

ANNA UNIVERSITY, CHENNAI
NON- AUTONOMOUS COLLEGES AFFILIATED ANNA UNIVERSITY
M.E. BIOMEDICAL ENGINEERING
REGULATIONS – 2021
CHOICE BASED CREDIT SYSTEM

1. PROGRAMME EDUCATIONAL OBJECTIVES (PEOs):

- I. To enhance the skills of graduates to design a variety of electronic or computer based devices and develop software for applications including biomedical instrumentation, medical imaging, physiological measurement and biomedical signal processing.
- II. To enable the graduates to acquire technical knowledge and skills required for Biomedical Engineering that meets industrial and hospital requirements.
- III. To enable graduates to effectively involve themselves in product development for solving Biomedical Engineering cutting-edge technology problems.
- IV. To facilitate the graduates to exhibit leadership skills, make decisions with societal and ethical responsibilities, function and communicate effectively in multidisciplinary settings.
- V. To enable the graduates to recognize the need for lifelong learning, enhance their technical competencies throughout their career and become successful Entrepreneurs.

Programme Outcome

1. **Research aptitude:** An ability to independently carry out research/investigation and development work to solve practical problems
2. **Technical documentation:** An ability to write and present a substantial technical report/document
3. **Technical competence:** Students should be able to demonstrate a degree of mastery over the area as per the specialization of the program. The mastery should be at a level higher than the requirements in the appropriate bachelor program.
4. **Engineering Design** Apply knowledge of mathematics, science, and engineering to design, experiment, analyze and interpretation of health care devices
5. **Environment and Society:** Demonstrate leadership in their respective careers in biomedical engineering or interrelated areas of industry, government, academia, and clinical practice and understanding of professional and ethical responsibility
6. **Life-long Learning:** Continuously update knowledge to bridge the gap between healthcare / Medicine and Technology.

2. PROGRAM SPECIFIC OUTCOMES (PSOs):

1. To acquire and understand the basic skill sets required for Biomedical Engineering.
2. To implement the techniques and tools of Biomedical Engineering to address the needs of technology in healthcare domain.
3. To address the technology associated with the interaction between living and non-living materials and systems
4. To bridge the gap between healthcare / Medicine and technology doctors and Engineers

8.	TOTAL CREDIT	22	23	18	12	75

COURSE OBJECTIVES:

- To encourage students to develop a working knowledge of the central ideas of Linear Algebra.
- To enable students to understand the concepts of Probability and Random Variables.
- To make students understand the notion of a Markov chain, and how simple ideas of conditional probability and matrices can be used to give a thorough and effective account of discrete-time Markov chains.
- To familiarize the students with the formulation and construction of a mathematical model for a linear programming problem in real life situation.
- To introduce the Fourier Transform as an extension of Fourier techniques on periodic functions and to solve partial differential equations.

UNIT – I LINEAR ALGEBRA 12

Vector spaces – Norms – Inner products – Eigenvalues using QR transformations – QR factorization – Generalized eigenvectors – Canonical forms – Singular value decomposition and applications – Pseudo inverse – Least square approximations – Toeplitz matrices and some applications.

UNIT – II ONE DIMENSIONAL RANDOM VARIABLES 12

Random variables – Probability function – Moments – Moment generating functions and their properties – Binomial, Poisson, Geometric, Uniform, Exponential, Gamma and Normal distributions – Function of a Random Variable.

UNIT – III RANDOM PROCESSES 12

Classification – Auto correlation – Cross correlation - Stationary random process – Markov process – Markov chain – Poisson process – Gaussian process.

UNIT – IV LINEAR PROGRAMMING 12

Formulation – Graphical solution – Simplex method – Two phase method – Transportation and Assignment models.

UNIT – V FOURIER TRANSFORM FOR PARTIAL DIFFERENTIAL EQUATIONS 12

Fourier transforms: Definitions, properties – Transform of elementary functions, Dirac Delta functions – Convolution theorem, Parseval's identity – Solutions to partial differential equation: Heat equations, Wave equations, Laplace and Poisson's equations.

TOTAL: 60 PERIODS**COURSE OUTCOMES:**

At the end of the course, students will be able to

- apply the concepts of linear algebra to solve practical problems.
- use the ideas of probability and random variables in solving engineering problems.
- classify various random processes and solve problems involving stochastic processes.
- formulate and construct mathematical models for linear programming problems and solve the transportation and assignment problems.
- apply the Fourier transform methods of solving standard partial differential equations.

RM4151	RESEARCH METHODOLOGY AND IPR	L T P C
		2 0 0 2
UNIT I	RESEARCH DESIGN	6
Overview of research process and design, Use of Secondary and exploratory data to answer the research question, Qualitative research, Observation studies, Experiments and Surveys.		
UNIT II	DATA COLLECTION AND SOURCES	6
Measurements, Measurement Scales, Questionnaires and Instruments, Sampling and methods. Data - Preparing, Exploring, examining and displaying.		
UNIT III	DATA ANALYSIS AND REPORTING	6
Overview of Multivariate analysis, Hypotheses testing and Measures of Association. Presenting Insights and findings using written reports and oral presentation.		
UNIT IV	INTELLECTUAL PROPERTY RIGHTS	6
Intellectual Property – The concept of IPR, Evolution and development of concept of IPR, IPR development process, Trade secrets, utility Models, IPR & Bio diversity, Role of WIPO and WTO in IPR establishments, Right of Property, Common rules of IPR practices, Types and Features of IPR Agreement, Trademark, Functions of UNESCO in IPR maintenance.		
UNIT V	PATENTS	6
Patents – objectives and benefits of patent, Concept, features of patent, Inventive step, Specification, Types of patent application, process E-filing, Examination of patent, Grant of patent, Revocation, Equitable Assignments, Licences, Licensing of related patents, patent agents, Registration of patent agents.		
		TOTAL: 30 PERIODS

COURSE OBJECTIVES:

- To introduce the characteristics of different biosignals
- To discuss linear and non-linear filtering techniques to extract desired information
- To demonstrate the significance of wavelet detection applied in biosignal processing.
- To extract the features from the biosignal
- To introduce techniques for automated classification and decision making to aid diagnosis

UNIT I SIGNAL, SYSTEM AND SPECTRUM 9

Characteristics of some dynamic biomedical signals, Noises- random, structured and physiological noises. Filters- IIR and FIR filters. Spectrum – power spectral density function, cross-spectral density and coherence function, cepstrum and homomorphic filtering. Estimation of mean of finite time signals.

UNIT II TIME SERIES ANALYSIS AND SPECTRAL ESTIMATION 9

Time series analysis – linear prediction models, process order estimation, non-stationary process, fixed segmentation, adaptive segmentation, application in EEG, PCG and HRV signals, model based ECG simulator. Spectral estimation – Blackman Tukey method, periodogram and model based estimation. Application in Heart rate variability, PCG signals.

UNIT III ADAPTIVE FILTERING AND WAVELET DETECTION 9

Filtering – LMS adaptive filter, adaptive noise cancelling in ECG, improved adaptive filtering in FECCG, EEG and other applications in Bio signals, Wavelet detection in ECG – structural features, matched filtering, adaptive wavelet detection, detection of overlapping wavelets.

UNIT IV ANALYSIS OF BIOSIGNAL 9

Removal of artifact – ECG, Event detection – ECG, P Wave, QRS complex, T wave, Correlation analysis of ECG signals, Average of Signals-PCG, ECG and EMG.

UNIT V BIOSIGNAL CLASSIFICATION AND RECOGNITION 9

Statistical signal classification, linear discriminate function, direct feature selection and ordering, Back propagation neural network based classification.

Case study: 1. Various methods used to extract features from EEG signal

Case Study 2: Diagnosis and monitoring of sleep apnea

COURSE OUTCOMES:

Upon Completion of the course, the students will be able to:

CO1: Analyse the different types of signals & systems

CO2: Analyse signals in time series domain & estimate the spectrum

CO3: Understand the significance of wavelet detection applied in biosignal processing

CO4: Extract the features from biosignal

CO5: Describe the performance of the classification of biosignals

BM4152

HUMAN ANATOMY AND PHYSIOLOGY

L T P C
3 0 0 3

COURSE OBJECTIVES:

- To identify all the organelles of an animal cell and their function.
- To understand the structure and functions of the different types of systems of the human body.
- To understand about sensory organs and accessory organs of human being
- To demonstrate their knowledge of importance of anatomical features and physiology of human systems
- Gain knowledge in regulatory mechanism of human body

UNIT I ORGANIZATION OF THE HUMAN BODY 8

Organization of the human body: from atoms to the entire organism. Anatomical directions and planes. Cell structures and functions – Plasma membrane and sub-organelles. Cell membrane transport. Cell to cell signaling, Cell cycle and regulations. Action potential, Homeostasis, Types of specialized tissues

UNIT II INTEGUMENTARY, SKELETAL, MUSCULAR AND RESPIRATORY SYSTEMS 9

Skin: Structure of skin and their parts, Skeletal: Types of Bone and function – Physiology of Bone formation – Division of Skeleton – Types of joints and function – Types of cartilage and function. Muscular: Parts of Muscle – Movements. Respiratory: Parts of Respiratory Systems – Types of respiration - Mechanisms of Breathing – Regulation of Respiration

UNIT III CARDIOVASCULAR, LYMPHATIC AND ENDOCRINE SYSTEMS 10

Cardiovascular: Structure of Heart, Conducting System of Heart – Properties of Cardiac Muscle - Cardiac Cycle – Heart Beat – Types of Blood vessel – Regulation of Heart rate and Blood pressure. Blood: Components of Blood and functions.- Blood Groups and importance Lymphatic: Types of Lymphatic organs and vessels – Functions. Endocrine: Pituitary and Thyroid glands

UNIT IV NERVOUS, SENSE ORGANS AND REPRODUCTIVE SYSTEMS 10

Nervous: Structure, types and properties of Neuron, Mechanism of Nerve impulse. Brain: Structure and parts of brain – central and peripheral nervous system – Reflex mechanism. Sense: Structure and functions of eye and ear. Reproductive: Anatomy of testis and ovary

UNIT V DIGESTIVE AND URINARY SYSTEMS 8

Digestive: Organs of Digestive system – Digestion and Absorption. **Urinary:** Structure of Kidney and Nephron – Mechanisms of Urine formation – Regulation of Blood pressure by Urinary System – Urinary reflex

TOTAL:45 PERIODS

COURSE OUTCOMES:

Upon Completion of the course, the students will be able to:

- CO1:** Explain the general terminology, cell structure and function, histology, gross anatomy, and physiology related to the various human systems
- CO2:** Acquire knowledge various anatomical parts of the human systems
- CO3:** Understand about interconnectedness of anatomy and physiology of various systems
- CO4:** Acquire knowledge in human organ systems interrelation and apply a holistic approach to human health.
- CO5:** Apply concept and knowledge of human systems to novel technical and/or clinical scenarios

BM4101

MEDICAL IMAGING SYSTEMS

L T P C
3 0 0 3

COURSE OBJECTIVES:

- To understand the production of x-rays and its application to different medical Imaging
- To explore the different types of Radio diagnostic techniques.
- To understand the special imaging techniques for visualizing the cross sections of the body.
- To understand the production of Magnetic resonance images for various pulse sequences.
- To realize the importance of image quality assessments for medical imaging systems.

UNIT I X – RAYS

9

Principle and production of soft X – Rays, X- ray machine and digital radiography, principles of Angiography and Fluoroscopic Techniques, digital subtraction angiography, mammography.

UNIT II CT AND ULTRASOUND IMAGING

9

CT principle- Multi section Radiography, Computerised Axial Tomography, Type of Detection, image reconstruction, Spiral CT, Transverse Tomography,3D Imaging. Ultrasonic frequency for medical application, different modes of Display A, B and M, ultrasonic probes, Real time echo and 2D scanner.

UNIT III COMPUTER AIDED TOMOGRAPHY

9

Need for sectional images, Principles of sectional scanning, Method of convolution and Back Propagation, Methods of reconstruction, Multislice CT, artifacts.

UNIT IV MAGNETIC RESONANCE IMAGING AND EMISSION COMPUTED TOMOGRAPHY IMAGING

9

Principle of MRI, MRI instrumentation, Imaging Different Sections of the Body, Tissue Characterization, MR Spectroscopy, Functional MRI. Alpha, Beta, Gamma Emission, different types of Radiation Detectors, Functions of Gamma Camera, PET, SPECT, PET/CT, PET/MRI.

UNIT V QUALITY METRICS FOR IMAGING SYSTEMS

9

Global parameter assessment, spatial – frequency assessment, Image – processing assessment, Observer assessment, Image discrimination models, figure of merit, Comparing model to human Performance.

COURSE OUTCOMES:

On successful completion of this course, the student will be able to

CO1: Explain the functionalities and applications of X ray in medicine.

CO2: Demonstrate the images acquisition procedures using CT.

CO3: Explain the suitable projection methods for anatomy and biology specific.

CO4: Demonstrate the applications of magnetic field in the field of medicine.

CO5: Explain the assessment method to quantify the presence of noise in the image.

BM4102 **BIO MEDICAL SENSORS, INSTRUMENTATION AND EQUIPMENT** **L T P C**
4 0 0 4

COURSE OBJECTIVES:

- To understand the purpose of measurement, the methods of measurements, errors associated with measurements.
- To obtain the knowledge of biosensors in medical field.
- To gain the domain knowledge in bio potential and its measurements
- To Study the design of bio amplifiers
- Get familiarized with important medical equipment used in critical care.

