSTEMS

UNIT II CHARGING AND LIGHTING SYSTEMS

UNIT III ELECTRONIC IGNITION AND INJECTION SYSTEMS

UNIT IV ELECTRICAL SYSTEMS

Warning and alarm instruments : Brake actuation warning system, traficators, flash system, oil pressure warning system, engine over heat warning system, air pressure warning system, speed warning system, door lock indicators, neutral gear indicator, horn design, permanent magnet horn, air & music horns. Wind shield wiper. window washer, instrument wiring system and electromagnetic interference suppression, wiring circuits for instruments, electronic instruments, dash board illumination.

UNIT V MICROPROCESSOR IN AUTOMOBILES

Microprocessor And Microcomputer controlled devices in automobiles such as instrument cluster, Voice warning system, Travel information system, Keyless entry system. Environmental requirements (vibration, Temperature and EMI).

OUTCOMES:
At the end of this course the student should be able to

- Define the glossary related to vehicle electrical and electronic system
- Understand the need for starter batteries, starter motor and alternator in the vehicle.
- Differentiate the conventional and modern vehicle architecture and the data transfer among the different electronic control unit using different communication protocols
- List common types of sensor and actuators used in vehicles.
- Understand networking in vehicles.

REFERENCES:

CP5073 CLOUD COMPUTING TECHNOLOGIES

OBJECTIVES:
- To understand the concept of cloud and utility computing.
- To understand the various issues in cloud computing.
- To familiarize themselves with the lead players in cloud.
- To appreciate the emergence of cloud as the next generation computing paradigm.
- To be able to set up a private cloud.

UNIT I INTRODUCTION

UNIT II VIRTUALIZATION
Data Center Technology – Virtualization – Characteristics of Virtualized Environments - Taxonomy of Virtualization Techniques – Virtualization and Cloud Computing – Pros and Cons of Virtualization – Implementation Levels of Virtualization – Tools and Mechanisms: Xen, VMWare, Microsoft Hyper-V, KVM, Virtual Box

UNIT III CLOUD COMPUTING MECHANISM

UNIT IV HADOOP AND MAP REDUCE
Apache Hadoop – HadoopMapReduce – Hadoop Distributed File System- Hadoop I/O- Developing a MapReduce Application – MapReduce Types and Formats – MapReduce Features– Hadoop Cluster Setup – Administering Hadoop.

UNIT V SECURITY IN THE CLOUD

TOTAL: 45 +30 = 75 PERIODS

OUTCOMES:
Upon completion of the course, the student will be able to
- Articulate the main concepts, key technologies, strengths and limitations of cloud computing.
- Identify the architecture, infrastructure and delivery models of cloud computing.
- Explain the core issues of cloud computing such as security, privacy and interoperability.
- Choose the appropriate technologies, algorithms and approaches for the related issues.
• Facilitate Service Level Agreements (SLA).

REFERENCES:
OBJECTIVES:

- To understand the computational approaches to Modeling, Feature Extraction.
- To understand the need and application of Map Reduce.
- To understand the various search algorithms applicable to Big Data.
- To analyze and interpret streaming data.
- To learn how to handle large data sets in main memory.
- To learn the various clustering techniques applicable to Big Data.

UNIT I DATA MINING AND LARGE SCALE FILES

UNIT II SIMILAR ITEMS

UNIT III MINING DATA STREAMS

Stream Data Model – Sampling Data in the Stream – Filtering Streams – Counting Distance Elements in a Stream – Estimating Moments – Counting Ones in Window – Decaying Windows

UNIT IV LINK ANALYSIS AND FREQUENT ITEMSETS

UNIT V CLUSTERING

TOTAL : 45 PERIODS

OUTCOMES:

Upon completion of the course, the student will be able to

- Design algorithms by employing Map Reduce technique for solving Big Data problems.
- Identify similarities using appropriate measures.
- Point out problems associated with streaming data and handle them.
- Discuss algorithms for link analysis and frequent item set mining.
- Design solutions for problems in Big Data by suggesting appropriate clustering techniques.

