The objective is to develop skill in applying industrial engineering techniques to real/practical problems.

A student is expected to select a topic in the industrial engineering area such as forecasting, production planning, scheduling, operations research, facilities planning and layout, transportation and distribution, quality, supply chain, simulation etc. Identify a problem and collect necessary data and analyse using appropriate tool/technique.

Data can be collected from industry or standard data sets available in literature can be used. A comprehensive report is to be submitted towards the end of the VIIth semester. Report and oral examination will be evaluated by two member committee constituted by the Head of the Department.

TOTAL : 90 PERIODS
COURSE OBJECTIVE:
To apply the principles/techniques that they have learnt to a new problem situation which may be the design and manufacture of a device, a research investigation, a computer or management project or a design problem.

A project topic must be selected either from published list or students themselves can propose suitable topics in consultation with the guides. It can be a theoretical research projector industry oriented. Generally it is a group project.

The progress of the project is evaluated based on a minimum of three reviews. The review committee may be constituted by the Head of the Department. A project report is required at the end of the semester. The project work is evaluated jointly by external and internal examiners constituted by the Head of the Department based on oral presentation and the project report