UNIT I **INTRODUCTION TO MEASUREMENT** **11**

Measurement System – Instrumentation - Classification and Characteristics of Transducers – Static and Dynamic - Errors in Measurements and their statistical analysis – Calibration - Primary and secondary standards.

UNIT II **BIO SENSORS** **11**

Chemical sensors, characteristics, classes of chemical sensors, electrochemical cell, biochemical sensors, multisensory arrays, RTD materials & range, relative resistance vs. temperature characteristics, thermistor characteristics, Biomedical applications of temperature sensors. Active type: Thermocouple - characteristics.

UNIT III **BIOPOTENTIAL AND ITS MEASUREMENTS** **14**

Origin of bio potential and its propagation. Electrode-electrolyte interface, electrode–skin interface, half-cell potential, impedance, polarization effects of electrode – non polarizable electrodes. Types of electrodes - surface, needle and micro electrodes and their equivalent circuits. Biosignals characteristics – frequency and amplitude ranges. ECG – Einthoven’s triangle, standard 12 lead system. EEG – 10-20 electrode system, unipolar, bipolar and average mode. EMG– unipolar and bipolar mode.

UNIT IV **DESIGN OF BIOAMPLIFIERS** **12**

Need for bio-amplifier - single ended bio-amplifier, differential bio-amplifier, Impedance matching circuit, isolation amplifiers – transformer and optical isolation - isolated DC amplifier and AC carrier amplifier., Power line interference, Right leg driven ECG amplifier, Band pass filtering.

UNIT V MEDICAL EQUIPMENT

12

Basics of Critical Care Equipment – Bedside monitors, ICU / CCU equipment – Defibrillator and its types, Pacemaker and its types. Ventilator and its types, Dialysers, Endoscopy, laparoscopy, Oxygenators.

TOTAL: 60 PERIODS**COURSE OUTCOMES:**

Upon completion of this course the student will be able to

CO1: Understand the science behind the measurement systems

CO2: Explain the different types of Bio sensors

CO3: Understand various bio signals and its measurements

CO4: Design a bio-amplifier

CO5: Describe various medical equipment used in critical care

**CLINICAL INSTRUMENTATION AND DESIGN
LABORATORY**

**L T P C
0 0 3 1.5**

COURSE OBJECTIVES:

- Familiarize the design of preamplifiers and its significance
- Design various bio signals acquisition amplifiers and Isolation Circuits
- To Study the various medical equipment used in medical field
- Study the critical care equipment in medical field
- Design 3D printing model for medical application

LIST OF EXPERIMENTS:

1. Design of pre amplifiers to acquire any Bio-signals
2. Design of ECG amplifier with suitable filter to remove movement artifacts and power line noise
3. Design of suitable circuit to calculate heart rate
4. Design of optical Isolation Amplifier
5. Measurement of Pulse Rate using suitable device
6. Measurement of Respiratory Rate using Suitable device
7. Study the working of Defibrillator and pacemakers
8. Study of ventilators
9. Study the use of any 2-D and 3-D Modelling Software
10. Develop prototyping using 3D printing

COURSE OUTCOMES:

Upon completion of this course the student will be able to

CO1: Design a preamplifier on his own

CO2: Design amplifier and Isolation circuits for any bio signals

CO3: Obtain the domain knowledge in Basic medical equipment

CO4: Obtain the domain knowledge in critical care equipment

CO5: Get familiarized with important of 3D printing in medical field.

BIO SIGNAL PROCESSING LABORATORY

L T P C
0 0 3 1.5

COURSE OBJECTIVES:

- To understand the analysis of biosignals
- To know the various methods for denoising of biosignals.
- To understand the extraction of features in biosignals
- To gain knowledge about biosignal compression.
- To detect and classify the abnormalities in biosignals

LIST OF EXPERIMENTS: MATLAB / EQUIVALENT SOFTWARE PACKAGE

1. Removal of noise and artifact using filtering
2. Denoising of biosignals using wavelets

3. Noise cancellation using Adaptive filters
4. QRS detection using Pan-Tompkins algorithm
5. Heart rate variability analysis in ECG signals
6. Event detection in EEG signals
7. Cepstral analysis of speech signals
8. Multiresolution analysis of EEG signal using wavelet transform
9. Feature extraction in EMG signals
10. Adaptive segmentation of EEG signals
11. Feature reduction using PCA
12. Disease classification of biosignals
13. Autoregressive modelling of biosignals
14. Biosignal compression
15. Biosignal analysis in virtual instrumentation platform

COURSE OUTCOMES:

On completion of the laboratory course, the students will be able to:

CO1: Develop an algorithm for preprocessing of biosignals.

CO2: Perform denoising and analyze the spectral characteristics of biosignals.

CO3: Perform biosignal compression.

CO4: Analyze the biosignals in virtual instrumentation platform

BM4201	MEDICAL DEVICE DESIGN	L T P C 3 0 0 3
COURSE OBJECTIVES:		
<ul style="list-style-type: none"> • To understand about basic design processes of medical device • To introduce with basics of design, construction and development devices • To follow a deterministic engineering design process to create new products. • To apply engineering theory to practice. • To perform design transfer and countermeasure development. 		
UNIT I	INTRODUCTION	9
Needs finding, problem identification, prior art searches, strategy and concept generation, estimation, sketching, sketch modelling, machine elements, ergonomics and prototyping.		

UNIT II	DESIGN OF MEDICAL DEVICES & SYSTEM	9
Medical device classification, bioethics, and privacy, biocompatibility and sterilization techniques, design of clinical , trials, design control and regulatory requirements, introduction to specific, medical technologies: biopotentials measurement (EMG, EOG, ECG, EEG), medical diagnostics (In-vitro diagnostics), medical diagnostics (Imaging), minimally invasive devices, surgical tools and implants.		
UNIT III	DEVELOPMENT STRATEGY AND PLANNING	9
Intellectual property strategy – research and development strategy – clinical strategy – regulatory strategy – quality and process management – reimbursement strategy – marketing and stakeholder strategy – sales and distribution strategy – competitive advantage and business strategy.		
UNIT IV	HARDWARE AND SOFTWARE DESIGN	9
Hardware design, Hardware risk analysis, Design and project merits, Design for six sigma, software design, software coding, software risk analysis, software metrics, licensing and alternate pathways		
UNIT V	DESIGN TRANSFER AND IPR	9
Transfer to manufacturing, documents and deliverables. Standard-ISO, IES, Intellectual Property - Patents, Copy rights, Trademarks, Trade secrets.		
TOTAL: 45 PERIODS

Avg	(10/4)=2.5	(5/3)=1.6	(8/4)=2	(11/5)=2.2	(4/2)=2	(7/4)=1.75

COURSE OBJECTIVES:

- To introduce concepts of materials, surface and tissue placement in biomaterial functions
- To understand diverse elements controlling biological responses to materials
- To get the clear understanding of application of mechanics in medicine.
- To study the properties of blood, bone and soft tissues like articular cartilage tendons and ligaments
- To gain necessary knowledge about accident and injuries.

UNIT I INTRODUCTION TO BIOMATERIALS 9

Definition of biomaterials, Metals, Ceramics, Polymers and Biomimetic Materials, Composites. mechanical properties, surface chemistry of materials, surface modification, Tissue Reaction, Wound Kinetics, Bio Compatibility, Material preparation, Properties, uses in medicine and biosciences and failure mechanisms.

UNIT II STERILIZATION AND TESTING OF BIOMATERIALS 8

Sterilization techniques. ETO, gamma radiation, autoclaving. Effects of sterilization on material properties. Testing with Tissue Culture – in vitro and in vivo assessment of biocompatibility, testing with Soft Tissues and testing at non Thrombogenic surface – blood compatibility and thrombogenicity, ISO 10993- standard for assessment of biocompatibility.

UNIT III TISSUE AND FLUID BIOMECHANICS 10

Hard Tissues: Structure, composition & mechanical properties of bone, cortical and cancellous bones, viscoelastic properties, Maxwell & Voight models – anisotropy. Electrical properties of bone, type of fractures, biomechanics of fracture healing. Soft Tissues: Structure and functions of Soft Tissues: Cartilage, Tendon, Ligament, and Muscle; Material Properties: Cartilage, Tendon, Ligament, and Muscle; Modeling: Cartilage, Tendon, Ligament, and Muscle.

Newton's law, stress, strain, elasticity, Hooke's law, viscosity, Newtonian fluid, Non-Newtonian fluid, viscoelastic fluids, Vascular tree. Relationship between diameters, Velocity and pressure of blood flow, Resistance against flow

UNIT IV MOVEMENT BIOMECHANICS AND IMPLANTS 9

Gait analysis, body & limbs: mass & motion characteristics actions, forces transmitted by joints. Joints forces results in the normal & disable human body, normal & fast gait on the level. Patterns: Push/Throw Continuum Biomechanics of push - like motions, Biomechanics of throw - like motions. General concepts of Implants, classification of implants, Soft tissue replacements and Hard tissue replacements, basic consideration and limitation of tissue replacement, Design of orthopedic implant, specifications for a prosthetic joint, fixation of implants.

UNIT V CARDIAC & RESPIRATORY MECHANICS 9

Cardiovascular system, Mechanical properties of blood vessels: arteries, arterioles, capillaries, and veins. artificial heart valves, biological and mechanical valves development, testing of valves. Alveoli mechanics, Interaction of blood and lung, P-V curve of lung, Breathing mechanism, Airway resistance, Physics of lung diseases.

SUGGESTED ACTIVITIES:

- 1: Stress-strain analysis of hip prosthesis
- 2: Estimation of haemocompatibility of biomaterials by hemolysis studies
- 3: Measurement of torque required to tap and screwing in jaw bone.
- 4: Determination of moment of inertia of human limb using dynamometer.

COURSE OUTCOMES:

- CO1:** Analyze different types of materials and apply in designing a device.
- CO2:** Select the materials for designing an implants in tissue replacement.
- CO3:** To get the clear understanding of application of mechanics in medicine.
- CO4:** To study the properties of blood, bone and soft tissues like articular cartilage tendons and ligaments
- CO5:** Acquired a conceptual and theoretical framework of the design, development, and implementation of orthopedic implants.

Avg	(11/5)=2.2	(9/5)=1.8	(9/5)=1.8	(6/5)=1.2	(8/5)=1.6	(5/5)=1

COURSE OBJECTIVES:

- To understand the fundamentals of medical image processing techniques.
- To understand the basic concepts of image enhancement, image restoration, morphological image processing, image segmentation, feature recognition in medical images
- To provide information about various medical imaging modalities
- To provide information about classification and image visualization in medical image processing projects.
- To familiarize the student with the image processing facilities in Matlab, Python and openCV

UNIT I FUNDAMENTALS OF IMAGE PROCESSING 9

Image perception, MTF of the visual system, Image fidelity criteria, Image model, Image sampling and quantization – two dimensional sampling theory, Image quantization, Optimum mean square quantizer, Image transforms – 2D-DFT and other transforms. DFT, DCT, KLT, SVD

UNIT II MEDICAL IMAGE ENHANCEMENT AND RESTORATION 9

Image Enhancement operation, Noise distributions, Spatial averaging, Directional Smoothing, Median, Geometric mean, Harmonic mean, Contra harmonic mean filters, Homomorphic filtering, Color image enhancement. Image Restoration - degradation model, Unconstrained and constrained restoration, Inverse filtering- Wiener filtering

UNIT III MEDICAL IMAGE REPRESENTATION 9

Pixels and voxels – algebraic image operations - gray scale and color representation- depth-color and look up tables - image file formats- DICOM- other formats- Analyze 7.5, NifTI and Interfile, Image quality and the signal to noise ratio

UNIT IV MEDICAL IMAGE ANALYSIS AND CLASSIFICATION 9

Image segmentation- pixel based, edge based, region based segmentation. Image representation and analysis, Feature extraction and representation, Statistical, Shape, Texture, feature and image classification – Statistical, Rule based, Neural Network approaches

UNIT V IMAGE REGISTRATIONS AND VISUALIZATION 9

Image Registration: Rigid body transformation – Affine transformation, Principal axes registration, Iterative principal axes registration, Feature based registration, Elastic deformation based registration, Registration of Images from Different modalities, Evaluation of Registration Methods. **Image visualization:** 2-D display methods, 3-D display methods, surface and volume based 3-D display methods – Surface Visualization and Volume visualization, 3-D Echocardiography, 3D+time Echocardiography, virtual reality based interactive visualization.

45 PERIODS**PRACTICAL EXERCISES:****30 PERIODS**

The following experiments should be performed in OpenCV / Python / Scilab / Matlab Octave / other Open source software.

LIST OF EXPERIMENTS

1. Preprocessing of medical images
2. Filtering of medical images.

3. Edge detection using Python
4. Segmentation of ROI in medical images.
5. Feature extraction in medical images
6. Steganography using OpenCV.
7. Medical image fusion.
8. Statistical analysis of features
9. Neural network based classification.