OPEN ELECTIVE COURSES (OEC)

OE5091 BUSINESS DATA ANALYTICS

OBJECTIVES:
- To understand the basics of business analytics and its life cycle.
- To gain knowledge about fundamental business analytics.
- To learn modeling for uncertainty and statistical inference.
- To understand analytics using Hadoop and Map Reduce frameworks.
- To acquire insight on other analytical frameworks.

UNIT I OVERVIEW OF BUSINESS ANALYTICS

Suggested Activities:
- Case studies on applications involving business analytics.
- Converting real time decision making problems into hypothesis.
- Group discussion on entrepreneurial opportunities in Business Analytics.

Suggested Evaluation Methods:
- Assignment on business scenario and business analytical life cycle process.
- Group presentation on big data applications with societal need.
- Quiz on case studies.

UNIT II ESSENTIALS OF BUSINESS ANALYTICS

Suggested Activities:
- Solve numerical problems on basic statistics.
- Explore chart wizard in MS Excel Case using sample real time data for data visualization.
- Use R tool for data visualization.

Suggested Evaluation Methods:
- Assignment on descriptive analytics using benchmark data.
- Quiz on data visualization for univariate, bivariate data.

UNIT III MODELING UNCERTAINTY AND STATISTICAL INFERENCE

Suggested Activities:
- Solving numerical problems in sampling, probability, probability distributions and hypothesis testing.
• Converting real time decision making problems into hypothesis.

Suggested Evaluation Methods:
• Assignments on hypothesis testing.
• Group presentation on real time applications involving data sampling and hypothesis testing.
• Quizzes on topics like sampling and probability.

UNIT IV ANALYTICS USING HADOOP AND MAPREDUCE FRAMEWORK

Suggested Activities:
• Practical – Install and configure Hadoop.
• Practical – Use web based tools to monitor Hadoop setup.
• Practical – Design and develop MapReduce tasks for word count, searching involving text corpus etc.

Suggested Evaluation Methods:
• Evaluation of the practical implementations.
• Quizzes on topics like HDFS and extensions to MapReduce.

UNIT V OTHER DATA ANALYTICAL FRAMEWORKS

Overview of Application development Languages for Hadoop – PigLatin – Hive – Hive Query Language (HQL) – Introduction to Pentaho, JAQL – Introduction to Apache: Sqoop, Drill and Spark, Cloudera Impala – Introduction to NoSQL Databases – Hbase and MongoDB.

Suggested Activities:
• Practical – Installation of NoSQL database like MongoDB.
• Practical – Demonstration on Sharding in MongoDB.
• Practical – Install and run Pig
• Practical – Write PigLatin scripts to sort, group, join, project, and filter data.
• Design and develop algorithms to be executed in MapReduce involving numerical methods for analytics.

Suggested Evaluation Methods:
• Mini Project (Group) – Real time data collection, saving in NoSQL, implement analytical techniques using Map-Reduce Tasks and Result Projection.

TOTAL: 45 PERIODS

OUTCOMES:
On completion of the course, the student will be able to:
• Identify the real world business problems and model with analytical solutions.
• Solve analytical problem with relevant mathematics background knowledge.
• Convert any real world decision making problem to hypothesis and apply suitable statistical testing.
• Write and Demonstrate simple applications involving analytics using Hadoop and MapReduce
• Use open source frameworks for modeling and storing data.
• Apply suitable visualization technique using R for visualizing voluminous data.

OE5092 INDUSTRIAL SAFETY LT P C 3 0 0 3

OBJECTIVES:
- Summarize basics of industrial safety
- Describe fundamentals of maintenance engineering
- Explain wear and corrosion
- Illustrate fault tracing
- Identify preventive and periodic maintenance

UNIT I INTRODUCTION
Accident, causes, types, results and control, mechanical and electrical hazards, types, causes and preventive steps/procedure, describe salient points of factories act 1948 for health and safety, wash rooms, drinking water layouts, light, cleanliness, fire, guarding, pressure vessels, etc, Safety color codes. Fire prevention and firefighting, equipment and methods.

UNIT II FUNDAMENTALS OF MAINTENANCE ENGINEERING
Definition and aim of maintenance engineering, Primary and secondary functions and responsibility of maintenance department, Types of maintenance, Types and applications of tools used for maintenance, Maintenance cost & its relation with replacement economy, Service life of equipment.

UNIT III WEAR AND CORROSION AND THEIR PREVENTION

UNIT IV FAULT TRACING
Fault tracing-concept and importance, decision tree concept, need and applications, sequence of fault finding activities, show as decision tree, draw decision tree for problems in machine tools, hydraulic, pneumatic, automotive, thermal and electrical equipment’s like, i. Any one machine tool, ii. Pump iii.
UNIT V PERIODIC AND PREVENTIVE MAINTENANCE

Periodic inspection-concept and need, degreasing, cleaning and repairing schemes, overhauling of mechanical components, overhauling of electrical motor, common troubles and remedies of electric motor, repair complexities and its use, definition, need, steps and advantages of preventive maintenance. Steps/procedure for periodic and preventive maintenance of: I. Machine tools, ii. Pumps, iii. Air compressors, iv. Diesel generating (DG) sets, Program and schedule of preventive maintenance of mechanical and electrical equipment, advantages of preventive maintenance. Repair cycle concept and importance

OUTCOMES:

CO1: Ability to summarize basics of industrial safety
CO2: Ability to describe fundamentals of maintenance engineering
CO3: Ability to explain wear and corrosion
CO4: Ability to illustrate fault tracing
CO5: Ability to identify preventive and periodic maintenance

REFERENCES:

OBJECTIVES:

- Solve linear programming problem and solve using graphical method.
- Solve LPP using simplex method
- Solve transportation, assignment problems
- Solve project management problems
- Solve scheduling problems

UNIT I LINEAR PROGRAMMING

Introduction to Operations Research – assumptions of linear programming problems - Formulations of linear programming problem – Graphical method

UNIT II ADVANCES IN LINEAR PROGRAMMING

Solutions to LPP using simplex algorithm- Revised simplex method - primal dual relationships – Dual simplex algorithm - Sensitivity analysis

UNIT III NETWORK ANALYSIS – I
Transportation problems - Northwest corner rule, least cost method, Voges’s approximation method - Assignment problem - Hungarian algorithm

UNIT IV  
NETWORK ANALYSIS – II  
Shortest path problem: Dijkstra’s algorithms, Floyd’s algorithm, systematic method - CPM/PERT

UNIT V  
NETWORK ANALYSIS – III  
Scheduling and sequencing - single server and multiple server models - deterministic inventory models - Probabilistic inventory control models

TOTAL: 45 PERIODS

OUTCOMES:
CO1: To formulate linear programming problem and solve using graphical method.
CO2: To solve LPP using simplex method
CO3: To formulate and solve transportation, assignment problems
CO4: To solve project management problems
CO5: To solve scheduling problems

OE5094  
COST MANAGEMENT OF ENGINEERING PROJECTS  
L T P C  
3 0 0 3

OBJECTIVES:
- Summarize the costing concepts and their role in decision making
- Infer the project management concepts and their various aspects in selection
- Interpret costing concepts with project execution
- Develop knowledge of costing techniques in service sector and various budgetary control techniques
- Illustrate with quantitative techniques in cost management

UNIT I  
INTRODUCTION TO COSTING CONCEPTS  
Objectives of a Costing System; Cost concepts in decision-making; Relevant cost, Differential cost, Incremental cost and Opportunity cost; Creation of a Database for operational control.

UNIT II  
INTRODUCTION TO PROJECT MANAGEMENT  
Project: meaning, Different types, why to manage, cost overruns centres, various stages of project execution: conception to commissioning. Project execution as conglomeration of technical and nontechnical activities, Detailed Engineering activities, Pre project execution main clearances and
documents, Project team: Role of each member, Importance Project site: Data required with significance, Project contracts.