COURSE OUTCOMES:

Upon Completion of the course, the students should be able to:

- CO1:** Apply basic medical image processing algorithms
- CO2:** Image pre-processing applications that incorporates different concepts of filters for medical Image Processing and reconstruction of an image
- CO3:** Describe the image representation model
- CO4:** Analysis of image segmentation, feature extraction and image classification
- CO5:** Explore the knowledge in image registration and visualization and possibility of applying Image processing concepts in modern hospitals

COURSE OBJECTIVES:

- To introduce the concept of machine learning
- To learn and apply neural networks for pattern classification and regression problems
- To introduce the ideas of fuzzy sets, fuzzy logic
- To familiarize with genetic algorithms for seeking global optimum in self-learning situations
- To introduce the Deep learning concept for medical image analysis

UNIT I INTRODUCTION TO MACHINE LEARNING 9

Machine Learning – Basic Concepts in Machine Learning – Types of Machine Learning – Examples of Machine Learning – Applications – Linear Models for Regression – Linear Basis Function Models – The Bias-Variance Decomposition – Bayesian Linear Regression – Dimensionality Reduction.

UNIT II NEURAL NETWORKS 9

Biological Neurons and their Artificial models, Learning Rules, Single Layer Perceptron Classifiers., Back Propagation Network, generalized delta rule, Associative Memory, Adaptive Resonance Theory (ART) Network Descriptions

UNIT III FUZZY LOGIC SYSTEMS 9

Fuzzy Logic System: Basic of fuzzy logic theory, crisp and fuzzy sets, Basic set operation like union, intersection, complement, T-norm, T-conorm, fuzzy relations, fuzzy if-then rules, fuzzy reasoning, Neuro-Fuzzy Modeling: Adaptive Neuro-Fuzzy Inference System (ANFIS), ANFIS architecture, Hybrid Learning Algorithm

UNIT IV EVOLUTIONARY COMPUTATION & GENETIC ALGORITHMS 9

Evolutionary Computation (EC) – Features of EC – Classification of EC – Advantages – Applications. Genetic Algorithms: Introduction – Biological Background – Operators in GA-GA Algorithm – Classification of GA – Applications

UNIT V ADVANCES AND APPLICATIONS 9

Support Vector Machines, RBF Network. Introduction to Deep Learning – Convolutional Neural Network. Case Study – Neural Network based Classification of Biosignal and Medical Images.

45 PERIODS
30 PERIODS

PRACTICAL EXERCISES:

1. Implement Simple Programs like vector addition in TensorFlow.
2. Implement a simple problem like regression model in Keras.
3. Implement a perceptron in TensorFlow/Keras Environment.
4. Implement a Feed-Forward Network in TensorFlow/Keras.
5. Implement an Image Classifier using CNN in TensorFlow/Keras.
6. Develop an abnormal detection system for bio signal data using fuzzy logic.
7. Develop a system to implement Neural Networks techniques to define predictive models for Abnormal detection.
8. Develop a system that can optimize the solution of the abnormal detection system developed by fuzzy logic
9. Implement a biosignal/medical image Classifier using CNN.

COURSE OUTCOMES:**On completion of this course the student will be able to:****CO1:** Identify and describe machine learning techniques and their roles in building intelligent system**CO2:** Design neural networks for pattern classification and regression problems**CO3:** Apply fuzzy logic and reasoning to handle uncertainty and solve engineering problems.**CO4:** Apply genetic algorithms to optimization problems.**CO5:** Apply Deep learning concept for biomedical signal analysis and Medical image analysis**TOTAL:75 PERIODS****REFERENCES**

COURSE OBJECTIVES:

- To understand various voltage protection circuits
- To understand data acquisition and displaying systems.
- To gain knowledge about EEG multi channel acquisition.
- To gain knowledge about various noise cancellation systems. .
- To understand the interfacing mechanism of DSP.

LIST OF EXPERIMENTS:

1. Simulation of over voltage protection circuit
2. Simulation of under voltage protection circuit
3. Simulation of instrumentation amplifier
4. Accelerometer data acquisition and displaying system
5. Multichannel data acquisition for EEG recording
6. Simulation of switched capacitor system
7. Modeling and simulation of internal noise cancellation circuit.
8. Cross talk cancellation system
9. Serial Interfacing to DSP
10. Parallel interfacing to DSP

TOTAL:60 PERIODS**COURSE OUTCOMES:**

- Design and develop voltage protection circuits.
- Develop data acquisition displaying system.
- Attain knowledge in EEG multi channel acquisition method.
- Design noise cancellation system
- Develop the interfacing mechanism using DSP.

In this course, students will develop their scientific and technical reading and writing skills that they need to understand and construct research articles. A term paper requires a student to obtain information from a variety of sources (i.e., Journals, dictionaries, reference books) and then place it in logically developed ideas. The work involves the following steps:

1. Selecting a subject, narrowing the subject into a topic
2. Stating an objective.

3. Collecting the relevant bibliography (atleast 15 journal papers)
4. Preparing a working outline.
5. Studying the papers and understanding the authors contributions and critically analysing each paper.
6. Preparing a working outline
7. Linking the papers and preparing a draft of the paper.
8. Preparing conclusions based on the reading of all the papers.
9. Writing the Final Paper and giving final Presentation

Please keep a file where the work carried out by you is maintained.

Activities to be carried out

Activity	Instructions	Submission week	Evaluation
Selection of area of interest and Topic	You are requested to select an area of interest, topic and state an objective	2 nd week	3 % Based on clarity of thought, current relevance and clarity in writing
Stating an Objective			
Collecting Information about your area & topic	<ol style="list-style-type: none"> 1. List 1 Special Interest Groups or professional society 2. List 2 journals 3. List 2 conferences, symposia or workshops 4. List 1 thesis title 5. List 3 web presences (mailing lists, forums, news sites) 6. List 3 authors who publish regularly in your area 7. Attach a call for papers (CFP) from your area. 	3 rd week	3% (the selected information must be area specific and of international and national standard)
Collection of Journal papers in the topic in the context of the objective – collect 20 & then filter	<ul style="list-style-type: none"> • You have to provide a complete list of references you will be using- Based on your objective -Search various digital libraries and Google Scholar • When picking papers to read - try to: <ul style="list-style-type: none"> • Pick papers that are related to each other in some ways and/or that are in the same field so that you can write a meaningful survey out of them, • Favour papers from well-known journals and conferences, • Favour “first” or “foundational” papers in the field (as indicated in other people’s survey paper), • Favour more recent papers, • Pick a recent survey of the field so you can quickly gain an overview, 	4 th week	6% (the list of standard papers and reason for selection)

	<ul style="list-style-type: none"> Find relationships with respect to each other and to your topic area (classification scheme/categorization) Mark in the hard copy of papers whether complete work or section/sections of the paper are being considered 		
Reading and notes for first 5 papers	<p>Reading Paper Process</p> <ul style="list-style-type: none"> For each paper form a Table answering the following questions: What is the main topic of the article? What was/were the main issue(s) the author said they want to discuss? Why did the author claim it was important? How does the work build on other's work, in the author's opinion? What simplifying assumptions does the author claim to be making? What did the author do? How did the author claim they were going to evaluate their work and compare it to others? What did the author say were the limitations of their research? What did the author say were the important directions for future research? <p>Conclude with limitations/issues not addressed by the paper (from the perspective of your survey)</p>	5 th week	8% (the table given should indicate your understanding of the paper and the evaluation is based on your conclusions about each paper)
Reading and notes for next 5 papers	Repeat Reading Paper Process	6 th week	8% (the table given should indicate your understanding of the paper and the evaluation is based on your conclusions about each paper)
Reading and notes for final 5 papers	Repeat Reading Paper Process	7 th week	8% (the table given should indicate your understanding of the paper and the evaluation is based on your conclusions about

			each paper)
Draft outline 1 and Linking papers	Prepare a draft Outline, your survey goals, along with a classification / categorization diagram	8 th week	8% (this component will be evaluated based on the linking and classification among the papers)
Abstract	Prepare a draft abstract and give a presentation	9 th week	6% (Clarity, purpose and conclusion) 6% Presentation & Viva Voce
Introduction Background	Write an introduction and background sections	10 th week	5% (clarity)
Sections of the paper	Write the sections of your paper based on the classification / categorization diagram in keeping with the goals of your survey	11 th week	10% (this component will be evaluated based on the linking and classification among the papers)
Your conclusions	Write your conclusions and future work	12 th week	5% (conclusions – clarity and your ideas)
Final Draft	Complete the final draft of your paper	13 th week	10% (formatting, English, Clarity and linking) 4% Plagiarism Check Report
Seminar	A brief 15 slides on your paper	14 th & 15 th week	10% (based on presentation and Viva-voce)

TOTAL: 30 PERIODS

BM4001

DIAGNOSTIC AND THERAPEUTIC EQUIPMENT

L T P C

3 0 0 3

COURSE OBJECTIVES:

- To study the measurement of various biopotential and non-electrical parameters.
- To explore the various functional blocks present in cardiac care units and various assist devices
- To develop an understanding of the physiotherapy and diathermy equipment
- To study the electrical safety in the hospital environment

UNIT I	BIO POTENTIAL RECORDING	9
Cell Potential-Half-cell potential, Electrodes-types of electrodes, Signal Conditioning circuits- Characteristics of Amplifiers, Differential Amplifiers, Filters, Isolation Amplifier, Design concepts. ECG, EEG, EMG, PCG, EOG, lead system and recording methods, typical waveform, frequency spectrum, abnormal waveforms. Evoked response.		
UNIT II	MEASUREMENT OF NON ELECTRICAL PARAMETER	9
Measurements of Respiration Rate, Temperature, Pulse rate, Blood pressure Measurements- Direct, Indirect. Blood flow Measurements – In vitro, In vivo, Gas flow measurements. Lung volume measurement – Spirometer.		
UNIT III	CARDIAC CARE UNITS	9
Pace makers - different types, batteries for pace makers, Design Concept. DC defibrillators, asynchronous and synchronous types, patient monitoring system, principles of bio telemetry.		
UNIT IV	ASSIST DEVICES	9
Heart Lung Machine-Condition to be satisfied by the H/L System. Different types of Oxygenators, Pumps, Pulsatile and Continuous Types, Monitoring Process. Hemodialyser- Indication and Principle of Hemodialysis, Membrane, Dialysate, Different types of hemodialysers, Monitoring Systems, Wearable Artificial Kidney, Implanting Type. Respiratory aids- Types of Ventilators – Pressure, Volume, and Time controlled.		
UNIT V	DIATHERMY, STIMULATOR AND PATIENT SAFETY	9
Diathermy-Physiological effects of HF radiation, Depth of Penetration, short wave, Ultrasonic and microwave diathermy, Surgical diathermy, Hazards and safety procedures. Medical Stimulators – Intensity Duration Curve, Current waveforms - Galvanic, Faradic, surged faradic, exponential, biphasic, TENS, Interferential therapy. Electrical Safety-Leakage current, Micro and macro electric shock, GFI units, Earthing Scheme, Electrical safety Analyser		

TOTAL: 45 PERIODS

COURSE OUTCOMES:

Upon completion of this course the student will be able to

- CO1:** Design and analyze the bioamplifiers.
- CO2:** Measure vital and non-electrical parameters
- CO3:** Design and demonstrate the pacemaker and defibrillator.
- CO4:** Demonstrate the function of assist devices.
- CO5:** Design stimulators and test the electrical safety of medical equipment in the hospital environment.

COURSE OBJECTIVES:

- To learn the basics of rehabilitation engineering
- To study about principle of rehabilitation engineering
- To understand different types of Therapeutic Exercise Technique.
- To understand the tests to assess the hearing loss and development techniques of electronic devices for visually and auditory impaired
- To study about various orthopaedic devices and prosthetic devices

UNIT I INTRODUCTION TO REHABILITATION 9

Rehabilitation: Epidemiology of Rehabilitation, Health, Levels of Prevention, Preventive Rehabilitation, Diagnosis of Disability, Functional Diagnosis, Importance of Psychiatry in Functional diagnosis, Impairment disability handicap, Primary & secondary Disabilities, Rehabilitation team Classification of members, The Role of Psychiatrist, Occupational therapist, Physical therapist, Recreation therapist, Prosthetist - Orthotist, Speech pathologist, Rehabilitation nurse, Social worker, Corrective therapist, Psychologist, Music therapist, Dance therapist & Biomedical engineer

UNIT II PRINCIPLE OF REHABILITATION 9

Introduction, The Human Component, Principles of Assistive Technology Assessment, Principles of Rehabilitation Engineering- Key Engineering Principles, Key Ergonomic Principles - Practice of Rehabilitation and Assistive Technology.

UNIT III THERAPEUTIC EXERCISE TECHNIQUE 9

Co-ordination exercises, Frenkels exercises, Gait analyses-Pathological Gaits, Gait Training, Relaxation exercises-Methods for training Relaxation, Strengthening exercises-Strength training, Types of Contraction, Mobilisation exercises, Endurance exercises.

UNIT IV MANAGEMENT OF COMMUNICATION & VIRTUAL REALITY 9

Impairment-introduction to communication, Aphasia, Types of aphasia, Treatment of aphasic patient, Augmentative communication-general form of communication, types of visual aids, Hearing aids, Types of conventional hearing aid, Writing aids. Introduction to virtual reality, Virtual reality based rehabilitation, Hand motor recovery systems with Phantom haptics, Robotics and Virtual Reality Applications in Mobility Rehabilitation.