UNIT III  PROJECT EXECUTION AND COSTING CONCEPTS  9

UNIT IV  COSTING OF SERVICE SECTOR AND BUDGETERY CONTROL  9
Just-in-time approach, Material Requirement Planning, Enterprise Resource Planning, Activity-Based Cost Management, Bench Marking; Balanced Score Card and Value-Chain Analysis, Budgetary Control: Flexible Budgets; Performance budgets; Zero-based budgets.

UNIT V  QUANTITATIVE TECHNIQUES FOR COST MANAGEMENT  9
Linear Programming, PERT/CPM, Transportation problems, Assignment problems, Learning Curve Theory.

TOTAL: 45 PERIODS

OUTCOMES

CO1 – Understand the costing concepts and their role in decision making
CO2 – Understand the project management concepts and their various aspects in selection
CO3 – Interpret costing concepts with project execution
CO4 – Gain knowledge of costing techniques in service sector and various budgetary control techniques
CO5 - Become familiar with quantitative techniques in cost management

OE5095  COMPOSITE MATERIALS  L T P C
3 0 0 3

OBJECTIVES:
- Summarize the characteristics of composite materials and effect of reinforcement in composite materials.
- Identify the various reinforcements used in composite materials.
- Compare the manufacturing process of metal matrix composites.
- Understand the manufacturing processes of polymer matrix composites.
- Analyze the strength of composite materials.
UNIT I INTRODUCTION
Definition – Classification and characteristics of Composite materials - Advantages and application of composites - Functional requirements of reinforcement and matrix - Effect of reinforcement (size, shape, distribution, volume fraction) on overall composite performance.

UNIT II REINFORCEMENTS
Preparation-layup, curing, properties and applications of glass fibers, carbon fibers, Kevlar fibers and Boron fibers - Properties and applications of whiskers, particle reinforcements - Mechanical Behavior of composites: Rule of mixtures, Inverse rule of mixtures - Isostrain and Isostress conditions.

UNIT III MANUFACTURING OF METAL MATRIX COMPOSITES

UNIT IV MANUFACTURING OF POLYMER MATRIX COMPOSITES

UNIT V STRENGTH
Laminar Failure Criteria-strength ratio, maximum stress criteria, maximum strain criteria, interacting failure criteria, hygrothermal failure. Laminate first play failure-insight strength; Laminate strength-ply discount truncated maximum strain criterion; strength design using caplet plots; stress concentrations.

TOTAL: 45 PERIODS

OUTCOMES:
- CO1 - Know the characteristics of composite materials and effect of reinforcement in composite materials.
- CO2 – Know the various reinforcements used in composite materials.
- CO3 – Understand the manufacturing processes of metal matrix composites.
- CO4 – Understand the manufacturing processes of polymer matrix composites.
- CO5 – Analyze the strength of composite materials.

OBJECTIVES:
- Interpret the various types of wastes from which energy can be generated
- Develop knowledge on biomass pyrolysis process and its applications
- Develop knowledge on various types of biomass gasifiers and their operations
- Invent knowledge on biomass combustors and its applications on generating energy
- Summarize the principles of bio-energy systems and their features

UNIT I  INTRODUCTION TO EXTRACTION OF ENERGY FROM WASTE  9
Classification of waste as fuel – Agro based, Forest residue, Industrial waste - MSW – Conversion devices – Incinerators, gasifiers, digestors

UNIT II  BIOMASS PYROLYSIS  9
Pyrolysis – Types, slow fast – Manufacture of charcoal – Methods - Yields and application – Manufacture of pyrolytic oils and gases, yields and applications.

UNIT III  BIOMASS GASIFICATION  9

UNIT IV  BIOMASS COMBUSTION  9
Biomass stoves – Improved chullahs, types, some exotic designs, Fixed bed combustors, Types, inclined grate combustors, Fluidized bed combustors, Design, construction and operation - Operation of all the above biomass combustors.

UNIT V  BIO ENERGY  9
Properties of biogas (Calorific value and composition), Biogas plant technology and status - Bio energy system - Design and constructional features - Biomass resources and their classification - Biomass conversion processes - Thermo chemical conversion - Direct combustion - biomass gasification - pyrolysis and liquefaction - biochemical conversion - anaerobic digestion - Types of biogas Plants – Applications - Alcohol production from biomass - Bio diesel production - Urban waste to energy conversion - Biomass energy programme in India.