UNIT V ORTHOTIC, PROSTHETIC DEVICES & RESTORATION TECHNIQUES 9

General orthotics, Classification of orthotics-functional & regional, General principles of Orthosis, Calipers- FO, AFO, KAFO, HKAFO. Prosthetic devices: Hand and arm replacement, Body powered prosthetics, Myoelectric controlled prosthetics and Externally powered limb prosthetics. Functional Electrical Stimulation systems-Restoration of hand function, restoration of standing and walking, Hybrid Assistive Systems (HAS).

COURSE OUTCOMES:

CO1: Explain the fundamentals of rehabilitation and rehabilitation team members.

CO2: Describe the key engineering principles of rehabilitation and assistive technology.

CO3: Apply the types of therapeutic exercises to benefit the society

CO4: Design and apply different types Hearing aids, visual aids and their application in biomedical field and hence the benefit of the society.

CO5: Explain engineering concepts in Virtual reality based rehabilitation devices

CO6: Identify prosthetic and orthotic devices for restoration of limb function

TOTAL :45 PERIODS

MEDICAL OPTICS

**L T P C
3 0 0 3**

COURSE OBJECTIVES:

- To understand various optical properties of tissue
- To gain the knowledge of photonics instruments
- To know the engineering and practical applications of optics related to diagnostics applications
- To acquire knowledge about therapeutic and surgical applications of lasers in medical fields
- To gain the knowledge of fiber optic sensors used In medical application

UNIT I OPTICAL PROPERTIES OF THE TISSUES

9

Optical properties of tissue- melanin, bilirubin, tissue and their spectrum, optical characteristics of constituents of blood – RBC, hemoglobin properties, plasma, oxygenated and deoxygenated hemoglobin, Laser tissue Interaction-Chemical, Thermal, Electromechanical. Photo ablative processes. Laser safety procedures

UNIT II INSTRUMENTATION IN PHOTONICS 9

Review of basic properties of light – Reflection, Refraction, Scattering, fluorescence and phosphorescence. Instrumentation for absorption, scattering and emission measurements. Optical sources – high pressure arc lamps, LEDs, Medical Lasers. Optical filters. Optical detectors - Time resolved and phase resolved detectors, optical tweezers

UNIT III DIAGNOSTIC APPLICATIONS 9

Wood's lamp, Imaging techniques - Optical coherence tomography, Elastography, Fluorescence Imaging, Raman Imaging, FLIM, FRAP, NIRS-Application, X-Ray Diagnostic Techniques, Speckle Correlometry, Near-Field Imaging in Biological and Biomedical Applications

UNIT IV THERAPEUTIC AND SURGICAL APPLICATIONS OF LIGHT 9

Phototherapy, Photodynamic therapy (PDT) - Principle and mechanism - Oncological and non-oncological applications of PDT - Biostimulation effect – applications. Laser in tissue welding, lasers in dermatology, lasers in ophthalmology, otolaryngology, urology, neurology, orthopedics, gastroenterology.

UNIT V FIBER OPTIC SENSORS AND APPLICATIONS 9

Light transport in the optical fiber - Total internal reflection, Numerical aperture, Angle of acceptance. losses in fiber, Optical sensors based on polarization, magnetic sensors, Medical applications of fiber optic sensors in measuring temperature, pressure, flow and chemical activities

COURSE OUTCOMES:

On completion of this course the student will be able to:

CO1: Understand various optical properties of tissue

CO2: Describe the photonics instruments

CO3: Know the diagnostic applications of lasers in medical fields

CO4: Explain the therapeutic and surgical applications of lasers in medical fields

CO5: Describe the types of fiber optic sensors used in medical application

TOTAL:45 PERIODS

COURSE OBJECTIVES:

- To know the principle and design of Heart lung machine and artificial heart
- To acquire knowledge of various cardiac assist devices,
- To study implantation of artificial kidney
- To understand the principle of prosthetic and orthotic devices for the disability
- To Gain knowledge in respiratory devices and hearing aids

UNIT I HEART LUNG MACHINE AND ARTIFICIAL HEART 9

Condition to be satisfied by the H/L System. Different types of Oxygenators, Pumps, Pulsatile and Continuous Types, Monitoring Process, Shunting, The Indication for Cardiac Transplant, Driving Mechanism, Blood Handling System, Functioning and different types of Artificial Heart, Mock test setup for assessing its Functions

UNIT II CARDIAC ASSIST DEVICES 9

Synchronous Counter pulsation, Assisted through Respiration Right Ventricular Bypass Pump, Left Ventricular Bypass Pump, Open Chest and closed Chest type, Intra Aortic Balloon Pumping Venous Arterial Pumping, Prosthetic Cardiac Valves, Principle and problem, Biomaterials for implantable purposes, its characteristics and testing.

UNIT III ARTIFICIAL KIDNEY 9

Indication and Principle of Haemodialysis, Membrane, Dialysate, Different types of hemodialyzers, Monitoring Systems, Wearable Artificial Kidney, Implanting Type

UNIT IV PROSTHETIC AND ORTHOTIC DEVICES 9

Spinal orthotics and Prosthesis, Splint – Static and Dynamic. Hand and Arm Replacement - Different Types of Models Externally Powered Limb Prosthesis, Intelligent prosthesis, Lower Limb and Upper limb orthotic devices, Functional Electrical Stimulation, Sensory Assist Devices, Materials for Prosthetic and orthotic devices, Haptic Devices, Transcutaneous electrical nerve stimulator.

UNIT V RESPIRATORY AND HEARING AIDS 9

Ventilator and its types-Intermittent positive pressure, Breathing Apparatus Operating Sequence, Electronic IPPB unit with monitoring for all respiratory parameters. Types of Deafness, Hearing Aids, Construction and Functional Characteristics

TOTAL :45 PERIODS**COURSE OUTCOMES:**

CO1: Knowledge about the importance of Heart lung machine and artificial Heart

CO2: Knowledge about the importance of different types of assist devices and related issues

CO3: Understand about the implantation of artificial kidney

CO4: Explore the different types of models for Prosthetic and orthotic purpose

CO5: Perceive the knowledge in different types of respiratory and hearing aids

MICRO AND NANO FLUIDS

L T P C
3 0 0 3

COURSE OBJECTIVES:

- To develop a broad and deep understanding of transport phenomena at the micro/nanoscale
- To understand major applications of micro/nanofluidics
- To understand major methods to fabricate micro/nanofluidic devices
- To be able to design and test new micro/nanofluidic devices for certain applications
- To understand the process of nano fluid preparation

UNIT I INTRODUCTION

9

Microfluidics: Introduction, Benefits of size reduction, Benefits of automation and integration, Application areas; PDMS microfluidics:PDMS microvalve architectures, elastomeric microfluidic valve, Multilayer device fabrication. Nano fluids: Properties of nanofluids; thermophysical characteristics of nanofluids; Experimental methods of preparation of nano fluids; Theoretical models for thermal conductivity of nanofluids..

UNIT II BASIC PRINCIPLES OF MICROFLUIDICS

9

Laminar flow, Peclet number, Pressure driven flow, Electroosmotic flow, Micropumps: Peristaltic pump, Centrifugal pump, Electrokinetic pump, Magneto-hydro dynamic pump; Micromixers: Active micromixers, Passive micromixers; Soft lithography. Detection methods;

UNIT III MICROFLUIDICS IN BIOMEDICAL RESEARCH

9

Impact of microfluidics on biomedical research; microfluidics concepts: Laminar versus turbulent flow, Surface and interfacial tension, Capillary forces; Chemotaxis: Introduction, Agar-plate techniques, Two-chamber techniques, Boyden chamber, Capillary techniques; Microfluidic device fabrication; Diagnostics for low-resource settings; Organ-on-a-chip; Biomimetic blood vessel and capillary networks..

UNIT VI MICRO AND NANO EMULSIONS

9

Emulsion: Properties, Emulsifiers, Mechanisms of emulsification; Microemulsions: Definition, types, Interaction energies, Packing parameter, structures, Hydrophilic-Lipophilic Balance, Phase Inversion Temperature; Surfactant film properties: Ultra-low interfacial tension, Spontaneous curvature; Nano emulsions: Preparation, Droplet size control, Destabilization mechanisms, Controlling stability of nanoemulsions, Applications.

UNIT V NANOFUID PREPARATION**9**

Preparation of non-metallic nanofluids: Aluminum nitride nanofluids, Zinc oxide, Titanium dioxide, Carbon nanotube; Preparation of metallic nanofluids: Gold & silver-nanofluids, Copper-nanofluids. Applications of nanofluids: Heat Transfer, Industrial Cooling, Nuclear Reactors, Automotive, Cooling of Microchips, Drug delivery, Sensing and Imaging, Nanofluid Detergent.

COURSE OUTCOMES:**CO1:** Understand the basic principles of micro and nano fluids**CO2:** Understand the synthesis advantages and importance of micro and Nano fluids**CO3:** Ability to analyze fluid flow in micro and nano-size devices.**CO4:** Understand the concepts and Applications of micro- and nanofabrication**CO5:** Understand commercialization Issues of Micro-Nano Technology**TOTAL: 45 PERIODS****REFERENCES**

BM4072**MEDICAL DEVICE STANDARDS AND REGULATION****L T P C****3 0 0 3****COURSE OBJECTIVES:**

- Understand standards and safety aspects of medical devices.
- Understand the hospital safety standards and maintenance.
- Describe the medical equipment safety standards.
- Describe medical device regulations
- Describe medical device risk assessment and regulatory requirements.

UNIT I STANDARDS AND SAFETY**9**

Quality management system for medical devices (ISO 9001 and ISO13485), safety and standardization for risk management (ISO 14971), European standard conformity (CE marking), FDA guidelines for medical devices approval and classification based on risk assessment

UNIT II HOSPITAL SAFETY STANDARDS 9

Life Safety Standards- Protecting Occupants, Protecting the Hospital From Fire, Smoke, and Heat, Protecting Individuals From Fire and Smoke, Providing and Maintaining Fire Alarm Systems, Systems for Extinguishing Fires Environment of Care Standards-Minimizing EC Risks, Smoking Prohibitions, Managing Hazardous Material and Waste, Maintaining Fire Safety Equipment, Features, Testing, Maintaining, and Inspecting Medical Equipment.

UNIT III MEDICAL EQUIPMENT ESSENTIAL REQUIREMENTS 9

General requirements for basic safety & essential performance of medical equipment, IEC 60601 standards- Base Standard-general requirement of electrical medical devices, Collateral Standards- EMC radiation protection & programmable medical device system, Particular Standards-type of medical device.

UNIT IV MEDICAL DEVICE REGULATION 9

Medical device and in vitro diagnostics: Introduction & types of devices including combination devices. Medical Device Rules, 2017: Implications on medical devices. Classification of medical devices. Labelling of medical devices and in vitro diagnostics

UNIT V MEDICAL DEVICE RISK ASSESSMENT 9

Inspection of medical device and IVD establishments. ISO 14971 (Medical devices: Application of risk management to medical devices). Regulatory requirements of biocompatibility of medical devices and ISO 10993. Clinical investigation of medical devices, regulation of investigational medical devices. Medical device regulation: International practices.

COURSE OUTCOMES:

On completion of this course the student will be able to:

CO1: Describe the key point in standard and safety of medical devices

CO2: Introduce the students with the knowledge of hospital safety and standards.

CO3: Introduce the students with the knowledge of essential requirements in medical equipments

CO4: Introduce device regulation and its types.

CO5: Acquire knowledge medical device risk assessment.

COURSE OBJECTIVES:

- To teach the key principles for telemedicine and health.
- To make student understand telemedical technology.
- To introduce the students with the knowledge of telemedical standards
- To design and develop m-Health platforms for telemedical applications. diagnosis
- To make student understand the applications of health care sectors

UNIT I TELEMEDICINE AND HEALTH 9

History and Evolution of telemedicine, Functional diagram of telemedicine system, Telemedicine, Tele health, Tele care, Organs of telemedicine, Global and Indian scenario, International regulations in e-health and telemedicine, Ethical and legal aspects of Telemedicine - Confidentiality, Social and legal issues, Safety and regulatory issues, Advances in Telemedicine.

UNIT II TELEMEDICAL TECHNOLOGY 9

Principles of Multimedia - Text, Audio, Video, data, Data communications and networks, PSTN, POTS, ANT, ISDN, Internet, Air/ wireless communications: GSM satellite, and Micro wave, Modulation techniques, Types of Antenna, Integration and operational issues, Communication infrastructure for telemedicine – LAN and WAN technology. Satellite communication. Mobile hand held devices and mobile communication. Internet technology and telemedicine using world wide web (www). Video and audio conferencing. Clinical data –local and centralized

UNIT III TELEMEDICAL STANDARDS SECURITY AND LEGAL ISSUES 9

Data Security and Standards: Encryption, Cryptography, Mechanisms of encryption, phases of Encryption. Protocols: TCP/IP, ISO-OSI, Standards to followed DICOM, HL7, H. 320 series (Video phone based ISBN) T. 120, H.324 (Video phone based PSTN), Video Conferencing, Realtime Telemedicine integrating doctors / Hospitals, Clinical laboratory data, Radiological data, and other clinically significant biomedical data, Administration of centralized medical data, security and confidentiality of medical records and access control, Cyber laws related to telemedicine.

UNIT IV m-HEALTH AND TELEMEDICINE 9

Mobile Devices : Smart phones, Tablet PCs, iPads, PDAs, Wearable computers – m-Health technology and communication infrastructure - Healthcare Apps – m-Health applications: Education and awareness, Remote data collection, Remote monitoring, Communication and training for healthcare workers, Disease and epidemic outbreak tracking, Diagnostic and treatment support – m-Health and the Transformation of Clinical Trials - Harnessing data, advanced analytics, and the Internet of Things to optimize digitized clinical trials

UNIT V TELEMEDICAL APPLICATIONS 9

Telemedicine access to health care services – health education and self-care. · Introduction to robotics surgery, telesurgery. Telecardiology, Teleoncology, Telemedicine in neurosciences, Electronic Documentation, e-health services security and interoperability., Telemedicine access to health care services– health education and self-care, Business aspects - Project planning and costing, Usage of telemedicine. Telemedicine and in loco assistance of patients, Interactive videoconferencing consults, Store and forward consults, Remote monitoring and home care.

COURSE OUTCOMES:**On completion of this course the student will be able to:****CO1:** Describe the key principles for telemedicine and health**CO2:** Understand telemedical technology**CO3:** Introduce the students with the knowledge of telemedical standards**CO4:** Design and develop m-Health platforms for telemedical applications**CO5:** Acquire knowledge of evaluating the force in implants.**TOTAL:45 PERIODS****REFERENCES**

MX4073**MEDICAL ROBOTICS****L T P C****3 0 0 3****COURSE OBJECTIVES:**

- To explain the basic concepts of robots and types of robots
- To discuss the designing procedure of manipulators, actuators and grippers
- To impart knowledge on various types of sensors and power sources
- To explore various applications of Robots in Medicine
- To impart knowledge on wearable robots

UNIT I INTRODUCTION TO ROBOTICS 9

Introduction to Robotics, Overview of robot subsystems, Degrees of freedom, configurations and concept of workspace, Dynamic Stabilization

Sensors and Actuators

Sensors and controllers, Internal and external sensors, position, velocity and acceleration sensors, Proximity sensors, force sensors Pneumatic and hydraulic actuators, Stepper motor control circuits, End effectors, Various types of Grippers, PD and PID feedback actuator models

UNIT II MANIPULATORS & BASIC KINEMATICS 9

Construction of Manipulators, Manipulator Dynamic and Force Control, Electronic and pneumatic manipulator, Forward Kinematic Problems, Inverse Kinematic Problems, Solutions of Inverse Kinematic problems

Navigation and Treatment Planning

Variable speed arrangements, Path determination – Machinery vision, Ranging – Laser – Acoustic, Magnetic, fiber optic and Tactile sensor

UNIT III SURGICAL ROBOTS 9

Da Vinci Surgical System, Image guided robotic systems for focal ultrasound based surgical applications, System concept for robotic Tele-surgical system for off-pump, CABG surgery, Urologic applications, Cardiac surgery, Neuro-surgery, Pediatric and General Surgery, Gynecologic Surgery, General Surgery and Nanorobotics. Case Study

UNIT IV REHABILITATION AND ASSISTIVE ROBOTS 9

Pediatric Rehabilitation, Robotic Therapy for the Upper Extremity and Walking, Clinical-Based Gait Rehabilitation Robots, Motion Correlation and Tracking, Motion Prediction, Motion Replication. Portable Robot for Tele rehabilitation, Robotic Exoskeletons – Design considerations, Hybrid assistive limb. Case Study

UNIT V WEARABLE ROBOTS 9

Augmented Reality, Kinematics and Dynamics for Wearable Robots, Wearable Robot technology, Sensors, Actuators, Portable Energy Storage, Human-robot cognitive interaction (cHRI), Human-robot physical interaction (pHRI), Wearable Robotic Communication - case study

TOTAL: 45 PERIODS

COURSE OUTCOMES:

- CO1:** Describe the configuration, applications of robots and the concept of grippers and actuators
- CO2:** Explain the functions of manipulators and basic kinematics
- CO3:** Describe the application of robots in various surgeries
- CO4:** Design and analyze the robotic systems for rehabilitation
- CO5:** Design the wearable robots

WEARABLE TECHNOLOGIES

L T P C
3 0 0 3

COURSE OBJECTIVES:

- Identify the motivation, guiding principles, and challenges of Wearable Computing.
- Develop skills pertaining to the design of a holistic interactive wearable system comprising of the physical, digital, and the human aspects.
- To provide the basic understanding of measurement and instrumentation systems and the insight of the resistive sensors and its applications in real life..
- To introduce the concept of the reactive sensors and self-generating sensors and its applications in real life
- To impart the importance of smart sensors, sensor interface standards for wearable device applications and to provide a brief overview of the wearable technology and its impact on social life

UNIT I INTRODUCTION

9

Attributes of wearables, Meta-wearable, Challenges and opportunities, Future of wearables - Social aspects of wearability and interaction: Social interpretation of Aesthetics - Case study: Google glass - Wearable haptics: Need for wearable haptic devices - Categories of wearable haptic and tactile display – Wearable sensorimotor enhancer.

UNIT II WEARABLE SENSORS

9

Chemical and Biochemical sensors, System design, Challenges in chemical Bio-chemical sensing, Application areas - Inertia sensors, Parameters from inertia sensors - Applications for wearable motion sensors - Measurement of energy expenditure by body worn heat flow sensors.

UNIT III FLEXIBLE ELECTRONICS**9**

Introduction, Thin-film transistors: Materials and Technologies, Review of Semi-conductors in flexible electronics - Low-power Integrated Circuit Design for Bio-potential sensing: Analog circuit design techniques - Low-power design for ADCs - Digital circuit design techniques - Architectural design for low-power bio-potential acquisition, Practical considerations.

UNIT IV ENERGY HARVESTING SYSTEMS**9**

Energy harvesting from human body: Temperature gradient, Foot motion - Wireless energy transmission - Energy harvesting from light and RF energy - Energy and power consumption issues, Future considerations.

UNIT V MONITORING PHYSICAL AND PHYSIOLOGICAL PARAMETERS**9**

Wearable sensors for physiological signal measurement - Physical measurement: Cardiovascular diseases, Neurological diseases, Gastrointestinal diseases - Wearable and non-invasive assistive technologies: Assistive devices for individuals with severe paralysis, Wearable tongue drive system, Sensor signal-processing algorithm, Dual-mode tongue drive system.

COURSE OUTCOMES:

CO1: Understand the fundamentals of wearables, wearable design issues and user interfaces

CO2: Identify the different types of sensors used in wearable devices

CO3 : Recognize the materials used in the field of flexible electronics technology and its power constraints

CO4: Summarize the techniques and issues associated with energy harvesting from human body

CO5: Elucidate the applications of wearable technology in health care

Avg	(10/4)=2.5	(7/5)=1.4	(10/5)=2	(8/5)=1.6	(1/1)=1	(9/4)=2.25

COURSE OBJECTIVES:

- Achieve familiarity with some basic ethical frameworks & understand how these ethical frameworks can help us to think through contemporary questions in medical ethics.
- Students will be able to know about the legal and ethical principles
- To apply these principles in health care settings & gain knowledge about the medical standards that are to be followed in hospitals.

UNIT I INTRODUCTION TO MEDICAL ETHICS 8

Definition of Medical ethics, Scope of ethics in medicine, American Medical Association code of ethics, CMA code of ethics- Fundamental Responsibilities, The Doctor and The Patient, The Doctor and The Profession, Professional Independence, The Doctor and Society.

UNIT II ETHICAL THEORIES & MORAL PRINCIPLES 9

Theories-Deontology & Utilitarianism, Casuist theory, Virtue theory, The Right Theory. Principles- Non- Maleficence, Beneficence, Autonomy, Veracity, Justice. Autonomy & Confidentiality issues in medical practice, Ethical Issues in biomedical research, Bioethical issues in Human Genetics & Reproductive Medicine

UNIT III HOSPITAL ACCREDITATION STANDARDS 9

Accreditation- JCI Accreditation & its Policies. Patient Organization management standards.

UNIT IV HOSPITAL SAFETY STANDARDS 10

Life Safety Standards- Protecting Occupants, Protecting the Hospital from Fire, Smoke, and Heat, Protecting Individuals from Fire and Smoke, Providing and Maintaining Fire Alarm Systems, Systems for Extinguishing Fires Environment of Care Standards-Minimizing EC Risks, Smoking Prohibitions, Managing Hazardous Material and Waste, Maintaining Fire Safety Equipment, Features, Testing, Maintaining, and Inspecting Medical Equipment.

UNIT V MEDICAL EQUIPMENT SAFETY STANDARDS 9

General requirements for basic safety & essential performance of medical equipment. IEC 60601 standards, Indian and International standards, ISO standards - Base Standard-general requirement of electrical medical devices, Collateral Standards- EMC radiation protection & programmable medical device system, Particular Standards-type of medical device

COURSE OUTCOMES:

On completion of this course the student will be able to:

CO1: Describe the Social responsibility in healthcare systems

CO2: Discuss the Bioethics and engineers role

CO3: Apply Legal and professional guidelines for the hospital accreditation

CO4: Understand hospital safety aspects

CO5: Comprehend the medical equipment safety standards and medical device maintenance.

BRAIN COMPUTER INTERFACE

L T P C
3 0 0 3

COURSE OBJECTIVES:

The objective of this course is to enable the student to

- Understand the basic concepts of brain computer interface.
- Explore the various signal acquisition methods.
- Understand the signal processing methods used in BCI.
- Understand the various machine learning methods of BCI.
- Learn the various applications of BCI.

UNIT I INTRODUCTION TO BCI

8

Introduction - Brain structure and function, Brain Computer Interface Types - Synchronous and Asynchronous -Invasive BCI -Partially Invasive BCI - Non Invasive BCI, Structure of BCI System, BCI Monitoring Hardware, EEG, MEG, fMRI.

UNIT II BRAIN ACTIVATION

9

Brain activation patterns - Oscillatory potential and ERD, Slow cortical potentials, Movement related potentials-Mu rhythms, motor imagery, Stimulus related potentials – Visual Evoked Potentials – P300 and Auditory Evoked Potentials.

UNIT III FEATURE EXTRACTION METHODS

9

Data Processing – Spike sorting, Frequency domain analysis, Wavelet analysis, Time domain analysis, Spatial filtering -Principal Component Analysis (PCA), Independent Component Analysis (ICA), Artefacts reduction, Feature Extraction - Phase synchronization.

UNIT IV MACHINE LEARNING METHODS FOR BCI 9

Classification techniques –Binary classification, Multiclass Classification, Evaluation of classification performance, Regression - Linear, Polynomial, RBF's, Support vector machine, Graph theoretical functional connectivity analysis.

UNIT V APPLICATIONS OF BCI 9

Case Studies - Invasive BCIs: decoding and tracking arm (hand) position, controlling prosthetic devices such as orthotic hands, Cursor and robotic control using multi electrode array implant, Cortical control of muscles via functional electrical stimulation. Ethics of Brain Computer Interfacing.

TOTAL: 45 PERIODS

COURSE OUTCOMES

On successful completion of this course, the student will be able to

- CO1:Evaluate concept of BCI.
- CO2:Describe the different brain activation signals.
- CO3:Select appropriate feature extraction methods.
- CO4:Use machine learning algorithms for translation.
- CO5:Develop high-fidelity BCI prototypes.

	PO1	PO2	PO3	PO4	PO5	PO6
CO1	1		3	2	1	1
CO2	1		3	2	1	1
CO3	2		3	2	1	2
CO4	2		3	2		2
CO5	2		3	2		2
Avg	1.95		3	2	1	1.95

OBJECTIVES:

1. To study the basics of signal representation and Fourier theory
2. To understand Multi Resolution Analysis and Wavelet concepts
3. To study the wavelet transform in both continuous and discrete domain
4. To understand the design of wavelets using Lifting scheme
5. To understand the applications of Wavelet transform

UNIT I FUNDAMENTALS 9

Vector Spaces – Properties– Dot Product – Basis – Dimension, Orthogonality and Orthonormality – Relationship Between Vectors and Signals – Signal Spaces – Concept of Convergence – Hilbert Spaces for Energy Signals- Fourier Theory: Fourier series expansion, Fourier transform, Short time Fourier transform, Time-frequency analysis

UNIT II MULTI RESOLUTION ANALYSIS 9

Definition of Multi Resolution Analysis (MRA) – Haar Basis – Construction of General Orthonormal MRA – Wavelet Basis for MRA – Continuous Time MRA Interpretation for the DTWT – Discrete Time MRA – Basis Functions for the DTWT – PRQMF Filter Banks.

UNIT III CONTINUOUS WAVELET TRANSFORMS 9

Wavelet Transform – Definition and Properties – Concept of Scale and its Relation with Frequency – Continuous Wavelet Transform (CWT) – Scaling Function and Wavelet Functions (Daubechies Coiflet, Mexican Hat, Sinc, Gaussian, Bi Orthogonal)– Tiling of Time – Scale Plane for CWT

UNIT IV DISCRETE WAVELET TRANSFORM 9

Filter Bank and Sub Band Coding Principles – Wavelet Filters – Inverse DWT Computation by Filter Banks – Basic Properties of Filter Coefficients – Choice of Wavelet Function Coefficients – Derivations of Daubechies Wavelets – Mallat's Algorithm for DWT – Multi Band Wavelet Transforms Lifting Scheme- Wavelet Transform Using Polyphase Matrix Factorization – Geometrical Foundations of Lifting Scheme – Lifting Scheme in Z – Domain.