TOTAL: 45 PERIODS

OUTCOMES:
CO1 – Understand the various types of wastes from which energy can be generated
CO2 – Gain knowledge on biomass pyrolysis process and its applications
CO3 – Develop knowledge on various types of biomass gasifiers and their operations
CO4 – Gain knowledge on biomass combustors and its applications on generating energy
CO5 – Understand the principles of bio-energy systems and their features

AUDIT COURSES (AC)
AX5091 ENGLISH FOR RESEARCH PAPER WRITING L T P C 2 0 0 0

OBJECTIVES
- Teach how to improve writing skills and level of readability
- Tell about what to write in each section
- Summarize the skills needed when writing a Title
- Infer the skills needed when writing the Conclusion
- Ensure the quality of paper at very first-time submission

UNIT I INTRODUCTION TO RESEARCH PAPER WRITING
Planning and Preparation, Word Order, Breaking up long sentences, Structuring Paragraphs and Sentences, Being Concise and Removing Redundancy, Avoiding Ambiguity and Vagueness

UNIT II PRESENTATION SKILLS

UNIT III TITLE WRITING SKILLS
Key skills are needed when writing a Title, key skills are needed when writing an Abstract, key skills are needed when writing an Introduction, skills needed when writing a Review of the Literature, Methods, Results, Discussion, Conclusions, The Final Check

UNIT IV RESULT WRITING SKILLS
Skills are needed when writing the Methods, skills needed when writing the Results, skills are needed when writing the Discussion, skills are needed when writing the Conclusions

UNIT V VERIFICATION SKILLS
Useful phrases, checking Plagiarism, how to ensure paper is as good as it could possibly be the first-time submission

TOTAL: 30 PERIODS

OUTCOMES
CO1 – Understand that how to improve your writing skills and level of readability
CO2 – Learn about what to write in each section
CO3 – Understand the skills needed when writing a Title
CO4 – Understand the skills needed when writing the Conclusion
CO5 – Ensure the good quality of paper at very first-time submission

AX5092 DISASTER MANAGEMENT LTPC

OBJECTIVES
- Summarize basics of disaster
- Explain a critical understanding of key concepts in disaster risk reduction and humanitarian response.
- Illustrate disaster risk reduction and humanitarian response policy and practice from multiple perspectives.
- Describe an understanding of standards of humanitarian response and practical relevance in specific types of disasters and conflict situations.
- Develop the strengths and weaknesses of disaster management approaches

UNIT I INTRODUCTION 6
Disaster: Definition, Factors and Significance; Difference between Hazard And Disaster; Natural and Manmade Disasters: Difference, Nature, Types and Magnitude.

UNIT II REPERCUSSIONS OF DISASTERS AND HAZARDS 6

UNIT III DISASTER PRONE AREAS IN INDIA 6
Study of Seismic Zones; Areas Prone To Floods and Droughts, Landslides And Avalanches; Areas Prone To Cyclonic and Coastal Hazards with Special Reference To Tsunami; Post-Disaster Diseases and Epidemics

UNIT IV DISASTER PREPAREDNESS AND MANAGEMENT 6
Preparedness: Monitoring Of Phenomena Triggering a Disaster or Hazard; Evaluation of Risk: Application of Remote Sensing, Data from Meteorological And Other Agencies, Media Reports: Governmental and Community Preparedness.