UNIT V APPLICATIONS 9

Wavelet methods for signal processing- Adaptive wavelet techniques in signal acquisition, Detection of signal changes, analysis and classification of audio signals using CWT, Signal and Image compression Techniques: EZW–SPIHT Coding– Image Denoising Techniques: Noise Estimation – Shrinkage Rules – Shrinkage Functions – Edge Detection and Object Isolation, Image Fusion, and Object Detection. Wavelet based signal de-noising and energy compaction, Wavelets in adaptive filtering, Digital Communication and Multicarrier Modulation, Trans multiplexers.

OUTCOMES:

- CO1: Use Fourier tools to analyse signals
 CO2: Gain knowledge about MRA and representation using wavelet bases
 CO3: Acquire knowledge about various wavelet transforms and design wavelet transform
 CO4: Apply wavelet transform for various signal & communication applications
 CO5: Apply wavelet transform for various image processing applications

TOTAL:45 PERIODS

BM4004**HOSPITAL PLANNING, ORGANIZATION AND
MANAGEMENT****L T P C****3 0 0 3****COURSE OBJECTIVES:**

- With an objective of imbibing a professional approach amongst students towards hospital management.
- The subject encompasses management principles, staffing and marketing processes, discussing their significance and role in the effective and efficient management of health care organizations.

UNIT I FORMS OF ORGANISATION**8**

Sole proprietorship, Partnership, Company-public and private sector enterprises, Principles of management, Evolution of management.

UNIT II PRINCIPLE OF HOSPITAL MANAGEMENT**10**

Importance of management and Hospital, Management control systems. Forecasting techniques decision-making process

UNIT III STAFFING**6**

Staffing pattern in hospitals, Selection, Recruiting process, Training of staff, Organizational structures, Career development

UNIT IV MARKETING AND MANAGEMENT**10**

Basic concepts marketing, Principles of social marketing, Social marketing in the health sector, Consumer behavior and research health, Advertising in Health Sector, Relevance of e-marketing of Health care services

UNIT V COMPUTER IN HOSPITAL**11**

System Development life cycle, Reasons to use computers in hospital, main categories of information systems in hospitals

COURSE OUTCOMES:**CO1:** Understand the Roles and types of establishment**CO2:** Discuss the functions of hospital management.**CO3:** Understand the concepts of HR Management practices.**CO4:** Discuss the methods and tools of marketing**CO5:** Understand the impacts of Information technology in hospital management.**TOTAL:45 PERIODS****REFERENCES**

BM4005 HUMAN RESOURCES MANAGEMENT IN HOSPITAL**L T P C
3 0 0 3****COURSE OBJECTIVES:**

- This subject acquaints the students with major functions of HRM aligned with the business strategy.
- The subject encompasses the concept of best fit employee, training & executive development, sustaining employee interest and performance appraisal

UNIT I PERSPECTIVES OF HUMAN RESOURCE MANAGEMENT**9**

Evolution of Human Resource Management - Importance of Human factor, Objectives of Human Resource Management - Human Resource Policies - Need for HRD/HRM in Healthcare Organization - Computer Applications in Human Resource Management.

UNIT II THE CONCEPT OF BEST FIT EMPLOYEE 9

Organizational Job Design - job description - job analysis - job rotation-job evaluation- Man- power planning- Importance of Human Resource Planning, Forecasting of Human Resource Requirements - Selection procedures - test, Validation, Interviews, Recruitment, Medical Examination.

UNIT III TRAINING & EXECUTIVE DEVELOPMENT 9

Types of Training methods and their benefits - Executive development Programme - common practices - Benefits, self-development - knowledge Management.

UNIT IV SUSTAINING EMPLOYEE INTEREST 9

Wage and Salary Administration – the concept of incentives and its operational implications – Participative decision making – Concept of Collective Bargaining – Compensation plans – Rewards – Motivation – Theories of motivation - Grievances and redressal methods.

UNIT V PERFORMANCE APPRAISAL 9

Importance of Performance Appraisal - Methods of Performance Evaluation, - Traditional methods – Modern methods – Feedback – Promotion – Demotion – transfer. Implications of jobs change. The control process, Methods and Requirements of an Effective control system.

COURSE OUTCOMES:

On completion of this course the student will be able to:

CO1: Discuss the scope and significance of HRM.

CO2: Understand the concepts of recruitment and selection process.

CO3: Understand the procedure of training and carrier development.

CO4: Understand the employee conflicts and administrative system

CO5: Discuss the methods and techniques of the appraisal system

TOTAL:45 PERIODS

Avg	(1/1)=1	(2/2)=1	(4/4)=1	(1/1)=1	(7/5)=1.4	(3/3)=1

COURSE OBJECTIVES:

- To expose the students for planning and operation of hospitals in a detailed manner which will include all facts of hospital planning activities covering every department that is involved both in clinical care as well as supportive services.
- To introduce the equipment maintenance management skills and how to protect equipment from electromagnetic interferences.

UNIT I HEALTH SYSTEM**9**

Health organization of the country, the state and cities, health financial system, teaching cum research hospitals, General Hospital, PHC reference system, Ambulatory Care.

UNIT II NATIONAL HEALTH POLICY**9**

Need for evaluating a health policy, need for providing primary health care, health education, health insurance, health legislation, inter-sectoral cooperation.

UNIT III EQUIPMENT MAINTENANCE MANAGEMENT**9**

Organizing the maintenance operation, biomedical equipment procurement procedure, proper selection, compatibility, testing and installation, purchase and contract procedure, trained medical staff, on the proper use of the equipment and operating instructions. Maintenance job planning, preventive maintenance, maintenance budgeting, contract maintenance.

UNIT IV LOGISTIC SUPPORT & RELIABILITY**9**

Maintenance equipment and Tools, failure analysis, spare parts, and maintenance materials. Reliability fundamentals.

UNIT V EMI IN HOSPITAL EQUIPMENT**9**

Principles of EMI, computation of EMI, Method of suppressing and isolating the unit from interference.

COURSE OUTCOMES:

On completion of this course the student will be able to:

CO1: Discuss the basics of health organization

CO2: Explain the various national health policies

CO3: Perform equipment installation, service & calibration needs and planning activities at health care centres

CO4: Repair methods for Material handling equipment

CO5: Minimizing equipment failures and increasing patient safety

BM4007

HOSPITAL WASTE MANAGEMENT

L T P C

3 0 0 3

COURSE OBJECTIVES:

- To understand the significance of infections, biomedical waste and its proper disposal.
- To teach the students about the controls applied to waste management.

UNIT I INTRODUCTION 9

Medical waste stream, different types of medical waste, its source of origin. Waste management elements – categories of bio-medical waste, different colour codes and symbols –rules and regulation includes state and national level bodies.

UNIT II PRINCIPLES OF STERILIZATION 9

Disease and its mode of transmission - Disinfection methods- concept and mechanism – physical sterilization and chemical sterilization – Large scale autoclave - Microwave (Non-burn treatment technology).

UNIT III DISPOSAL OF WASTE 9

Disposal methods – Incinerator and its types-hazardous waste, radioactive waste, liquid waste destruction – landfill and rules governing landfill.

UNIT IV CONTROLS APPLIED TO WASTE MANAGEMENT 9

Air pollution and emission control, rules governing pollution, instrumentation and monitoring, emission filters and its types, crematories- gas emission control device. Case studies related to air pollution.

UNIT V ENVIRONMENTAL SAFETY, RISKS & PUBLIC ISSUES 9

Risk management in hospitals - Environment issues in hospitals - Risk analysis

COURSE OUTCOMES:

On completion of this course the student will be able to:

- CO1:** Get a clear understanding of regulations framed for waste management
CO2: Understand the significance of infections and the transmission of diseases
CO3: Acquire knowledge on proper disposal of waste
CO4: Acquire a conceptual idea about the controls applied to waste management.
CO5: Gain sufficient knowledge on Risk analysis and management of public issues

TOTAL:45 PERIODS

COURSE OUTCOMES:**On completion of this course the student will be able to:**

CO1: Understand the scope of Need and significance of quality practices in health care industry

CO2: Discuss the system of regulatory measures and accreditation

CO3: Differentiate the level of safety and security measures and significance

CO4: Understand the concepts of Electrical and Fire Safety Hazards Mitigations

CO5: Understand the assessing quality practices using tools

BM4071**GENETIC ALGORITHMS AND FUZZY LOGICS****L T P C****3 0 0 3****COURSE OBJECTIVES:**

- To provide basic knowledge about the fundamentals of genetic algorithm
- To familiarize with the ant colony and particle swarm optimization techniques
- To learn the basics of fuzzy logic
- To enrich the students knowledge with fuzzy systems and its applications
- To learn the neuro fuzzy system and fuzzy logic controller

UNIT I GENETIC ALGORITHMS**9**

Introduction, Building block hypothesis, working principle, Basic operators and Terminologies like individual, gene, encoding, fitness function and reproduction, Genetic modeling:,Significance of Genetic operators, Inheritance operator, cross over, inversion & deletion,mutation operator, Bitwise operator, GA optimization problems, Applications of GA.

UNIT II OTHER OPTIMIZATION TECHNIQUES 9

Ant Colony Optimization: Introduction – From real to artificial ants- Theoretical considerations – Particle Swarm Optimization:-Introduction – Principles of bird flocking and fish schooling – Evolution of PSO – Operating principles – PSO Algorithm

UNIT III FUZZY LOGIC 9

Introduction to Fuzzy Logic, Classical and Fuzzy Sets, Membership Function, Operations on Fuzzy Sets, Fuzzy Arithmetic, Compliment, Intersections, Unions, Fuzzy Relation

UNIT IV FUZZY RULE BASED SYSTEM 9

Linguistic Hedges. Rule based system, Fuzzification and Defuzzification, Fuzzy inference systems - Mamdani and Sugeno model, Fuzzy clustering- fuzzy c- means algorithm- fuzzy control method- fuzzy decision making.

UNIT V ADVANCES AND APPLICATIONS 9

Case studies: Fuzzy logic control of Blood pressure during Anaesthesia, Fuzzy logic application to Biosignals and medical Image processing , Adaptive fuzzy system. Introduction to Neuro-fuzzy logic

COURSE OUTCOMES:

CO1: Apprehend the principles of genetic algorithms as well as techniques used in its implementation.

CO2: Apply the optimization algorithms for real time applications

CO3: Apply fuzzy logic and reasoning to handle uncertainty and solve engineering problems.

CO4: Design a fuzzy rule based system for biomedical application

CO5: Apply the fuzzy controller for resulting the blood pressure

Avg	1.4		1	2.6	2.4	1

COURSE OBJECTIVES:

- To understand basics of tissue engineering
- To learn basics of cell mechanics in tissue engineering
- To know the importance of biomaterials in tissue engineering:
- To understand the importance of stem cell in tissue engineering
- To learn the tissue culture applications in human healthcare

UNIT I INTRODUCTION TO TISSUE ENGINEERING 9

History and scope of tissue engineering – Scientific and Social Challenges - Structure and organization of Tissues – Development of Tissue – Cell and Extracellular matrix interaction – Morphogenesis and Tissue Engineering – Cell Determination and Differentiation

UNIT II FUNDAMENTALS OF CELL MECHANISMS 9

.Cell adhesion, Cell migration and Cell aggregation – Cell growth and Cell cycle. Cellular Interactions: Cell – Cell and Cell – Matrix. Control of Cell migration in Tissue Engineering –Cell delivery and Recirculation – Cell Culture in vitro – 3D culture in Tissue Engineering - In vitro Organogenesis - Cell transplantation.

UNIT III BIOMATERIALS IN TISSUE ENGINEERING 9

Biological vs Nonbiological materials – Extra Cellular Matrix – Collagen, Chitin & Degradable and Nondegradable materials – Polymer, Ceramics and Metals – Cell interaction with different materials – Scaffolds - Control releaser agents in Tissue Engineering – Cell interaction with suspension and gels – Tissue response to implants

UNIT IV STEM CELLS IN TISSUE ENGINEERING 9

Introduction of Stem cells – Hemopoetic Stem cells - Embryonic Stem cells - Adult stem cells – Cancer Stem cells – Cord Blood cells – Induced Pluripotent Stem cells - Stem cell identification - Surface markers & FACS analysis – Differentiation, Dedifferentiation and Immortalization – Application of stem cells in tissue Engineering.

UNIT V TISSUE ENGINEERING APPLICATIONS 9

Synthetic components – Artificial organs – Joints and dental prostheses - Connective Tissue Engineering – Cardiovascular Tissue Engineering – Neural Tissue Engineering - Cell and Drug Delivery systems

TOTAL : 45 PERIODS**COURSE OUTCOMES:**

CO1: Explain the mechanisms involved in interaction of different materials with cells and tissues

CO2: Explain different methods involved in characterization and preparation of biomaterials in tissue engineering

CO3: Apply the knowledge in creating new models in drug delivery systems using synthetic and natural scaffolds

CO4: Explain different types of stem cells and its application in tissue engineering

CO5: Develop new approaches to build new tissues using tissue engineering techniques

CO6: Define the applications of tissue engineering to healthcare

UNIT IV IOT: AN INTRODUCTION 9

Networked Embedded System types and overview, wireless communication standards-zigbee, Bluetooth & Wi-Fi. OSI & TCP/IP model in a nutshell. Introduction to the Internet and understand how internet works. Introduction to Smart Objects or Things. IOT- understand what IOT is and discuss its application in health-care systems- Patient Monitoring & diagnostics, Home healthcare & Personal care & Fitness.