UNIT V RISK ASSESSMENT 6
Disaster Risk: Concept and Elements, Disaster Risk Reduction, Global and National Disaster Risk Situation. Techniques of Risk Assessment, Global Co-Operation in Risk Assessment and Warning, People’s Participation in Risk Assessment. Strategies for Survival

TOTAL : 30 PERIODS
CO1: Ability to summarize basics of disaster
CO2: Ability to explain a critical understanding of key concepts in disaster risk reduction and humanitarian response.
CO3: Ability to illustrate disaster risk reduction and humanitarian response policy and practice from multiple perspectives.
CO4: Ability to describe an understanding of standards of humanitarian response and practical relevance in specific types of disasters and conflict situations.
CO5: Ability to develop the strengths and weaknesses of disaster management approaches

AX5093 Sanskrit for Technical Knowledge

OBJECTIVES
- Illustrate the basic sanskrit language.
- Recognize sanskrit, the scientific language in the world.
- Appraise learning of sanskrit to improve brain functioning.
- Relate sanskrit to develop the logic in mathematics, science & other subjects enhancing the memory power.
- Extract huge knowledge from ancient literature.

UNIT I ALPHABETS
Alphabets in Sanskrit

UNIT II TENSES AND SENTENCES
Past/Present/Future Tense - Simple Sentences

UNIT III ORDER AND ROOTS
Order - Introduction of roots

UNIT IV SANSKRIT LITERATURE
Technical information about Sanskrit Literature
OUTCOMES

- CO1 - Understanding basic Sanskrit language.
- CO2 - Write sentences.
- CO3 - Know the order and roots of Sanskrit.
- CO4 -Know about technical information about Sanskrit literature.
- CO5 - Understand the technical concepts of Engineering.

VALUE EDUCATION

OBJECTIVES
Students will be able to
- Understand value of education and self-development
- Imbibe good values in students
- Let the should know about the importance of character

UNIT I

UNIT II

UNIT III

UNIT IV

TOTAL: 30 PERIODS

OUTCOMES
Students will be able to
- Knowledge of self-development.
- Learn the importance of Human values.
- Developing the overall personality.

Suggested reading
OBJECTIVES
Students will be able to:

- Understand the premises informing the twin themes of liberty and freedom from a civil rights perspective.
- To address the growth of Indian opinion regarding modern Indian intellectuals’ constitutional
role and entitlement to civil and economic rights as well as the emergence nation hood in the early years of Indian nationalism.
- To address the role of socialism in India after the commencement of the Bolshevik Revolution in 1917 and its impact on the initial drafting of the Indian Constitution.

UNIT I HISTORY OF MAKING OF THE INDIAN CONSTITUTION:
History, Drafting Committee, (Composition & Working)

UNIT II PHILOSOPHY OF THE INDIAN CONSTITUTION:
Preamble, Salient Features

UNIT III CONTOURS OF CONSTITUTIONAL RIGHTS AND DUTIES:

UNIT IV ORGANS OF GOVERNANCE:
Parliament, Composition, Qualifications and Disqualifications, Powers and Functions, Executive, President, Governor, Council of Ministers, Judiciary, Appointment and Transfer of Judges, Qualifications, Powers and Functions.

UNIT V LOCAL ADMINISTRATION:

UNIT VI ELECTION COMMISSION:
Election Commission: Role and Functioning, Chief Election Commissioner and Election Commissioners - Institute and Bodies for the welfare of SC/ST/OBC and women.

TOTAL: 30 PERIODS

OUTCOMES
Students will be able to:

- Discuss the growth of the demand for civil rights in India for the bulk of Indians before the arrival of Gandhi in Indian politics.
- Discuss the intellectual origins of the framework of argument that informed the conceptualization of social reforms leading to revolution in India.
- Discuss the circumstances surrounding the foundation of the Congress Socialist Party [CSP] under the leadership of Jawaharlal Nehru and the eventual failure of the proposal of direct elections through adult suffrage in the Indian Constitution.
- Discuss the passage of the Hindu Code Bill of 1956.

Suggested reading
1. The Constitution of India, 1950 (Bare Act), Government Publication.

AX5096 PEDAGOGY STUDIES L T P C
2 0 0 0

OBJECTIVES
Students will be able to:
- Review existing evidence on there view topic to inform programme design and policy
- Making under taken by the DfID, other agencies and researchers.
- Identify critical evidence gaps to guide the development.

UNIT I INTRODUCTION AND METHODOLOGY:
Aims and rationale, Policy background, Conceptual framework and terminology - Theories of learning, Curriculum, Teacher education - Conceptual framework, Research questions - Overview of methodology and Searching.