UNIT V EMBEDDED WEB-SERVER & IOT CLOUD SERVICES 9
APPLICATION DESIGN & CASE STUDY

Embedded web server: Basic introduction, its importance and role in IOT. Design of a simple embedded web server: understand the HTTP & HTML basics Overview of different IOT Cloud Services.

Case Study1: Wireless Patient Monitor system

Case Study2: Wearable Fitness & Activity Monitor

Application Design: Design of IOT based pulse oximeter, block diagram, concepts of analog front end, signal process and Wi-Fi integration.

45 PERIODS

30 PERIODS

PRACTICAL EXERCISES:

LIST OF EXPERIMENTS

1. Code for Sensor interface: Temperature sensor, pressure sensor, Light sensor, IR sensor.[1]
2. Temperature sensor Interfacing using ARM processor [2]
3. Flashing of LEDs using ARM processor [3]
4. ADC/DAC Interfacing using ARM processor
5. EPROM Interfacing using ARM processor.
6. Study of basic image processing algorithm using Single board computers such as Raspberry Pi, Beagle Bone block etc

COURSE OUTCOMES:

Upon Completion of the course, the students should be able to:

CO1: Develop hardware and software for ARM processor.

CO2: Understand ARM processor and Building Blocks of Embedded Systems

CO3: Acquire Knowledge on sensor interfacing with Arduino

CO4: Analyse various protocols for IoT,

CO5: Build various applications in healthcare using IOT based approach and substantiate the same with appropriate

TOTAL:75 PERIODS

MEDICAL INFORMATICS

L T P C

3 0 2 4

COURSE OBJECTIVES:

- To learn about operating systems and their uses
- To understand basics of medical informatics
- To study about databases and their types
- To learn about processing of data
- To study about recent trends in health informatics

UNIT I OPERATING SYSTEM, SEARCH ENGINE AND MEDICAL STANDARD 9

Introduction to Operating systems, Linux commands, File transfer protocols ftp and telnet – Search Engine – Online Medical Resources – Electronic Health Records - Network - Evolution of Medical Standards – IEEE 11073 - HL7 – DICOM – IRMA - LOINC – HIPPA

UNIT II INTRODUCTION TO MEDICAL INFORMATICS 9

Introduction –Medical Informatics– Health Informatics - Structure of Medical Informatics –Functional capabilities of Hospital Information System - On-line services and Off – line services - Dialogue with the computer

UNIT III DATABASE AND HEALTH INFORMATICS 9

Data management – data life cycle – database technology – interfaces and implementation – biological databases and their uses – Database management system models, Basics of Structured Query Language (SQL). Genome projects, Clinical informatics, Nursing informatics, Public health informatics

UNIT IV MEDICAL DATA STORAGE AND AUTOMATION 9

Representation of Data, Data modeling Techniques, Relational Hierarchical and network Approach, Normalization techniques for Data handling - Plug-in Data Acquisition and Control Boards – Data Acquisition using Serial Interface – Medical Data formats – Signal, Image and Video Formats – Medical Databases - Automation in clinical laboratories - Intelligent Laboratory Information System – PACS

UNIT V RECENT TRENDS IN MEDICAL INFORMATICS**9**

Medical Expert Systems, Virtual reality applications in medicine, Virtual Environment – Surgical simulation - Telemedicine – virtual Hospitals - Smart Medical Homes – Personalized e-health services – Biometrics - GRID and Cloud Computing in Medicine – Artificial Intelligence in health informatics

45 PERIODS**PRACTICAL EXERCISES:****30 PERIODS**

1. Computer and Internet basics
2. Operating systems – Linux and Windows Basics
3. PubMed search engine
4. Types of computer database
5. Typs of graphs
6. Retrivel of data from biological and medical database
7. Data handling and analysis using Excel

COURSE OUTCOMES:

CO1: Explain the function of hospital information systems

CO2: Explain basic concepts of artificial intelligence

CO3: Explain the various concepts of hospital management and information system

CO4: Explain the importance of medical record storage for easy access

CO5: Compare different medical standards

CO6: Explain the concepts of expert system

CO5	1	1	2			1
CO6	2	1	2			1

COURSE OBJECTIVES:

- To understand the fundamentals of Pattern recognition
- To impart knowledge on various clustering techniques
- To study about feature extraction and selection
- To explore different classification models
- To understand Fuzzy Pattern Classifiers and applications

UNIT I PATTERN CLASSIFIER 9

Overview of Pattern recognition – Discriminant functions – Supervised learning – Parametric estimation – Maximum Likelihood Estimation – Bayesian parameter Estimation – Problems with Bayes approach– Non Parametric techniques, Perceptron Algorithm-LMSE Algorithm- Pattern classification by distance functions – Minimum distance pattern classifier.

UNIT II CLUSTERING 9

Clustering Concept – Hierarchical Clustering Procedures – Partitional Clustering, k-means algorithm – Clustering of Large Data Sets – EM Algorithm – Grid Based Clustering– Density Based Clustering.

UNIT III FEATURE EXTRACTION AND SELECTION 9

Entropy Minimization – KL Transforms – Regression-Linear, Non-linear and Logistic, Prediction, Feature Selection through Functions Approximation – Binary Feature Selection

UNIT IV HIDDEN MARKOV MODELS AND SUPPORT VECTOR MACHINE 9

State Machines – Hidden Markov Models: Maximum Likelihood for the HMM, Forward-Backward Algorithm, Sum and Product Algorithm for the HMM, Extensions of the Hidden Markov Model – Support Vector Machines: Maximum Margin Classifiers, Relevance Vector Machines

UNIT V RECENT ADVANCES AND APPLICATIONS 9

Elementary Neural Network for Pattern Recognition, Fuzzy pattern classifier, Application of PR in image segmentation, CAD system in breast cancer detection, ECG signal classification, Fingerprint recognition, cell cytology classification

45 PERIODS

PRACTICAL EXERCISES:

30 PERIODS

1. Implementation of Image classification using Perceptron model in Matlab/python.
2. Implementation of Fuzzy pattern classifier in Matlab/OpenCV/python.
3. Implementation of Feature extraction using KL transform in Matlab/OpenCV/python.
4. Implementation of partitional clustering in Matlab/OpenCV/python.
5. Implementation of density based clustering in Matlab/OpenCV/ python
6. Implementation of Classification using SVM in Matlab/OpenCV/python.
7. Implementation of Classification using HMM in Matlab/OpenCV/python.
8. Implementation of Bayes classifier in Matlab/OpenCV/python.
9. Implementation of Classification using Neural Networks in Matlab/OpenCV/python.
10. Implementation of image segmentation in Matlab/OpenCV/python

COURSE OUTCOMES:**On completion of this course the student will be able to:****CO1:** Perform classification using Bayes approach**CO2:** Implement clustering algorithms for classification**CO3:** Perform Feature extraction, feature reduction**CO4:** Apply HMM and SVM for real time applications**CO5:** Apply pattern recognition techniques for biosignal and medical image applications**TOTAL:75 PERIODS****REFERENCES**

BM4012**DATA ANALYTICS FOR HEALTHCARE TECHNOLOGIES****L T P C****3 0 2 4****COURSE OBJECTIVES:**

- To explore the various forms of electronic health care information.
- To learn the techniques adopted to analyse health care data.
- To understand the natural language based analytics
- To understand the predictive models for clinical data
- To gain knowledge health care analytics and its applications

UNIT I INTRODUCTION**9**

Introduction to Healthcare Data Analytics- Electronic Health Records–Components of EHR- Coding Systems- Benefits of EHR- Barrier to Adopting EHR-Challenges- Phenotyping Algorithms.

UNIT II DATA ANALYSIS 9
Biomedical Image Analysis- Mining of Sensor Data in Healthcare- Biomedical Signal Analysis- Genomic Data Analysis for Personalized Medicine

UNIT III ANALYTICS 9
Natural Language Processing and Data Mining for Clinical Text- Mining the Biomedical -Social Media Analytics for Healthcare.

UNIT IV ADVANCED ANALYTICS 9
Advanced Data Analytics for Healthcare– Review of Clinical Prediction Models- Temporal Data Mining for Healthcare Data- Visual Analytics for Healthcare- Predictive Models for Integrating Clinical and Genomic Data- Information Retrieval for Healthcare- Privacy- Preserving Data Publishing Methods in Healthcare

UNIT V APPLICATIONS 9
Applications and Practical Systems for Healthcare– Data Analytics for Pervasive Health- Fraud Detection in Healthcare- Data Analytics for Pharmaceutical Discoveries- Clinical Decision Support Systems- Computer-Assisted Medical Image Analysis Systems- Mobile Imaging and Analytics for Biomedical Data.

**TOTAL PERIODS: 45
30 PERIODS**

PRACTICAL EXERCISES:

1. Study of open source software
2. Data storage and retrieval on software
3. Creation of electronic patient record
4. Web page creation using HTML
5. Preprocessing the given dataset
6. User interface design
7. Univariate and Multivariate regression
- 8 Classification techniques

COURSE OUTCOMES:

- CO1:** Understand about health care analytics and benefits of Electronic health records.
CO2: Understand about Bio medical image analysis
CO3: Understand about Natural language processing and biomedical mining
CO4: Understand about information retrieval for health care.
CO5: Demonstrate about applications and practical systems for health care.

TOTAL: 75 PERIODS

MU4253	MIXED REALITY	L T P C 3 0 2 4
OBJECTIVES:		
<ul style="list-style-type: none"> To study about Fundamental Concept and Components of Virtual Reality To study about Interactive Techniques in Virtual Reality To study about Visual Computation in Virtual Reality To study about Augmented and Mixed Reality and Its Applications To know about I/O Interfaces and its functions. 		
UNIT I	INTRODUCTION TO VIRTUAL REALITY	9
<p>Introduction, Fundamental Concept and Components of Virtual Reality. Primary Features and Present Development on Virtual Reality. Computer graphics, Real time computer graphics, Flight Simulation, Virtual environment requirement, benefits of virtual reality, Historical development of VR, Scientific Landmark 3D Computer Graphics: Introduction, The Virtual world space, positioning the virtual observer, the perspective projection, human vision, stereo perspective projection, 3D clipping, Colour theory, Simple 3D modelling, Illumination models, Reflection models, Shading algorithms, Radiosity, Hidden Surface Removal, Realism Stereographic image.</p> <p>Suggested Activities:</p> <ul style="list-style-type: none"> Flipped classroom on uses of MR applications. Videos – Experience the virtual reality effect. Assignment on comparison of VR with traditional multimedia applications. <p>Suggested Evaluation Methods:</p> <ul style="list-style-type: none"> Tutorial – Applications of MR. Quizzes on the displayed video and the special effects 		
UNIT II	INTERACTIVE TECHNIQUES IN VIRTUAL REALITY	9
<p>Introduction, from 2D to 3D, 3D spaces curves, 3D boundary representation Geometrical Transformations: Introduction, Frames of reference, Modeling transformations, Instances, Picking, Flying, Scaling the VE, Collision detection Generic VR system: Introduction, Virtual environment, Computer environment, VR technology, Model of interaction, VR Systems.</p> <p>Suggested Activities:</p> <ul style="list-style-type: none"> Flipped classroom on modeling three dimensional objects. External learning – Collision detection algorithms. Practical – Creating three dimensional models. 		