UNIT II THEMATIC OVERVIEW
Pedagogical practices are being used by teachers in formal and informal classrooms in developing countries - Curriculum, Teacher education.

UNIT III EVIDENCE ON THE EFFECTIVENESS OF PEDAGOGICAL PRACTICES
Methodology for the in depth stage: quality assessment of included studies - How can teacher education (curriculum and practicum) and the school curriculum and guidance materials best support effective pedagogy? - Theory of change - Strength and nature of the body of evidence for effective pedagogical practices - Pedagogic theory and pedagogical approaches - Teachers' attitudes and beliefs and Pedagogic strategies.

UNIT IV PROFESSIONAL DEVELOPMENT
Professional development: alignment with classroom practices and follow up support - Peer support - Support from the head teacher and the community - Curriculum and assessment - Barriers to learning: limited resources and large class sizes

UNIT V RESEARCH GAPS AND FUTURE DIRECTIONS
Research design – Contexts – Pedagogy - Teacher education - Curriculum and assessment - Dissemination and research impact.

TOTAL: 30 PERIODS

OUTCOMES
Students will be able to understand:
- What pedagogical practices are being used by teachers informal and informal classrooms in
• What is the evidence on the effectiveness of these pedagogical practices, in what conditions, and with what population of learners?
• How can teacher education (curriculum and practicum) and the school curriculum and guidance materials best support effective pedagogy?

Suggested reading

AX5097 STRESS MANAGEMENT BY YOGA

OBJECTIVES
• To achieve overall health of body and mind
• To overcome stress

UNIT I
Definitions of Eight parts of yoga (Ashtanga)

UNIT II
Yam and Niyam - Do’s and Don’ts in life - i) Ahinsa, satya, astheya, bramhacharya and aparigraha, ii) Ahinsa, satya, astheya, bramhacharya and aparigraha.

UNIT III
Asan and Pranayam - Various yog poses and their benefits for mind & body - Regularization of breathing techniques and its effects - Types of pranayam

TOTAL: 30 PERIODS

OUTCOMES
Students will be able to:
• Develop healthy mind in a healthy body thus improving social health also
• Improve efficiency

SUGGESTED READING
1. ‘Yogic Asanas for Group Training-Part-1” : Janardan Swami Yoga bhyasi Mandal, Nagpur
2. “Rajayoga or conquering the Internal Nature” by Swami Vivekananda, Advaita Ashrama (Publication Department), Kolkata

101
OBJECTIVES

- To learn to achieve the highest goal happily
- To become a person with stable mind, pleasing personality and determination
- To awaken wisdom in students

UNIT I

Neetisatakam-holistic development of personality - Verses- 19,20,21,22 (wisdom) - Verses- 29,31,32 (pride & heroism) – Verses- 26,28,63,65 (virtue) - Verses- 52,53,59 (don’ts) - Verses- 71,73,75,78 (do’s)

UNIT II

Approach to day to day work and duties - Shrimad Bhagwad Geeta: Chapter 2-Verses 41, 47,48 - Chapter 3-Verses 13, 21, 27, 35 Chapter 6-Verses 5,13,17,23, 35 - Chapter 18-Verses 45, 46, 48.

UNIT III

Statements of basic knowledge - Shrimad Bhagwad Geeta: Chapter2-Verses 56, 62, 68 Chapter 12 - Verses 13, 14, 15, 16,17, 18 - Personality of role model - shrimad bhagwad geeta - Chapter2-Verses 17, Chapter 3-Verses 36,37,42 - Chapter 4-Verses 18, 38,39 Chapter18 – Verses 37,38,63

TOTAL: 30 PERIODS

OUTCOMES

Students will be able to

- Study of Shrimad-Bhagwad-Geeta will help the student in developing his personality and achieve the highest goal in life
- The person who has studied Geeta will lead the nation and man kind to peace and prosperity
- Study of Neet is hatakam will help in developing versatile personality of students.

Suggested reading