Suggested Evaluation Methods:		
<ul style="list-style-type: none"> • Tutorial – Three dimensional modeling techniques. • Brainstorming session on collision detection algorithms. • Demonstration of three dimensional scene creation. 		
UNIT III	VISUAL COMPUTATION IN VIRTUAL REALITY	9
<p>Animating the Virtual Environment: Introduction, The dynamics of numbers, Linear and Nonlinear interpolation, the animation of objects, linear and non-linear translation, shape & object inbetweening, free from deformation, particle system. Physical Simulation: Introduction, Objects falling in a gravitational field, Rotating wheels, Elastic collisions, projectiles, simple pendulum, springs, Flight dynamics of an aircraft.</p> <p>Suggested Activities:</p> <ul style="list-style-type: none"> • External learning – Different types of programming toolkits and Learn different types of available VR applications. • Practical – Create VR scenes using any toolkit and develop applications. <p>Suggested Evaluation Methods:</p> <ul style="list-style-type: none"> • Tutorial – VR tool comparison. • Brainstorming session on tools and technologies used in VR. • Demonstration of the created VR applications. 		
UNIT IV	AUGMENTED AND MIXED REALITY	9
<p>Taxonomy, technology and features of augmented reality, difference between AR and VR, Challenges with AR, AR systems and functionality, Augmented reality methods, visualization techniques for augmented reality, wireless displays in educational augmented reality applications, mobile projection interfaces, marker-less tracking for augmented reality, enhancing interactivity in AR environments, evaluating AR systems</p> <p>Suggested Activities:</p> <ul style="list-style-type: none"> • External learning - AR Systems <p>Suggested Evaluation Methods:</p> <ul style="list-style-type: none"> • Brainstorming session different AR systems and environments. 		
UNIT V	I/O INTERFACE IN VR & APPLICATION OF VR	9
<p>Human factors: Introduction, the eye, the ear, the somatic senses. VR Hardware: Introduction, sensor hardware, Head-coupled displays, Acoustic hardware, Integrated VR systems. VR Software: Introduction, Modeling virtual world, Physical simulation, VR toolkits, Introduction to VRML, Input -- Tracker, Sensor, Digitalglobe, Movement Capture, Video-based Input, 3D Menus & 3DScanner etc. Output -- Visual /Auditory / Haptic Devices. VR Technology in Film & TV Production. VR Technology in Physical Exercises and Games. Demonstration of Digital Entertainment by VR.</p> <p>Suggested Activities:</p> <ul style="list-style-type: none"> • External learning – Different types of sensing and tracking devices for creating mixed reality environments. • Practical – Create MR scenes using any toolkit and develop applications. <p>Suggested Evaluation Methods:</p> <ul style="list-style-type: none"> • Tutorial – Mobile Interface Design. • Brainstorming session on wearable computing devices and games design. • Demonstration and evaluation of the developed MR application. 		
OUTCOMES:		
CO1: Understand the Fundamental Concept and Components of Virtual Reality		
CO2: Able to know the Interactive Techniques in Virtual Reality		
CO3: Can know about Visual Computation in Virtual Reality		
CO4: Able to know the concepts of Augmented and Mixed Reality and Its Applications		

CO5: Know about I/O Interfaces and its functions.	
TOTAL: 45 PERIODS	
PRACTICALS:	30 PERIODS
<ol style="list-style-type: none"> 1. Study of tools like Unity, Maya, 3DS MAX, AR toolkit, Vuforia and Blender. 2. Use the primitive objects and apply various projection methods by handling the camera. 3. Download objects from asset stores and apply various lighting and shading effects. 4. Model three dimensional objects using various modeling techniques and apply textures over them. 5. Create three dimensional realistic scenes and develop simple virtual reality enabled mobile applications which have limited interactivity. 6. Add audio and text special effects to the developed application. 7. Develop VR enabled applications using motion trackers and sensors incorporating full haptic interactivity. 8. Develop AR enabled applications with interactivity like E learning environment, Virtual walkthroughs and visualization of historic places. 9. Develop MR enabled simple applications like human anatomy visualization, DNA/RNA structure visualization and surgery simulation. 10. Develop simple MR enabled gaming applications. 	
TOTAL: 75 PERIODS

ENGLISH FOR RESEARCH PAPER WRITING

L T P C
2 0 0 0

COURSE OBJECTIVES:

- Teach how to improve writing skills and level of readability
- Tell about what to write in each section
- Summarize the skills needed when writing a Title
- Infer the skills needed when writing the Conclusion
- Ensure the quality of paper at very first-time submission

UNIT I INTRODUCTION TO RESEARCH PAPER WRITING

6

Planning and Preparation, Word Order, Breaking up long sentences, Structuring Paragraphs and Sentences, Being Concise and Removing Redundancy, Avoiding Ambiguity and Vagueness

UNIT II PRESENTATION SKILLS

6

Clarifying Who Did What, Highlighting Your Findings, Hedging and Criticizing, Paraphrasing and Plagiarism, Sections of a Paper, Abstracts, Introduction

UNIT III TITLE WRITING SKILLS

6

Key skills are needed when writing a Title, key skills are needed when writing an Abstract, key skills are needed when writing an Introduction, skills needed when writing a Review of the Literature, Methods, Results, Discussion, Conclusions, The Final Check

UNIT IV RESULT WRITING SKILLS

6

Skills are needed when writing the Methods, skills needed when writing the Results, skills are needed when writing the Discussion, skills are needed when writing the Conclusions

UNIT V VERIFICATION SKILLS

6

Useful phrases, checking Plagiarism, how to ensure paper is as good as it could possibly be the first- time submission

TOTAL: 30 PERIODS

COURSE OUTCOMES:

CO1 –Understand that how to improve your writing skills and level of readability

CO2 – Learn about what to write in each section

CO3 – Understand the skills needed when writing a Title

CO4 – Understand the skills needed when writing the Conclusion

CO5 – Ensure the good quality of paper at very first-time submission

3. Goldbort R Writing for Science, Yale University Press (available on Google Books) 2006
4. Highman N, Handbook of Writing for the Mathematical Sciences, SIAM. Highman's book 1998.

COURSE OBJECTIVES:

- Summarize basics of disaster
- Explain a critical understanding of key concepts in disaster risk reduction and humanitarian response.
- Illustrate disaster risk reduction and humanitarian response policy and practice from multiple perspectives.
- Describe an understanding of standards of humanitarian response and practical relevance in specific types of disasters and conflict situations.
- Develop the strengths and weaknesses of disaster management approaches

UNIT I INTRODUCTION**6**

Disaster: Definition, Factors and Significance; Difference between Hazard And Disaster; Natural and Manmade Disasters: Difference, Nature, Types and Magnitude.

UNIT II REPERCUSSIONS OF DISASTERS AND HAZARDS**6**

Economic Damage, Loss of Human and Animal Life, Destruction Of Ecosystem. Natural Disasters: Earthquakes, Volcanisms, Cyclones, Tsunamis, Floods, Droughts And Famines, Landslides And Avalanches, Man-made disaster: Nuclear Reactor Meltdown, Industrial Accidents, Oil Slicks And Spills, Outbreaks Of Disease And Epidemics, War And Conflicts.

UNIT III DISASTER PRONE AREAS IN INDIA**6**

Study of Seismic Zones; Areas Prone To Floods and Droughts, Landslides And Avalanches; Areas Prone To Cyclonic and Coastal Hazards with Special Reference To Tsunami; Post-Disaster Diseases and Epidemics

UNIT IV DISASTER PREPAREDNESS AND MANAGEMENT**6**

Preparedness: Monitoring Of Phenomena Triggering a Disaster or Hazard; Evaluation of Risk: Application of Remote Sensing, Data from Meteorological And Other Agencies, Media Reports: Governmental and Community Preparedness.

UNIT V RISK ASSESSMENT**6**

Disaster Risk: Concept and Elements, Disaster Risk Reduction, Global and National Disaster Risk Situation. Techniques of Risk Assessment, Global Co-Operation in Risk Assessment and Warning, People's Participation in Risk Assessment. Strategies for Survival

TOTAL : 30 PERIODS**COURSE OUTCOMES:**

CO1: Ability to summarize basics of disaster

CO2: Ability to explain a critical understanding of key concepts in disaster risk reduction and humanitarian response.

CO3: Ability to illustrate disaster risk reduction and humanitarian response policy and practice from multiple perspectives.

CO4: Ability to describe an understanding of standards of humanitarian response and practical relevance in specific types of disasters and conflict situations.

CO5: Ability to develop the strengths and weaknesses of disaster management approaches

CONSTITUTION OF INDIA

L T P C
2 0 0 0

COURSE OBJECTIVES:

Students will be able to:

- Understand the premises informing the twin themes of liberty and freedom from a civil rights perspective.
- To address the growth of Indian opinion regarding modern Indian intellectuals’ constitutional
- Role and entitlement to civil and economic rights as well as the emergence nation hood in the early years of Indian nationalism.
- To address the role of socialism in India after the commencement of the Bolshevik Revolution in 1917 and its impact on the initial drafting of the Indian Constitution.

UNIT I HISTORY OF MAKING OF THE INDIAN CONSTITUTION

History, Drafting Committee, (Composition & Working)

UNIT II PHILOSOPHY OF THE INDIAN CONSTITUTION

Preamble, Salient Features

UNIT III CONTOURS OF CONSTITUTIONAL RIGHTS AND DUTIES

Fundamental Rights, Right to Equality, Right to Freedom, Right against Exploitation, Right to Freedom of Religion, Cultural and Educational Rights, Right to Constitutional Remedies, Directive Principles of State Policy, Fundamental Duties.

UNIT IV ORGANS OF GOVERNANCE

Parliament, Composition, Qualifications and Disqualifications, Powers and Functions, Executive, President, Governor, Council of Ministers, Judiciary, Appointment and Transfer of Judges, Qualifications, Powers and Functions.

UNIT V LOCAL ADMINISTRATION

District’s Administration head: Role and Importance, □ Municipalities: Introduction, Mayor and role of Elected Representative, CEO, Municipal Corporation. Pachayati raj: Introduction, PRI: Zila Pachayat. Elected officials and their roles, CEO Zila Pachayat: Position and role. Block level: Organizational Hierarchy (Different departments), Village level: Role of Elected and Appointed officials, Importance of grass root democracy.

UNIT VI ELECTION COMMISSION

Election Commission: Role and Functioning. Chief Election Commissioner and Election Commissioners - Institute and Bodies for the welfare of SC/ST/OBC and women.

TOTAL: 30 PERIODS

COURSE OUTCOMES:

Students will be able to:

- Discuss the growth of the demand for civil rights in India for the bulk of Indians before the arrival of Gandhi in Indian politics.
- Discuss the intellectual origins of the framework of argument that informed the conceptualization
- of social reforms leading to revolution in India.
- Discuss the circumstances surrounding the foundation of the Congress Socialist Party[CSP] under the leadership of Jawaharlal Nehru and the eventual failure of the proposal of direct elections through adult suffrage in the Indian Constitution.
- Discuss the passage of the Hindu Code Bill of 1956.

SUGGESTED READING

1. The Constitution of India,1950(Bare Act),Government Publication.
2. Dr.S.N.Busi, Dr.B. R.Ambedkar framing of Indian Constitution,1st Edition, 2015.
3. M.P. Jain, Indian Constitution Law, 7th Edn., Lexis Nexis,2014.
4. D.D. Basu, Introduction to the Constitution of India, Lexis Nexis, 2015.

AX4094

நற்றமிழ் இலக்கியம்

L T P C

2 0 0 0

UNIT I

சங்க இலக்கியம்

6

1.தமிழின் துவக்க நூல் தொல்காப்பியம்

- எழுத்து, சொல், பொருள்

2.அகநானூறு (82)

- இயற்கை இன்னிசை அரங்கம்

3.குறிஞ்சிப் பாட்டின் மலர் க்காட்சி

4.புறநானூறு (95,195)

- போரை நிறுத்திய ஒளவையார்

UNIT II

அறநெறித் தமிழ்

6

1. அறநெறி வகுத்த திருவள்ளுவர்

- அறம் வலியுறுத்தல், அன்புடைமை, ஒப்புரவறிதல், ஈகை, புகழ்

2. பிற அறநூல்கள் - இலக்கிய மருந்து

- ஏலாதி, சிறுபஞ்சமூலம், திரிகடுகம், ஆசாரக்கோவை (தூய்மையை வலியுறுத்தும் நூல்)

UNIT III

இரட்டைக் காப்பியங்கள்

6

1. கண்ணகியின் புரட்சி

- சிலப்பதிகார வழக்குரை காதை

2. சமூகசேவை இலக்கியம் மணிமேகலை

- சிறைக்கோட்டம் அறக்கோட்டமாகிய காதை

UNIT IV

அருள்நெறித் தமிழ்

6

1. சிறுபாணாற்றுப்படை

- பாரி முல்லைக்குத் தேர் கொடுத்தது, பேகன் மயிலுக்குப்

போர்வைகொடுத்தது, அதியமான் ஓளவைக்கு நெல்லிக்கனி
கொடுத்தது, அரசர் பண்புகள்

2. நற்றிணை

- அன்னைக்குரிய புன்னை சிறப்பு

3. திருமந்திரம் (617, 618)

- இயமம் நியமம் விதிகள்

4. தர்மச் சாலையை நிறுவிய வள்ளலார்

5. புறநானூறு

- சிறுவனே வள்ளலானான்

6. அகநானூறு (4) - வண்டு

நற்றிணை (11) - நண்டு

கலித்தொகை (11) - யானை, புறா

ஐந்திணை 50 (27) - மான்

ஆகியவை பற்றிய செய்திகள்

UNIT V

நவீன தமிழ் இலக்கியம்

6

1. உரைநடைத் தமிழ்,

- தமிழின் முதல் புதினம்,

- தமிழின் முதல் சிறுகதை,

- கட்டுரை இலக்கியம்,

- பயண இலக்கியம்,

- நாடகம்,

2. நாட்டு விடுதலை போராட்டமும் தமிழ் இலக்கியமும்,

3. சமுதாய விடுதலையும் தமிழ் இலக்கியமும்,

4. பெண் விடுதலையும் விளிம்பு நிலையினரின் மேம்பாட்டில் தமிழ்
இலக்கியமும்,

5. அறிவியல் தமிழ்,

6. இணையத்தில் தமிழ்,

7. சுற்றுச்சூழல் மேம்பாட்டில் தமிழ் இலக்கியம்.

TOTAL : 30 PERIODS

தமிழ் இலக்கிய வெளியீடுகள் / புத்தகங்கள்

1. தமிழ் இணைய கல்விக்கழகம் (Tamil Virtual University)

- www.tamilvu.org

2. தமிழ் விக்கிப்பீடியா (Tamil Wikipedia)

- <https://ta.wikipedia.org>

3. தர்மபுர ஆதீன வெளியீடு

4. வாழ்வியல் களஞ்சியம்

- தமிழ்ப் பல்கலைக்கழகம், தஞ்சாவூர்

5. தமிழ்கலைக் களஞ்சியம்

- தமிழ் வளர்ச்சித்துறை (thamilvalarchithurai.com)

6. அறிவியல் களஞ்சியம்

- தமிழ்ப் பல்கலைக்கழகம், தஞ்சாவூர்
